By this token millions of men are being misled today by zealous agitators, misguided, but often well-meaning "reformers" and irresponsible and selfish demagogues. This is the reason why so largely throughout the world, talk has replaced work; why the "soap box" has been substituted for the pulpit, the "ouiya board" for the Bible; selfishness and avarice for the Golden Rule; fad and fancy for fact and principle; and why restless men in search of immediate emancipation from imagined evils are seeking to undermine the very institutions which constitute the only permanent safeguards to the liberties which they already possess.

Someone has appropriately, and in the following picturesque language, analyzed our fundamental industrial trouble to-day:

"Too many diamonds and not enough alarm clocks; too many silk shirts and not enough blue flannel ones; too much decolete and not enough aprons; too many satin upholstered limousines and not enough cows; too many consumers and not enough producers; too much oil stock and not enough savings accounts; too much 'class consciousness' and too little plain democracy and love of humanity; too much of the spirit of 'get while the getting is good' and not enough old-fashioned Christianity; too much of the discontent that finds outlet in mere complaining and too little real effort to remedy wrong conditions."

And yet men talk about working and do not work. They talk about production and do not produce. They talk about reducing the high cost of living and they do not do the only thing which can reduce it.

The Cause of High Prices

The high cost of living comes from our consuming more than we produce—nothing else. The longer we, as a nation, continue to play hide and seek with the facts and rely on legislation and talk instead of work and sweat, to remedy the situation of which we all complain, the shorter will become the supply of commodi-

ties, the higher will go the high cost of living and the end will be worse than the beginning.

It is perhaps scarcely necessary to review the means which have recently been devised throughout the world as substitutes for work. The ingenuity of the agitator, the so-called "reformer" or of the "bolshevik" have found striking expression in the variety of methods by which they would spread a veneer of apparent soundness over an industrial and financial situation that is fundamentally unsound.

Witness, for instance, the inflation of money and the world's credit structures; or the general strike; or the sympathetic strike; or government price-fixing; or public control of the processes of industry. We have had a lot of each of these during the past year or more. None of them have worked. None of them have proved to be effective substitutes for more production. Monetary inflation has increased so that a dollar to-day is worth in terms of the pre-war dollar about 40 cents when spent for raw material and unfinished products and about 50 cents when spent for the things we eat and wear and live in.

The general strike is discredited as futile and as destructive of the very interests it is designed to promote. The sympathetic strike is in disfavor even in the circles of organized labor, as it has always been among the citizens generally. Strikes, generally speaking, tend to defeat their own ends. Government price-fixing has, on the whole, so much interfered with the ordinary processes of the industries affected that production has languished still further. This is one of the reasons why we are to-day paying 20 to 25 cents for sugar instead of from 10 to 14 cents. The discouragement to sugar enterprises in the West Indies, especially in Cuba, incident to the administration of the duties of the Federal Sugar Equalization Board during the war and thereafter is now having its effect. The public pays. It always does.

People Must Have Domiciles

The Foreign Exchanges are distorted and erratic. In England, for example, the government, during the war and for some time thereafter, stabilized sterling exchange on the United States by arbitrarily holding it at a nearly normal level—doing so at the expense of the British taxpayer. It thereby encouraged British industries to buy more goods from the United States when the balance of trade was already so heavily set against them.

But even governments cannot forever make "something out of nothing." Eventually Great Britain took her hands off the exchanges. The balance of trade and the depreciation of British domestic currency promptly caused so great a decline in the exchanges that now Great Britain will not buy anything from us that she can humanly do without.

Thus has ever been the story of government control of industries. Each measure of control is by so much an interference with the normal activities of industry. Industry, whether under public regulation, operation, or ownership, must in the long run respond to the same forces to which industry under private enterprise responds. The government cannot make something for nothing any more than we can as individuals. Facts are facts. Economic law is sure to prevail in the end over every effort to ignore it or violate it.

When there are not enough things to go around, and people want them and can and will pay for them, prices are going up and stay up until one or more of three things shall have happened:

First, that production is so increased that there shall be enough to go around.

Second, that the public demand for the commodities declines.

Third, that people have no money with which to buy.

The construction industries are now witnessing one of the most extraordinary price situations in their recent history. The housing shortage has been accumulated throughout the years of war when non-war construction was considered by the government to be non-essential and therefore to be discouraged.

During the same time the government, pursuant to a military policy which, under the circumstances was necessary, drew from the construction industries and the industries producing building material, their labor, their equipment, their transportation facilities. With one arm the government was damming up the demand. With the other arm it was reducing the industries' capacity to produce. When

the dam was lifted an abnormally great demand for building material was faced generally with a short supply and a reduced capacity to increase it.

What has happened is the only thing that could have been reasonably expected to happen. Men have to have some place to live in. Most of them, as heretofore, prefer houses to tents and until the people have some place to live, that which we now see is bound to continue. The public pays. It always does. This is one of the prices of war.

Expedients of all kinds are being tried to correct this situation. But without avail. There is no remedy except more production. There is no short-cut. There is no way to get more production except by work. There is no effective substitute for work.

Calling another man a "profiteer" may give one some spiritual satisfaction, but it does not reduce the prices nor increase the supply of commodities. Talk is cheap. The word "profiteer" slips smoothly from the tongue. But it does not mean anything. We have heard continuously about the "profiteers." But we have never seen one. We have read about them—in the newspaper where other gaunt spectres stalk stealthily. But no one knows a "profiteer" on sight. With all our glib talk we have yet to hear a definition of what constitutes the difference between a "profiteer" and any other man who sells things for what they are worth.

I am in favor of the highest ideals in the conduct of business; of equal chance for all and special opportunity—for no one. But I am in favor of the citizen selling what he has to sell at what it is worth. And I am in favor of having its worth determined to-day just as it was determined six years ago—before the war—by the unrepealable law of supply and demand. I am in favor of ourselves and all others facing the facts as they are, not as we perhaps would wish to have them. For artificial interference by the government with the action and reaction of universal economic laws only adds to the burden of the taxpayers and at best it only postpones the evil day of reckoning, which, when it comes, is more evil and lasts longer. Efforts to repeal unrepealable laws can and frequently do produce temporary results. In war, when time is of the essence, such action is justifiable but not in time of peace, for such laws will not stay repealed. Nations, like individuals, cannot "eat their cake and have it, too." If they try to do both, the public pays—and pays dearly. And yet to-day the government of the United States is trying, by prosecution, to force lower prices for commodities. Thus with one hand it tends to prevent. Prosecution, under some conditions is necessary, is in the public interest; and it may bring about a more just distribution of commodities, but prosecution has never stimulated an increase in production. The Bible says to the giver, "Let not thy right hand know what thy left hand doeth." This precept is having surely a most singular acceptance and use by the government to-day. But this is the price that we, as citizens, pay for our chosen form and method of government and all things considered the price is cheap.

Plain Work is Only Remedy

It will be at best a long time, probably, before the production of useful commodities throughout the world will return to normal. Millions of misguided men, bent on revolution, will probably continue to try to "get something for nothing" until discouragement and privation shall have convinced them that their imagined formula for work emancipation will not work; until the intention to earn a good wage becomes as strong as the desire to have one; until less attention shall be given by men to seeing how little time they can work and greater attention be given by men to seeing how much they can produce; and until men throughout the world shall have come to know that the higher, better and happier life which all men desire and hope for will be permanently achieved only through the orderly processes of religion, education and good government.

We deplore the national and world-wide inflation and its perils. But we cannot help it, except by the gradual and orderly processes of increasing our production. Facts are facts. We must reckon with them as they are, as long as they exist and until we, in conjunction with other organized forces in industry and commerce, gradually and in an orderly way, shall have given normal conditions a chance to re-establish themselves.

But we must not ignore the economic conditions which prevail or the perils which they threaten. Under our federal banking system, the Federal Reserve Board and the Federal Reserve Banks have substantially to-day the power to increase the existing inflation or to bring about deflation of our already overstretched credits. They can encourage construction enterprise by diverting capital and credit to it. Or they can divert their credits to other enterprises, less necessary in the public interest. They can make inflation or deflation rapid or gradual as they choose. But further inflation, either fast or slow, will only make more acute the peril of partial or complete financial collapse. Rapid deflation on the other hand would almost certainly cause industrial crisis and depression. Gradual and orderly deflation appears to be the only safe course—a course to

which, fortunately, the Federal Reserve Board seems to be committed.

There are two things that God-fearing and liberty-loving American citizens are to-day earnestly trying to revive: First, on the part of all industries and on the part of all agencies of the public, respect for the Constitution of the United States, and second, on the part of all persons, a desire to get what they want by working for it instead of by trying to take it away from somebody else. If there is one thing that in the long run will promote production it is the assurance that every citizen shall be permitted to possess and enjoy everything that he can honestly earn.

Wealth and Welfare of Nation

The wealth and welfare of a nation are no greater than the combined wealth and welfare of the individuals who constitute the nation. If the productive facilities of the country are not fully or wisely utilized or if they be idle—the farms, the factories, the railroads, the mills, the stores, the schools and the colleges—then are we as individuals the sufferers. The public pays. It always does. That is the fact of which people complain, but which they have not yet sought, with sufficiently continuity of purpose, to remedy.

There is no decisive remedy for this situation except more work, not only by those whom we employ but by ourselves. Many individual citizens and many groups of citizens have been and are still sitting around on the middle part of their anatomy, blandly waiting for congress to legislate the country into prosperity, happiness and plenty.

It may be that the return to normal conditions in industry will not come until men who now may take or leave a job, as they please, are forced by necessity to hunt for employment. If the "bread line" is to be the only effective way of bringing us back to our senses let us have the "bread line" quick, and while the bread can still be made of wheat.

Public education, and the setting by us as well as by others of a good example to those who, to-day, in ignorance, are following the treacherous advice of labor and political demagogues, is the only practicable way of meeting this great public problem. Our banks can help. Our schools and colleges can help. Our churches and our legislatures can help. Our trade associations and our trade unions, if they want to, can help. But there will be no lasting settlement of the industrial trouble that to-day afflicts this nation, until its citizens quit their extravagance and irresponsible speculation; stop their spree of indiscriminate buying of things they don't need. Remember and observe the Golden Rule and "get back to the constitution and get back to work."

Wisconsin Has Lady Lumberjack

Forest County, Wisconsin, has a lady lumberjack. She is Miss Florence Tyrrel, who, with her mother, spent last winter at a logging camp near Newald. Miss Tyrrel skids logs, harnesses and cares for her team and, according to the old-time woodsmen, is capable of exceeding many modern day "jacks" when it comes to doing a full day's work.

Miss Tyrrell goes about her work in the timber attired in regulation lumberjack clothing, consisting of overalls, heavy mackinaw, big cap and mittens, and at first glance one would never suspect the wearer of this outfit to be a young lady. During the winter she drove four horses most of the time, and by her skill in handling the reins won the admiration of every teamster in camp.

Solving the Frazil Ice Problem

"Canada's Ice Problems and Their Solution" was the subject of an interesting address, delivered recently in Ottawa, by John Murphy, M.E.I.C. In the course of his remarks he said that the only large building in the Capital City, which was electrically lighted when he graduated from college was the House of Parliament. This electricity was supplied by steam power. Notwithstanding the fact that the enormous waterpower of the Chaudiere was not far away, there was no means of transmitting it. Frazil ice was the greatest force to be combatted in keeping the wheels of commerce turning. Methods of combatting it were demonstrated.

Mr. Murphy explained that when metal was surrounded by water which was below 30 degrees fahrenheit, the metal lost its heat, and the water turned to ice.

"After the ice formation once gets a start, it runs like fire, and, like fire, it should be prevented from starting," stated Mr. Murphy. To-day there was no necessity for allowing the temperature of water wheels in power houses getting below freezing point. This problem had been solved as long as twenty years ago, and if these discoveries were not utilized, the speaker had no sympathy with those afflicted.

"Keep the temperature one one-thousandth of a degree above freezing point if you would keep frazil from forming; ice will not stick to metal if it is kept at the most minutely conceivable part of a degree above freezing point," said Mr. Murphy.

How Lumber Values are Increasing

William Little, 101 The Boulevard, Westmount, Que., a widely-known lumberman, who, by voice and pen, has often been heard in the interest of conservation and scientific management of our forest resources, says in a recent letter to the press:

Sir,—In your issue of August 29, 1919, you were good enough to publish an article of mine taken from the columns of the "Canada Lumberman," containing a table of figures showing how the prices of the different qualities of white pine lumber increased in value in the Ottawa lumber district in the period from July 12, 1899, to July 1, 1919, showing a mean difference of \$52.50 per M. feet, board measure, on the first quality of white pine, and from \$10 to \$42 per M. feet on mill run spruce at the mills.

If I had waited till now to make the comparison in prices, I might have added at least \$100 per M. to the spread in white pine prices, and made the present value \$152.50, for although the Ottawa prices current for first quality white pine lumber are quoted at \$110 to \$125 per M. feet, the market prices of white pine in Toronto are now given for 2 x 8 and wider good siding at from \$180 to \$190 per M. feet, while the price in Boston for white pine uppers running from one inch to four inches in thickness, is quoted at from \$206 to \$246 per M.

Indeed, it looks as if our old familiar friend, the white pine, that was pronounced by Prof. Charles S. Sargent, of Harvard University, Boston, the eminent gentleman who compiled the timber statistics for the United States Census of 1880, to be "the most valuable timber tree in the North American forests," would soon overtake in price its quondam associate, the white oak, that is now skyrocketing somewhere between \$300 and \$400 per M., as may be seen in the table of prices following, showing the increase in value in various descriptions of hardwood lumber for the five months from November 4, 1919, to March 30, 1920.

The following, compiled from statistics of the "American Lumberman," Chicago, shows the lumber prices current for Cincinnati, Ohio, one of the principal hardwood lumber markets of the United States.

100	115	130	125	40

The Boston lumber quotations were for FAS inch quartered

oak, \$325 to \$356; plain oak, \$220 to \$230; beech, \$115 to \$135; red birch, \$200 to \$255; saps, birch, \$190 to \$200; poplar, \$200 to \$230; maple, \$150 to \$175; \$70 is now mentioned as the base price asked by mills for Eastern spruce, 8 inch and wider, and \$50 for hemlock; while plasterer's lath are quoted at from \$10 to \$20 per 1000 pieces, that sold a few years ago from \$1.00 to \$1.25 per thousand pieces, and spruce groundwood pulp is now selling at \$100 a ton at Canadian mills.

The following press item, just received from Washington, dated April 23, so fully corroborates the statements made by Messrs. James White, Clyde Leavitt and Dr. C. D. Howe, of the Canadian Forestry Commission, as to the scarcity of timber, especially that of spruce wood for pulpwood in Eastern Canada and the United States, that I feel the subject justifies me in drawing public attention to it, as it comes from a source that will not be questioned by anyone knowing Colonel Greeley's capability, and his distinguished services at home and abroad.

Washington, April 23.—Calling attention to the heavy increase in pulpwood transported from Canada last year over the year 1918, Colonel William B. Greeley, recently appointed Chief Forester of the United States, in a statement made public to-day, warns the United States of the seriousness of its timber situation. He recommends that the system of conservation used in France be adopted in America. Under the French system, only small cuttings in each timber area in one year, or in a series of years.

The National Forestry Reservation Commission to-day issued a report advocating further purchases by the Government of forest lands as a means of preventing further timber shortage. "The supplies of spruce in the Eastern United States available for paper stock are nearly exhausted," the report declares.

From the sharp advances noted above in the prices of lumber made from so many of our forest trees, giving direct evidence of a rapidly diminishing supply of the raw material, we must recognize the necessity for husbanding with care our small remaining stock in the Eastern Provinces of Canada.

William Little.

101 The Boulevard, Westmount, Montreal, April 24, 1920.

Lumber Business is Quiet in England

According to a recent notice sent out by a large Liverpool firm the lumber business in Great Britain was quiet during the past month. Imports on the small side and fairly well distributed. Consumption about kept pace. Stocks for the most part are in a healthy condition, but a few of the items appear rather full. Values were fairly well maintained, but contracting ahead is difficult to arrange.

New Brunswick and Nova Scotia spruce and pine deals, etc.—Most of the import to the Mersey, totalling 4,490 standards, went to the Manchester Canal. Approximately half this quantity is accounted for by consumption. The total stock amounts to 24,510 standards, of which the bulk is stored in Liverpool district. The demand was steady, more especially for deals, and rates remain firm. It is reported that six American wooden steamers, to carry approximately 700 standards each, have been chartered to W. B. E. I. at 30s. for April-May loading. Pine Deals—Practically no import. Stocks are extremely low.

Birch.—Logs—Import nil. Small consumption leaving holdings 21,000 cubic feet practically all in Liverpool. Steady enquiry for fresh logs. Planks—Moderate import with steady consumption. Stocks appear on the high side.

Death of Representative Western Lumberman

One of the outstanding figures of the lumber industry of Canada during the last half century, passed away at his home in Kamloops, B.C., last month, in the person of John Brennan, who died of heart failure following an attack of pneumonia, at the age of 75.

John Brennan was a native of Kilkenny, Ireland, and came to Canada with his parents when a little boy. Becoming associated with Robert and John Dollar, Mr. Brennan transferred his activities to Muskoka and the Georgian Bay and built the first mill on the North Shore. He maintained association with the Dollars for 36 years.

The late Mr. Brennan was married in 1887 to Miss Mary Fowler of Huntsville, Ont., by whom he had one son and one daughter. His wife and daughter died in 1916, and the only surviving member of the family is his son, William.

Mr. Masuret Returns to Toronto

A. E. Masuret, who has been spending the past few months visiting the B. C. mills and looking into the lumber supply and demand situation in the West, recently returned to Toronto. Mr. Masuret, who has been residing in Toronto a year and is now well-known to the Ontario trade, has joined the staff of Tomlinson &

A. E. Masuret, Toronto

Mitchell, wholesale lumber dealers, Winnipeg and Vancouver, as their Ontario representative. Tomlinson & Mitchell are among the most widely-known exporters and wholesalers in the West and specialize in all lines of forest products, with special facilities in B. C. woods. Previous to coming to Toronto, Mr. Masuret had many years' experience in the lumber business in the West.

Exports of Pulpwood are Diminishing

A sidelight on the pulpwood controversy which is agitating Washington is furnished by the Canadian trade returns for February, which show that the exports of pulpwood from Canada to the United States during that month were reduced to 52,351 cords, valued at \$539,429, or considerable less than one-half the quantity exported in February, 1919, which amounted to 145,747 cords, valued at \$1,411,100.

Exports of pulpwood have been gradually diminishing for many months, the total for the first eleven months of the current fiscal year amounting to 790,828 cords, valued at \$7,956,819, against 1,449,117 cords, valued at \$13,978,457 for the corresponding period of 1919, and 943,646 cords, valued at \$7,778,750 in 1918.

Pulp and paper exports for the month show an increase of \$2,226,054 over February, 1919, being made up as follows:

February	1919	1920
Paper and manufacturers of	\$5,031,624	\$6,304,388
Pulp, chemically prepared	1,916,828	2,615,156
Pulp, mechanically ground	217,421	472,383

Total

The paper exports for February, 1920, included 1,266,653 cwts. of newsprint, valued at \$5,290,398; 34,884 cwts. of kraft wrapping paper, valued at \$306,393, and paper boards to the value of \$405,410.

Pulp and paper exports for the first eleven months of the fiscal year amounted in value to \$92,968,105, a gain of \$118,398,985 over 1919, and of \$37,013,337 over 1918, made up as follows:

Eleven Months.	1918	1919	1920
Paper and manufacturers of	\$32,844,643	\$42,130,787	\$56,022,212
Pulp, chemically prepared	17,223,731	28,184,972	29,124,782
Pulp, mechanically ground	5,886,394	4,253,361	7,821,111

Total

Will Pay Up Arrears of Dividends

The Spanish River Pulp & Paper Mills shareholders recently held an important meeting in Toronto, at which George H. Mead, of Dayton, Ohio, president, presided. It is understood that a stock dividend plan was discussed and action taken in regard to the arrears of dividends of the company's preference stock. Under the terms of proposal, a preference stock dividend will be declared in amount sufficient to pay the total arrears of cumulative dividends on preference stock, including the voucher issued last year, respecting the one

year's dividend on the original issue of \$3,000,000 of preference shares. A meeting of the shareholders will be called in the near future to approve of the plan. It was also announced that in future regular quarterly dividends would be paid in cash on the preference stock at a rate of 7 per cent. per annum accruing from July 1st next. No discussion took place as to the payment of a common stock dividend. All the plants of the company are very busy at the present time, both in the pulp and paper departments, and the output of newsprint at Espanola, Sturgeon Falls and Three Rivers is now about 575 tons daily. Production is sold up for several months ahead.

Too Much Newsprint Sold Out of Canada

Commenting upon the newsprint situation an old established daily paper in Western Ontario, which recently suspended publication, said: One feature toward which we, in common with many other newspapers in Canada feels critical, is that which allows the raw material of Canada's forests to be made into newsprint and shipped across the border to over-sized metropolitan newspapers that are offering fabulous prices for the newsprint tonnage. If this export continues it is evident that other newspapers, which have long been public-spirited and useful institutions, will be forced to surrender. We have letters on file from New York offering 9½ cents a pound for newsprint in the roll. Canadian papers accordingly have to pay the piper, and it may be found later by Canadian newsprint manufacturers that they are killing the goose that lays the golden egg.

Extension of Railway to James Bay

A bill has been introduced in the Ontario Legislature for the extension of the Temiskaming & Northern Ontario Railway from Cochrane to James Bay. The location of the line of such extensions and of the branches and plans of all work proposed are subject to the approval of the Lieut.-Governor-in-Council, and provision is made for the cost of the work from time to time. The Temiskaming & Northern Ontario Railway Commission is given the same general powers and duties as in the past with respect to the railway branches and spurs to be constructed. The country is rich in lumber, pulpwood and minerals of various kinds.

Appeal on Contract Dismissed

On the principle that the vendor is not obliged to deliver the goods if the buyer does not pay the price unless a term has been granted for the payment, the Court of Appeal, Montreal, unanimously confirmed a judgment of the Superior Court, rendered by Mr. Justice MacLennan on May 8, last year, in an action in which Wilfrid Henri Pauze encountered an action on two promissory notes by a cross-demand against Mason, Gordon & Co., claiming \$2,057 damages for breach of contract. Pauze alleged that the company failed to deliver two car loads of fir doors on his order, and accepted by them. He did not contest the principal demand for \$240 due on two notes and judgment went against him in that action as well as on his cross-demand. He inscribed both judgments in appeal, but Mr. Justice Carroll, in rendering the final decision, pointed out that the whole litigation turned on Pauze's cross-action. He said that it was because of appellants delay in meeting his notes that respondents declined to deliver material on his orders.

"I am of opinion, first," added Justice Carroll, "that the vendor, as edited by Article 1496, of the Civil Code, is not obliged to deliver the goods if the buyer does not pay the price; and as it is alleged that it was to be a cash sale, certainly the seller was not bound to deliver without the cash. Further, the purchaser in this instance, if he was not insolvent, had given just reason for a belief that he was, and the vendors were justified in their precautions against loss. Seeing, moreover, that an arrangement had been made between the parties respecting security, respondents had a right to cancel the contract when security was not furnished.

The court's ruling was based on another point. On October 10, 1917, respondents wrote to appellant reminding him of his promise to furnish security and his failure to keep that promise. At the same time they asked to be allowed to cancel the contract and urged an immediate response to their letter.

This letter, the judge said, was not answered for eleven months, and Pauze made no claim for non-delivery of goods until he was sued on the two notes which formed the basis of the principal action.

"So that," Justice Carroll added, "we consider that appellant, by his silence for eleven months after receiving the letter proposing cancellation of the contract, acquiesced in respondents' non-fulfillment of his order. There is a distinction to be made between persons who have not been in business relations and those whose business relations have been continuous: The latter are bound to reply to one another's letters, particularly when one letter contains specific proposals and ends by asking for a reply."

Judgment a quo was confirmed on all points, with costs.

General Activity in Pulpwood Arena

Increasing Pulpwood Operations in Quebec

The Meigs Pulpwood Co., 10 East 43rd St., New York City, have transferred their Canadian holdings in the Gaspé Peninsula to the Canadian Pulpwood Corporation Limited, with the establishment of two independent operating offices, one at Campbellton, N.B., and the other at Little Cascapédia, Que.

The Meigs Pulpwood Co. began business in Canada four years ago. The office at Campbellton is engaged extensively in the purchase and jobbing of pulpwood in the territory eastward of Lévis, exclusive of the Gaspé Peninsula. From the office at Grand Cascapédia and later at Little Cascapédia operations covered the three counties of Bonaventure, Gaspé and Matane, and it is the business, property and operations of the Gaspé office which have been acquired by the Canadian Pulpwood Corporation, Limited.

In the beginning of their operations in the Gaspé Peninsula the pulpwood industry in that section was very limited in its extent. During the four years that the Meigs Pulpwood Co. have been engaged there, business has expanded rapidly and shipments have averaged 16,000 cords per annum. The company now have four rossing mills operating along the coasts with a daily production capacity of 100 cords of rossed wood and one sawmill. They have also holdings of stumpage, owned in freehold or held subject to contract, comprising approximately 600,028 cords standing. In the summer of 1919 the Meigs Pulpwood Co. started the regular shipment of pulpwood by steamer from these sections to the Upper St. Lawrence, loading and shipping approximately 12,000 cords from Gaspé and from their loading plant at New Carlisle, P.Q., to the points on the Upper St. Lawrence, including the yards of the Cornwall Terminal Co. at Oswego, from which the wood was distributed to the paper mills in northern New York district. This movement is a permanent one and will be continued in growing volume. The company believe that by 1922-23 shipments by water to the Upper St. Lawrence will attain an annual volume of 30,000 cords of pulpwood and 10,000,000 ft. of sawn lumber.

The growing expansion of the Meigs business in that territory called for additional capital requirements. This, together with the fact that all their interests in such sections were essentially Canadian, prompted the organization of the Canadian Pulpwood Corporation, Limited in which the Meigs Pulpwood Co. have the controlling interest. The Canadian Pulpwood Corporation, however, represents considerable additional holding of American and Canadian capital. This organization anticipate shipping a considerable quantity of their production to markets by steamer and operating their own mills in conjunction with their own stumpage and woods operations. The shipments by steamer will be landed in the yards of the Cornwall Terminal Co., Cornwall, Ont., and Oswego, N.Y., and will be sold to Canadian and American mills.

The officers of the Canadian Pulpwood Corporation are: President, Walter Meigs, New York; vice-president, F. C. Shorey, Montreal; secretary-treasurer, Stanley P. Pearce, New York.

The rossing and lumber mills of the Canadian Pulpwood Corporation will be located at Grand Cascapédia River, Harriman Lake, New Richmond and New Carlisle. The operations will likely open a new era in the development of the lumber and pulpwood industry in various sections which have long been handicapped with inadequate transportation facilities to markets. All this will be changed by the Canadian Pulpwood Corporation through their facilities for handling a considerable portion of their production by water to points of distribution or consumption.

Pulpwood is in Active Requisition

E. R. Heyland of the Heyland & Thompson Lumber Co., Toronto, recently returned from a business trip to New York. Mr. Heyland is very much interested in the pulp wood situation and particularly in the market for poplar. Interesting experiments are now being conducted by a number of mills across the line with regard to using Canadian hardwoods in the making of pulp and particular attention will be directed to poplar.

The "Canada Lumberman" has of late received a large number of inquiries from various parts of the Dominion, asking where and to whom poplar can be sold. There is, no doubt, with the growing shortage of spruce, that the use of other woods will have to be resorted to in the very near future and poplar will, eventually, come to its own.

There is a fair demand for pulpwood of all kinds at the present time, so Mr. Heyland reports, but owing to the high price prevailing

for lumber and other allied lines, not as much attention has been given to getting out pulpwood during the past season as to the other ends of general wood products. The prices on all lines of pulpwood are pretty firm and the following quotations now prevail south of North Bay, f.o.b. cars: Rough spruce and balsam, \$11.50 per cord, peeled spruce and balsam, \$16.00 per cord; poplar, peeled, \$11.00 per cord; hemlock, peeled, \$10.50 per cord.

The season for peeling is now on and the work is being carried out quite extensively by the settlers who have taken out poplar and hemlock. Mr. Heyland states that about 75 per cent. of the spruce and balsam, which his firm handle, is unpeeled. The work of cutting pulpwood for next season will be started in many parts of Ontario within the next few months.

Bad Winter for Pulpwood Operations

The Calder Pulp & Timber Co., Limited, of which John D. Roche is managing director, have established a rossing plant at Burt, Ont., as well as a sawmill. The latter is now in operation and it is expected the rossing plant will be running in the near future.

Mr. Roche says that the past winter was a bad one for pulpwood operations in and around Burt, as there was heavy snow to contend with and the spring rains came much too early, driving the men out of the swamps several weeks ahead of the usual time, with the result that the cut of pulpwood will be shorter this season than last.

The peeling of pulpwood has just begun and much difficulty is experienced in getting out the wood owing to the shortage of cars. If sufficient cars could be obtained, all the wood could be moved quickly and many mills, which are now short of supplies, would be afforded relief for a while.

Acquired Pulpwood Forests in Labrador

A million and a half acres of pulpwood forests in Southern Labrador, immediately north of Cape St. Charles, in Newfoundland territory, is being acquired by a United States firm to supply the British trade. Details of the deal are not yet available, but it is understood that full survey of the area has been made by means of photographs from an airplane, and the corporation has practically completed its arrangements to take over the forests, install machinery and prepare to ship pulp direct from its own harbors to Great Britain, where the pulp will be converted into paper.

Big Pulp Mills for Ancient Colony

It is stated that pulp and paper works second only to the paper mills at Grand Falls, Newfoundland, will be built by the Sulphite Company of which Capt. Storm is the manager, during the coming season. The mill, wharves and store will be erected at Glovertown in Alexandria Bay, where the Terra Nova river debouches. Besides being an excellent site and a fine deep sea for shipping, it is also claimed to be the best timber area in Newfoundland. The purchase of the Reid Newfoundland Company's timber block has completed the rounding off of the company's property and makes the whole an ideal possession. Glovertown is about six miles from the Reid Newfoundland Company's station at Terra Nova.

Will Make Paper from Bamboo

The World's Paper Trade Review of London says that Mr. Raut, cellulose expert of the Government of India, is on a visit to this country in connection with the development of the pulp resources of India, and primarily to obtain a pulp-making plant for further experimental work in investigating new sources of paper-making material, and for assisting the development of bamboo pulp enterprises.

During the last five years Mr. Raut has explored the whole of the costal belt of Burma, and at an approximate estimate he asserts that there is sufficient bamboo in sight, with the Savannah grasses of Assam, to produce 14,000,000 tons of dry pulp per annum. Bamboo pulp, he says, has many features in common with esparto, and can be used for all grades of paper. For newsprint, while it does not entirely take the place of strong sulphite, bamboo pulp can be advantageously used to the extent of half the present percentage of sulphite, and if mechanical pulp continues to maintain anything like its present value it can be so cheaply produced that it can take the place of mechanical pulp entirely. The total cost of production will not exceed one-half of the present cost of wood pulp.

Steady Demand for N. S. Lumber

Large Part of Stocks Sawn During Winter Sold for Delivery to U. S. Points—Better Shipping

Conditions generally throughout Nova Scotia during the past winter have been favorable for lumbering operations, and the cut for the season promises to be well above the average, says the Halifax correspondent of the "Canada Lumberman."

Spring set in late, but the lakes and rivers are now clear of ice, and the spring drives are well under way with plenty of water in sight to float the logs to the mills.

The labor situation has showed considerable improvement over the previous winter, but wages have steadily advanced to keep pace with those paid in other occupations, and the general rise in the price of all kinds of supplies and equipment has been felt here as elsewhere.

During the winter months there has been a very steady demand on the American market for Nova Scotia spruce and hemlock in dimensions suitable for building purposes, and a large part of the stocks sawn during the winter has been sold for rail delivery to United States points.

Unfortunately shipments have been seriously handicapped by embargoes placed from time to time by some of the American railroads, and owing to the fact that the Canadian Government would not supply system cars to be loaded for United States delivery, the supply of cars has been entirely inadequate for the business. However, with the opening of navigation this condition will be relieved to some extent, by the employment of what suitable tonnage may be obtained for charter to New England ports. In view of the hardship suffered by lumber manufacturers and exporters during the past months it is to be hoped the railway authorities will recognize the claims of this important industry to a more generous treatment in the matter of car supply, and that prompt measures may be taken to move stocks now held at railway sidings awaiting shipment.

Busy Building Season Looked For

Owing to industrial development and the great demand for dwelling houses in the larger towns and cities, a busy season is looked for in the building trades, and the indications are that a large portion of the cut of the province will be absorbed by the local market.

Shipments to the West Indies from Halifax and other Nova Scotian ports have been almost negligible for some months past, due to the fact that buyers there are well stocked, while the adverse rate of exchange has also had the effect of retarding trade in general between the two countries. The Islands, however, require large quantities of cheap lumber for the development of their varied resources, and Nova Scotia is the natural source of supply. In consequence of this, exporters are looking forward to a more active demand from this quarter as the season advances.

Small shipments have been made recently to Montreal, Toronto, and other Upper Canadian cities, but as this market has a decided preference for dry lumber, it is not likely that shipments will assume much volume until later in the year, when stocks will be in better shipping condition.

During the winter months regular shipments of deals have gone forward to the English market by liners to Liverpool and other ports in the U. K. These shipments have consisted largely of spruce and hardwood, with small quantities of hemlock and pine.

Many of the steamers plying between Boston, New York and Philadelphia and points in Great Britain have been making Halifax a port of call for completing cargoes of deals, and these together with the regular liners and the service lately inaugurated by the Canadian Government Merchant Marine have furnished unusual facilities for shipping to the United Kingdom.

Prospects of British Markets

British importers still continue to pursue a cautious policy in buying. The English market has been in a more or less depressed condition since early last summer, owing to dock congestion, labor troubles and the unprecedented drop in Stirling exchange. In addition to this there are still considerable balances of old stocks purchased by the British Government last year, overlying in this province, which are now being offered to the English consumer at attractive prices.

However, in spite of these disadvantages, all shipments made during the past months have been absorbed at satisfactory prices, and shippers here are of the opinion that a ready market will be found for all the Nova Scotia lumber suitable for export to the U. K. during the coming summer, on terms that will leave a fair margin of profit.

A Pioneer in the Lumber Arena

Referring to the remarkable career of the late Jacob Kaufman of Kitchener, Ont., a local paper says: He was born in July, 1847, on a farm near New Hamburg, and received a primary school education, chiefly during the winter months. He learned the carpenter trade, and when he was 22 years of age went to Gadshill six miles from Stratford, where he worked as a sawyer in Henry Ratz's saw mill for a period of eight years. In March of 1877 he married Mary Ratz, daughter of Henry Ratz, and a month later moved to the then town of Berlin, which at that time had a population of about 6,000 people. Mr. Kaufman built a sash and door factory on the site of the present plant. His friends thought he was making a mistake in the location at the time, as the plant was some distance outside of the village limits. His first home was in half of a small yellow frame house, which in 1911 was removed to make an extension to the Kaufman Rubber Co.'s plant.

In 1888 the original factory was found inadequate and Mr. Kaufman then erected a new building around the old one. When the building was entirely enclosed by the new structure the original plant was torn down. The change was so well planned that manufacturing operations ceased for only ten days on this account. Part of the second building is still standing, and additions have been built from time to time as the extension of the business required. As an employer of labor Mr. Kaufman had a unique record, and is an evidence of his ability and consideration as an employer. Mr. August Kraft, of Kitchener, entered Mr. Kaufman's employ when he first came to Kitchener, and has been continuously in his employ during the forty-three years of his life here. There are other employees who have worked for Mr. Kaufman for thirty or more years.

Mr. Kaufman's interest in the lumber business was not confined locally, but extended to the source of supply, and he had been operating saw mills at Rosseau Falls and Trout Creek. He also acquired a charcoal and wood alcohol plant at Trout Creek, which he had operated in conjunction with the saw mill there.

New Hydraulic Machinery Department

The Dominion Bridge Co., of Montreal, has started another important industry in the manufacture of water wheels and other hydraulic machinery, such as is used by large hydraulic power companies. It will be known as the Dominion Engineering Works, Limited, which the Bridge Company will control and is capitalized at \$10,000,000, equally divided between common and preferred stock. Among those interested in the new concern are George Chahoon, Jr., president of the Laurentide Company.

The Dominion Bridge Co. last year established an important department in the designing and building of paper-making machines. The company turned out one large machine for the Howard Smith Paper Mills, Beauharnois, Que., and is now building two Fourdriniers for the Laurentide newsprint plant at Grand Mere, as well as a new machine for the Interlake Tissue Mills Co., Merritton.

Hydroplane for Spanish River Timber Limits

For the purpose of inspecting its timber limits and watersheds, the Spanish River Pulp & Paper Co. of Sault Ste. Marie, Ont., have purchased an aero-marine flying boat. The machine will also be used for survey work, and for quick trips between the three mills at the Soo, Espanola and Sturgeon Falls, and will be operated by George H. Simpson, formerly a Captain in the Royal Naval Air Service.

The nature of the country on which the company's timber limits are located is a network of lakes and waterways, suitable for the landing of hydroplanes. The machine was made by the Aero-Marine Plane & Motor Co., Keyport, N. Y. The flying radius is approximately one hundred miles at one fueling.

Big Pulp Plant for Northern Ontario

There are various rumors prevalent in the north in regard to the pulp plant contemplated at North Temiskaming by the O'Brien interests. One rumor is to the effect that the plant will be erected during the coming summer, and that men are being employed now to begin work when the plans are ready.

A second report is that the Riordon Pulp and Paper Company has purchased the O'Brien pulp limit at the head of Lake Temiskaming. The Riordon plant or subsidiary, the Kipawa, is located on Kipawa Lake, which is adjacent to the foot of Lake Temiskaming. It would not be a difficult job for the Kipawa plant to take their logs down the lake.

It is believed that the proposed erection of the O'Brien plant and the extension of the C.P.R.-Kipawa branch along the lake to North Temiskaming, were connected. The C. P. R. plans were to have been announced some time ago, but recent advices are that the announcement has been held up and no reason given.

New Company Launched in Parry Sound

Robert Lyons, Parry Sound, Ont.

Robert Lyons, manager of the Parry Sound Forest Products, Limited, Parry Sound, Ont., which was recently granted a charter, is widely experienced in the woodworking industry. The company have purchased a large building from the Parry Sound Lumber Co. and purpose manufacturing window sash, kitchen tables, clothes-reels and other allied lines and will also carry building materials. Mr. Lyons has had an extended factory insight. Born in Ayrshire, Scotland, in 1884, he started to serve an apprenticeship at the age of 16, after which he spent three years in the office work. In 1906 he came to Canada and was for five years with Shearer, Brown & Wills and Henry Morgan Co., Montreal, in sash, doors, interior fittings and

cabinet work. Later he occupied the position of foreman for leading firms in Montreal and Toronto and was for a long period general foreman for the C. X. L.—British Cordite and U. S. A.—T. N. T. plant at Nobel. Mr. Lyons bought the Parry Sound Turning factory in 1918 and operated the same till 1920.

The Parry Sound Forest Products, Limited, expect eventually to manufacture furniture, and will endeavor to train local help for this class of work. At present they are making kitchen tables and other allied lines and will also devote special attention to general planing mill work. They are putting in a resaw and also equipment for doing a dressing in transit business. Mr. Lyons says they are prepared to tackle anything which offers future development, and the company have several patent toys of their own design which they will turn out. Mr. Lyons has always been in close touch with modern systems of manufacturing, and is enthusiastic over the future of the company.

Manufacturers Object to Some Features

A note of caution with regard to the proposed amendments to the Workmen's Compensation Act was sounded by a strong deputation from the Canadian Manufacturers Association, which waited on Premier Drury recently, in Toronto. The deputation, while emphasizing the fact that it was not against increased compensation for widows and children, claimed that the amendments proposed were wrong in principle, and might place a premium upon malingering.

The deputation's case was presented by J. E. Walsh, general manager of the Canadian Manufacturers Association. Exception was taken to the proposal to make increases retroactive, on the ground that firms now in business would have to provide not only for their own pensioners, but for "the train of pensioners left behind by munition works and other concerns, which have been wound up or have left the country."

The deputation further stated that Ontario's compensation allowances are the most liberal paid in any Province except Manitoba. Ontario's allowances also compare very favorably with those in the United States.

The brief submitted by the deputation pointed out that farming and certain other industries did not come under the Act, and that these industries, which did, had no right of appeal from the decisions of the board.

Premier Drury promised consideration for the representations made.

Prices Only For Prompt Acceptance

There was a day not so many months ago when a customer of a retail lumberman could walk into the office, get a quotation on a bill of stuff and come around a few weeks or months afterwards, and have the order filled at the prices named on the occasion of the previous visit. Like the 25c meal, the dollar a day hotel, the 75c shirt, the \$2.00 hat, this practice has joined other relics of the past when living was cheap and prices stable and there were no after-the-war problems engaging the attention of the nations, the masses or the classes.

At a recent meeting of retailers one member stated that when he gave a quotation now it held good for only a few days. Lumber and all interior trim, frame work, doors, sash, mouldings, flooring,

etc., had to be taken away within thirty days. The practice of securing a quotation and then expecting the retail lumberman to hold the stock for a long period, not only providing storage for it but also forgetting about the constant shifting of values, is now out of date.

The retail lumbermen of London have in the past been up against the matter of private parties, contractors and builders getting prices on certain lines and then expecting the dealers to make the conditions, under which quotations were given at the time, hold good for an indefinite period. In order to overcome this each dealer now stamps on every bill or communication the following:

"Owing to scarcity of lumber stocks, we quote for prompt acceptance only and delivery before —, after which date list prices current at time of delivery will be charged."

In some instances in the past purchasers would come around in the fall, get quotations and the next spring wait upon the dealers and request delivery of the stock at the old values. The new arrangement entered into will obviate all misunderstandings or practices of this character and will make transactions more clean-cut, prompt and decisive.

Activities of Wayagamack Company

The question is being asked of late as to whether the stock of the Wayagamack Pulp & Paper Company, Three Rivers, Que., will join in the boom enjoyed by the paper stocks in general on the Canadian exchanges. The company's timber limit, saw mills, etc., are located in the St. Maurice River district, Province of Quebec, where it holds 1,121 square miles of spruce and pine timber land. The company is engaged in the manufacture of sulphate pulp and "kraft" paper. During the past year the company acquired additional timber limits, the Breakey Gaspé limits, comprising 451 square miles, and is believed to have sufficient raw material for an indefinite period.

The plant includes a pulp and paper mill of 200 tons capacity at Three Rivers, power being furnished by the Shawinigan Water & Power Company. At the present time there is such a famine in sulphate pulp that this part of the company's operations should be of special profit. Last year's report showed little change from the preceding year, the net income of \$551,547 comparing with \$544,036 in 1918, the earnings on stock being 11.03 per cent., as against 10.88.

Increased Revenue from Quebec Forests

Dr. Miville Dechene, Deputy Ministry of the Department of Lands and Forests, for the province of Quebec, stated recently that he expected the revenue of his department, which last year had reached the sum of \$2,510,000, would be greatly augmented in the fiscal year ending June 30.

Through the good work done by the forestry engineers of the department and with the co-operation of large corporations, the forest resources of the province of Quebec are being well protected at present and with the policy of reforestation followed by the department, their wonderful riches will go on increasing.

The department has at present important barrage work on hand on the Ste. Anne River in the county of Montmorency, while plans are being drawn for a dam on Lake Kenogami, which will develop great power.

In reference to the proposed barrage of the St. Lawrence river, Dr. Dechene stated that the department would take an interest in the matter, and that at the last conference held in Buffalo, an engineer of the department was sent to look after the interests of the province of Quebec.

The Deputy Minister added that the policy followed by the provincial Government in regard to woods and forests, as well as hydraulic resources had brought good results.

Demand for Lumber Across the Border

It is said on good authority that in the State of New York there are 24,000 farm houses untenanted at the present time. The tenants of those homes moved to the cities, for war work purposes, and have not returned to the country. In these sentences lie the basis of the explanation of the extraordinary demand for lumber and all building material from the United States, in the opinion of Mr. G. H. Trump of the Acorn Lumber Company of Pittsburg, Pa., who recently visited Vancouver.

During the war farm houses and buildings were largely neglected. People crowded into populous areas, and were content to put up with ever-crowded quarters. Eastern lumber mills in very many cases were closed owing to lack of demand for their product, or because their workpeople were employed on munitions, or the machinery was turned in other uses. The very heavy demand for lumber after the cessation of hostilities is only natural in view of these facts.

Good Work Done by the S. C. A.

Wide Work Conducted by the S. C. A.

Wm. Henderson, Toronto,
Supt. Shantymen's Christian Association

Over 600 camps, containing 33,400 men, were visited by the missionaries of the Shantymen's Christian Association during the year 1919. The number of missionaries employed is 24, and the revenue for the past year was \$12,000.

The work of the Shantymen's Christian Association has been growing in importance and influence ever since it was inaugurated in 1908. The founder of the Association is Mr. Wm Henderson of Toronto. During the last 11 years this organization of Christian men of various denominations has been sending missionaries to preach and distribute tracts and other religious literature to the men in the lumbering mining and construction camps. Financial support has always been forthcoming from freewill

offerings, and one feature of the work is that no collections are taken in the camps; neither is any printed matter sold. Thus no motives of a mercenary character are evidenced nor is the work of the Association open to misunderstanding.

The Shantymen's Christian Association call at camps regularly in Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan and British Columbia, and a couple of years ago the work was extended across the border and become international in character. Now camps are visited in Michigan, Minnesota, Wisconsin and other States. In Uncle Sam's domain six missionaries are maintained and during the past year spoke to 17,000 men.

The outlook for the coming year is encouraging. H. B. Gordon of Toronto, was, at the recent annual meeting, re-elected president, W. H. Adamson, 15 Toronto St., Toronto, is the treasurer, and Wm. Henderson, 30, The Oaks, Bain Ave., Toronto, is superintendent. The honorary secretary is Rev. Oswald J. Smith, Toronto; R. W. Sharpe, president of the Pacific Box Co., Vancouver, is the chairman of the work in British Columbia, and the Association office is at 510 Hastings St. West, Vancouver.

The work was commenced in the camps during the past winter in New Brunswick and Nova Scotia. J. F. Bullock, 187 Germain St., St. John, is the secretary-treasurer of the movement in the Maritime Provinces.

In the "Canada Lumberman" from time to time various features of the work have been presented and need no extended reference on the present occasion. A number of representative business men have given up responsible positions to engage voluntarily in the labor of the Shantymen's Christian Association.

Better facilities are being afforded for the prosecution of the work on Vancouver Island. John P. Ross, a Presbyterian missionary, has donated his launch "Jean," for carrying the missionaries from place to place in the Barclay Sound. Vancouver Island, on the west side. Money is being raised by an influential eastern newspaper for another launch for use between the islands and the mainland, and the people of Victoria are providing a motor car for the representatives of the Association in the southern part of the Island.

New Heading Mill Starts Operations

Work upon the new heading mill which is being erected by the Canadian Co-operation Company at Smiths Falls, Ont., upon land adjoining the site of their present plant, is being pushed along and it is expected that the new mill will be in operation this month. Mr. W. G. DeMarse, the manager, states that the heading plant will employ from 45 to 50 additional men, not including those who will be employed in the bush in the winter time.

It is nine years since the Canadian Cooperage Company established their branch in Smiths Falls, and in that time their operations have been most successful. At present they employ 65 men, and the industry is recognized as a distinct asset of the town.

As the years go by it is necessary to go farther and farther for elm, basswood and ash logs which are necessary for the manufacture of their product. This season the company secured a good cut of logs considering the unfavorable conditions which obtained throughout the winter, and prospects would indicate a most successful year for the business.

It is expected that the company will make use of the Rideau Canal for transportation purposes, this year, for the first time since locating there. They expect to place a boat in commission and will

tow the logs down the lakes and bring in other material by barge.

Up to the present time the operations of the company have been confined to the manufacture of staves and hoops, but when the new mill is put into commission heads for barrels will be made also, and Mr. DeMarse stated that they were considering starting a cooperage department which would mean that the material at present turned out could be made into barrels, kegs, etc., upon the premises and exported in finished form.

Will Lumbermen Divert the Waters?

There is no information available as to whether lumbermen in the State of Maine still divert the waters of Champlain Lake into the Panobscot River, P. Michaud, Restigouche, was informed by Hon. A. L. Sifton, in the Commons, Ottawa, recently. An international commission was appointed years ago and made a report to the government in regard to the St. John River.

Mr. Michaud was also informed that the State of Maine did not make a report of the commission's findings to the Department of Public Works. The total cost paid in connection with the commission reached \$79,481.87.

Fraser's Will Take Over Big Holdings

The sale of the lands of the New Brunswick Railway Company, which consists of about 1,700,000 acres, to the Fraser Pulp and Paper interests is believed to be imminent.

Notices have been published calling a special meeting of the shareholders of the company at St. John on June 1st "to consider a recommendation of the directors concerning the sale of the company's properties and to authorize the directors to sell or dispose of all or any part of the same at such price and on such terms and conditions as they may approve."

Following the passage by the New Brunswick Legislature of the bill incorporating the Fraser Paper Company, Ltd., with authority to erect dams and pulp and paper mills at the Tobique Narrows, General H. H. McLean, M.P., representing the New Brunswick Railway Company, was here for a conference with Archibald Fraser, and it was understood at the time that details were being arranged for the Fraser interests to take over the New Brunswick Railway Company's lands in connection with their Tobique project.

If the Frasers are to take all the company's lands there will, doubtless, be more than 12,000,000 involved in the deal.

The Housing Situation in Montreal

Although the housing situation in Montreal is so serious that some families have had to seek shelter in the Meurling Refuge, yet no steps have to date been taken by the city to have the vacancies on the Housing Commission filled. Jules Crepeau, assistant city clerk, said that nothing will be done in the matter until the bill before the City Council is passed. This bill deals with a petition to the government for the sum of \$3,000,000 to finance the work of the Housing Commission. Until this money is forthcoming the Commission could do nothing.

Since January 313 building permits have been issued for construction valued at \$3,031,039. In addition 340 permits for repairs were also issued. For the same period last year 198 permits for new buildings valued at \$542,039 were granted.

Planning for Erection of Cheap Homes

Housing was again the subject of discussion by the Board of Control, Toronto, recently, when various proposals of Mayor Church for the building of houses were considered, and plans prepared by the city architect, for cheap four, five and six-roomed houses were examined. These plans provided for the erection of houses in pairs, the estimated cost of each pair being as follows: Six rooms, \$6,550; five rooms, \$5,830 and four rooms, \$4,240. These figures were exclusive of the cost of land.

Controller J. G. Ramsden suggested that these houses might be erected in rows of eight or ten and the cost further lowered. City Architect F. W. Price agreed that if this were done and a wall accordingly eliminated, the cost could be reduced considerably. He estimated the cost of a four-roomed house under this arrangement at about \$2,300. The latter houses as planned would have a frontage of 14 feet and a depth of 26 feet, and would be provided with all conveniences. The board decided to have the city architect prepare an estimate of the cost of such rows of houses before approving the plans.

Approval was given to the amendment of the building by-law in certain sections of Toronto, under control of the city architect and fire chief, to permit of the construction of frame, roughcast and other cheap classes of houses, and to the proposal for the building of houses on the Housing Guild plan submitted by the Building Trades Council.

Death of Mr. Charles P. Baker

Charles Parker Baker, of Fairville, N. B., died on May 5th while visiting his niece in Watertown, Maine. His body was brought to St. John for burial. The name of Mr. Baker has long been identified with the lumber industry of New Brunswick. He operated a mill years ago when Milford and Fairville were thriving villages and mostly dependent upon the lumber mills. Later he became associated with Hon. A. F. Randolph, and they formed a partnership of Randolph & Baker. The firm was incorporated as a joint stock company in 1899. For many years Mr. Baker officiated as manager and erected a magnificent home near the mills at Randolph. Under his management the business expanded, lime quarries were opened and the operations of the company became very substantial. About ten years ago he retired from active management and has since been residing quietly in Fairville.

In an account of the Randolph & Baker industry written in 1897 the following appears:

"The village of Randolph, which their industry has built, is on the shore of the St. John river, above the harbor of St. John. They can hold 3,000,000 feet of logs at once in the boom along the shore by their mills, and they have a quarter of a mile of wharf front at the mills, where schooners and lighters can take cargo. Right in rear of the saw mill are inexhaustible quarries of the finest quality of limestone. The haul from quarry to kilns is only about 1,400 feet, and as the latter are on a lower elevation besides the wharves, the stone is simply hauled out and dumped into the top of the kilns, while the fuel is run down on tramcars from the saw mill to the furnaces below. Huge sheds hold the barrelled lime. The firm make their own barrels, which roll by gravitation from the coopers' shop into the kilns. In 1894 the firm turned out 65,000 barrels of lime. It was chiefly sold in the United States. Nowhere in the world, perhaps, is there an opportunity for the joint prosecution of the lumber and lime industry equal to this. The firm own eighteen houses, that furnish twenty-six tenements. They employ about 165 men in summer."

Some Newsy Briefs from the East

According to a late report the St. John River Log Driving Company will handle about fifty million feet of logs this season. Last year the drive was thirty-two million feet. The freshet in the St. John river is subsiding and many large rafts of new logs are being brought down river from the booms at Fredericton and placed in Marble Cove and in South Bay, where they will be sorted and distributed to the various mills by James Holly & Sons, who has been towing and surveying logs for many years.

* * *

Practically every New Brunswick farmer owning timber land within hauling distance of a navigable river has been taking advantage of the present high price of spruce, fir and poplar, and has cut large quantities. Last year's buyers paid \$16 a thousand for selected logs, but this year the price has soared to \$23 a thousand on the river banks. Many individual owners of woodland have installed lath machines and are shipping their product to the American market, which is offering \$16 a thousand. The United States lath market is high at the present time. The price for laths in St. John, prior to the war, was ninety cents a thousand. There is also a boom on in pulp wood and it is said that a large number of farmers have made an average cut of fifty cords, for which they are receiving \$14 a cord, loaded on cars. Last year the price averaged from \$9 to \$9.50 a cord.

* * *

A new wage schedule is being sought by millmen along the North Shore of New Brunswick. The companies which are interested are: Shives Lumber Company, Richards Mfg. Company, W. H. Miller & Company, Fraser Lumber Company, Dalhousie Lumber Company, The Restigouche Boom Company and A. Barberie. Board and rotary sawyers with rigger are asking \$8 a day; band and rotary sawyers, \$6; round saw filers, \$6.50; lath sawyers, \$5; handy men, such as millright helpers, assistant foremen, pop sawyers and helpers, \$5; blacksmiths, \$7; mill engineers, \$7; deal workers, \$5; general labor, \$4. They also ask that nine hours constitute a day, double time Sundays and holidays.

* * *

Lumber shipments from St. John have been curtailed owing to a shortage of foreign cars coming through from the United States. It is said, however, that conditions are beginning to look more favorable and that a bigger movement of manufactured spruce, etc., may be expected from now on. Shipments to the United Kingdom have practically ceased, owing to the close of the winter port season. Some sailing vessels are being chartered to take cargoes of deals from Nova Scotia ports to the West coast of Britain and the

east coast of Ireland. A few sailings are also predicted from St. John and New Brunswick ports.

* * *

The various mills in St. John are now in operation and are prepared for a big season's cut. Large quantities of logs are being brought down river and a good start is being made. The readjustment of wages has made the employees contented and everything should work in perfect harmony until the season is brought to a close.

Toronto Firm Acquires Dry Kilns

Robert Bury & Co., Toronto, have completed the purchase of the dry kilns of the Toronto Kiln Co. at the foot of Spadina Ave., adjoining their lumber yards and large veneer warehouse. The capacity of these kilns will enable Robert Bury & Co. to kiln dry 200,000 feet of lumber per month. The firm specialize in mahogany, walnut, quartered oak and all other American and Canadian hardwoods. They also have a large and representative stock of veneers of every description. The recent purchase of the dry kilns will enable them to carry heavy quantities of kiln-dried mahogany, walnut and all Canadian and American hardwoods.

What Licensees are Forbidden to Cut

Article 12 of the Wood and Forests Regulations of the Province of Quebec has been amended as follows:

"Licensees are forbidden to cut on Crown lands white or red pine measuring less than 13 inches, and other trees less than 12 inches diameter at the stump measured two feet above the ground; but it is permitted to cut black spruce and gray spruce down to 10 inches in diameter, paper birch, balsam, fir, poplar and aspen down to 7 inches in diameter, measured as aforesaid. However, the Lieutenant Governor in Council will have the right, after inspection to the Forest Service, to recommend exception to these regulations on the territories indicated by the Forest Service and according to the conditions imposed by the Government."

Another Compensation Plea Presented

The Court of Appeal, Montreal, has dismissed the appeal of H. Chagnon & Co., sash and door manufacturers, Montreal, from a judgment maintaining in part an action taken against the company appellant by James Hutchison in his quality of liquidator for Thomas Ford Limited, box makers, and interior trim manufacturers, Montreal. The condemnation against appellants was for \$945.17.

When the Thomas Ford Company was placed in liquidation appellants were indebted to it for goods sold and delivered. The liquidator demanded payment, whereupon appellants pleaded compensation by way of two notes—one for \$1,038.61, dated June 5, 1917, payable two months after that date, and the other for \$280, dated July 12, 1917, payable fifteen days from that date. This note the appellants acquired from one Peladeau on July 30, 1917. The winding-up order was issued against Thomas Ford, Limited, on August 1, 1917.

It was decided that, while appellants could invoke the note of \$280 in part compensation of their indebtedness—as this note matured before the liquidation, and as there was no fraud on the part of appellant in acquiring it—they could not declare compensation had taken place with respect to the amount of the other note, which only matured on the 5th-8th of August, which was after liquidation had commenced.

Appellants invoked the provisions of Article 1189 of the Civil Code in support of their appeal and urged that the term of payment stipulated in the note was a "terme de grace."

Mr. Justice Martin pointed out that the appellants did not acquire a transfer of the original debt for which the note was given. The term of payment stipulated in the promissory note, which was appellants' title, was, the judge said, a "terme de droit," and payment of the promissory note could not have been demanded until the expiration of such stipulated term, which did not expire until after the Thomas Ford Company was placed in liquidation, at which period the rights of the creditors were fixed, and compensation could not take place to their prejudice. The difference between "terme de grace" and "terme de droit," His Lordship concluded, is clearly set forth by the late Mr. Justice Langelier in his work on "Civil Law," under Article 1189.

Will Erect New Pulp Plant

The St. Maurice Paper Co. will erect a new pulp plant at a cost of half a million dollars, at Cap de la Madeleine, Que. The building will be two storeys high and built of concrete and brick, and will be equipped with nine grinders. The St. Maurice Paper Co. also contemplate erecting a new office at Cap de la Madeleine, at a cost of \$25,000. The structure will be two storeys high, 80 x 40 ft.

Personal Paragraphs of Interest

Bartram and Ball have removed from 215 to 213 Drummond Bldg., Montreal.

C. O. Maus, of the Hyde Lumber Co., South Bend., Ind., spent a few days in Toronto recently calling upon the trade.

A. L. Clark, president of the Vancouver Lumber Company, Vancouver, has again been elected president of the Southern Pine Association.

Herbert Timms, of Timms, Phillips & Co., Vancouver, spent a few days in Toronto and Montreal recently and called upon a large number of friends in the trade.

C. H. Cudemore, of C. H. Cudemore & Co., West India Docks, London, E., is on a visit to British Columbia in connection with the exportation to England of wooden houses.

J. C. McComville has been appointed successor to C. E. Hurdart as manager of the Associated Timber Exporters of B. C., Ltd., Vancouver, and has entered upon his new duties.

F. L. Johnson, Jr., lumberman, has removed his office from 1231 Lumber Exchange Building, 11 South LaSalle St., Chicago, to 941 Stock Exchange Building, 30 North LaSalle St., Chicago.

Hart & McDonagh have removed their wholesale lumber offices from the Temple Building, Toronto, to the ground floor of the RobINETTE Chambers, corner of Bay and Temperance streets, where they have spacious and well lighted quarters.

Duncan McLaren, President of the Union Lumber Co., Toronto, and Mrs. McLaren who have been spending several weeks at Sea Breeze, Florida, and White Sulphur Springs, West Virginia, have returned home. Mr. McLaren is now enjoying excellent health.

The Pedwell Hardwood Lumber Co. have removed from Room 22, 79 Spadina Ave., to their new office building at the foot of Spadina Ave., Toronto. The quarters recently vacated by the Pedwell Co. are now occupied by G. A. Grier & Sons, Limited, of Montreal.

J. A. LeBel, of New Carlisle, Que., recently passed away after an illness of several weeks. He was the father of E. A. LeBel, lumberman, of Sarnia, Ont. The late Mr. LeBel was a gentleman widely known and highly respected. His son was with him at the time of his death.

R. Macfarlane and Company, Limited, lumber merchants, Montreal, have taken out a group insurance policy, covering every employee; five hundred dollars to each employee of less than five years' service and \$1,000 to each employee with more than five years' service, increasing \$100 every year, with a maximum of \$2,000.

Capt. Robert Dollar, head of the Canadian Dollar Company, Vancouver, has returned from the Orient, where he made an extended trip. He drew attention to the activities of the Japanese in northern China, and said that when the Japs took over a section of country the time occupied in unloading ships was more than doubled.

The many friends of W. G. White, President of the Gloucester Lumber & Trading Co., of Bathurst, N. B., will extend sympathy owing to the death of his wife who passed away recently after a few days' illness from influenza. She was formerly Miss Annie Bowser of Chatham, and besides her husband leaves one daughter.

Herbert S. Cox informs us, says the Timber Trades Journal of London, Eng., that, having left Cox, Long & Co., Ltd., with whom he has been connected since its inception, he has commenced business on his own account under the style of Herbert Cox & Co. Mr. Cox has been fortunate enough to secure offices at No. 521 Salisbury House, London Wall, E.C. 2.

C. A. Westley of the sales staff of the Toronto office of G. A. Grier & Sons, Montreal, accompanied by Mrs. Westley, left on May 13th on an extended visit to the Old Country and Europe. Mr. Westley will visit the scenes of his youth in Bristol, which city he left some thirteen years ago. Many friends in the lumber industry will wish him a very enjoyable holiday.

H. R. Pearce of the Pearce Company, Marmora, Ont., was in Toronto recently calling upon the trade. The company began sawing operations last month and will cut about three million feet this season, seventy per cent. of which will be hardwoods. The company's new mill is now all completed except the sorting shed. Mr. Pearce reports a shortage of men and an absence of rains in Hastings county in connection with the spring log drives.

H. Allen Wilson, of Westmount, has been engaged by the Laurentide Co., Ltd., as second pilot for the aviation work this summer. He had four years' service in the Royal Naval Aviation Service. It is expected that about 4,000 square miles can be photographed this summer, in addition to the patrol of the country from Lac a la Torue due west to the head of the Mattawin River and as far north as Big Lac Clair on the river du Poste, to prevent forest fires.

Norman D. Johnston, Canadian Government Trade Commis-

sioner in Bristol, England, is at present in Canada. He has visited leading centres in the Maritime Provinces and is proceeding west to Vancouver. When he returns from the West he will call on manufacturers in Ontario and Quebec. Any manufacturer wishing to see him should communicate with the Commercial Intelligence Branch, Department of Trade and Commerce, Ottawa.

Brigadier-General J. B. White, of the Riordon Pulp and Paper Company, Montreal, has been appointed officer commanding the 17th Duke of York's Royal Canadian Hussars, with headquarters at Montreal. General White will revert to rank in order to take the command of the calvary unit; he will be gazetted as lieutenant-colonel and Brevet Colonel, leaving the way clear for his eventual transfer to the reserve of officers in the course of time as brigadier-general.

J. C. Bartram, for many years prominently connected with the Rideau Lumber Co., Ottawa, has leased offices in the "Jackson Building," Ottawa, and has launched out for himself in the wholesale lumber line. Mr. Bartram spent some time during the past winter in the sunny South, and, since his retirement from the Rideau Lumber Co. in January last, has enjoyed a good rest. He is now in splendid shape and is attacking the lumber game, with which he has been associated since 1887 in various leading capacities, with vim and renewed energy.

Mr. Matthew Brown Enters Upon New Duties

Mr. Matthew Brown, who for nearly four years past has been Ontario representative of the Gall Lumber Co., Toronto, has been appointed Canadian salesman for the Thomas Hall Lumber Company of Charleston, W. Va. They are manufacturers of yellow poplar, oak, maple, chestnut, basswood and other hardwoods, and have for some time been doing business in the Dominion. In assuming his new duties Mr. Brown carries with him the best wishes of his late employers, and the many friends he has made in the trade. He has had a wide experience in the lumber business, first in Hull, Yorkshire, England, where he served five years' apprenticeship with a leading firm, and later in Petrograd and London. Coming to Canada in 1912, Mr. Brown was associated for a couple of years with the R. Laidlaw Lumber Co., Toronto, in the office and on the road. He is conversant with the hardwood trade and is looking forward to developing a large business in the Dominion for the Thomas Hall Lumber Company.

Associated Mills Open Eastern Office

E. D. Warner, who for the past year has been with the Associated Mills, at their head office, in Vancouver, B.C., has been appointed their eastern Canadian representative and has opened an office at 26-28 Adelaide St. West, Toronto, until he can secure permanent quarters. Mr. Warner, who is a former member of the Royal Flying Corps, was for six years on the selling staff of the Vancouver Lumber Co., Vancouver. He is an old Ontario boy, being born in Cayuga, Haldimand County, but has been living in the West for a long period. The members of the Associated Mills are the Alberta Lumber Co., Craig-Taylor Lumber Co., Dominion Creosoting & Lumber Co., Eburne Sawmills, False Creek Lumber Co., Ladner Lumber and Robertson & Hackett Sawmills. Mr. Warner is now calling upon the trade in Ontario and the East in the interest of this widely-known organization.

Do Not Look for Reduction

"The best advised men in the industry can not see any reduction in demand for their products for the better part of a decade, and during that time they do not look for any market reduction in building material prices. For support of this opinion they hark back to the years immediately following the civil war, when thirteen years elapsed before building material prices returned to pre-war levels. The conditions obtaining in the sixties and early seventies are, of course, not to be compared with those now prevailing or with those that are likely to obtain during the next half decade. This fact serves to illustrate how futile it is in the light of the present potential demand, and that of each succeeding year which is pyramiding the present-day building famine, to hope that supply can again attain in ascendancy over housing and commercial space requirements sufficient to offer legitimate prospect that construction costs will drop to levels prevailing five years ago."

A further diminution in the exports of pulpwood to the U. S. is shown by the February returns. In that month the shipments totalled 52,531 cords of a value of \$539,429, as against 145,741 cords, valued at \$1,411,100, in the corresponding month last year. The total for the eleven months of the fiscal year amounted to 790,828 cords, valued at \$7,956,819, compared with 1,449,117 cords, valued at \$13,978,457, for the corresponding period of 1919, and 943,646 cords, valued at \$7,778,758 in 1918.

The Cosy Restaurant

The Spacious Exhibition Room

Exterior of the Rink

Where British Empire Timber Exhibition Will Be Held in London

Canada at British Empire Timber Show

W. B. Stokes of the Forest Products Laboratories of Canada, Montreal, who is in charge of the Canadian exhibits for the British Empire Timber Exhibition, which will be held at Holland Park Rink, London, Eng., from the 5th to the 17th of July inclusive, sends some interesting information to the "Canada Lumberman" with respect to the big forthcoming event, which is arousing much interest. The purpose of the Exhibition is to obtain and present information and illustrations as to the timber resources of the Empire and no private firm has been asked to exhibit.

Every commercial species of wood will be represented by four 8 foot boards, two of which will be clear and two of a merchantable quality. One board of each quality will be planed smooth.

Mr. Stokes adds that the work of collecting exhibits has been in his hands and that he is indebted to a number of dealers and manufacturers for boards and manufactured articles, and would like to thank them publicly through the columns of the "Canada Lumberman" for their co-operation and kindly interest.

Holland Park Rink in which the Empire Timber Exhibition will be held, is on the Central London Tube and very conveniently situated for visitors. Its total area is about 30,000 square feet of which about 20,000 feet will be occupied by exhibits. Canada applied for 1600 square feet and has been actually allotted 1876. This space will be almost entirely occupied by specimen boards and wood products but an exhibit of wood pulp has been prepared to illustrate the manufacture and uses of groundwood, sulphite and kraft pulps. The accompanying illustrations of Holland Park Rink, London, show the splendid facilities for the gigantic exhibition.

Timber Limit Inquiry Now Under Way

Messrs. Justice Riddell and Latchford, who constitute the commission appointed by the Ontario Provincial Government, some time ago, to conduct an investigation into the affairs of the Department of Lands, Forests and Mines, have begun their work. Several sittings were held recently in Toronto, at which prominent lumbermen were examined. The inquiry is now being proceeded with at Sudbury and other northern points where it is more convenient for witnesses to attend. A wide range of ground is being covered by the commissioners in regard to the revenues from timber licenses, the granting of certain concessions, the accuracy of returns made under the Crown Timber Act, the cutting on Crown lands for which no licenses had been granted, and data showing timber berths disposed of without competition.

An official of the Department submitted memoranda taken from the records setting forth the areas within a certain territory upon which the timber rights were disposed of without tenders being invited, and declared that several thousand square miles had thus been "handed over" between the years 1915 and 1919. Other phases of the question are to be gone into and the inquiry is likely to last for some time and be exhaustive in scope.

The evidence adduced has been covered in the daily press and much of it played up in sensational style, as if all lumbermen were profiteers or plunderers. The turn and twist given to the statements of those who have appeared on the stand, depends very much upon the party stripe of the journal giving publicity to the proceedings.

No editorial comment can be made at the present juncture as the matters are sub judice. It is well, however, for the average man to reserve judgment in connection with this political probe and to wait until every aspect of the situation has been presented. Similar judicial commissions have been previously appointed who, at the outset, thought that they had unearthed bombs. The outcome was that their findings were either too radical and severe or of a non-committal and white-washing character.

It is advisable not to arrive at any hasty decision. All the facts will probably be brought to light and everything relating to past transactions and procedure of the Ontario Department of Lands, Forests and Mines laid before the commission. In every dispute or public question, there are two sides and "the truth besides," as a representative publisher once remarked, and rendering a verdict before all the evidence has been submitted is not compatible with twentieth century jurisprudence.

A cable has been received from Hon. G. H. Ferguson stating that he has wired Mr. Justice Riddell asking that the records of the Department of Lands and Forests in reference to the timber transactions now under investigation be availed of, and that the Commission withhold its findings until he can be present and give testimony.

Mr. Justice Riddell has stated that the Commission will not conclude its investigation until Mr. Ferguson can be heard, and that it was the intention to have him appear in respect of the information already obtained had he been in the city, but that in his absence another officer of the department was called. In any event Mr. Ferguson will be given a full opportunity to present the facts from his own standpoint.

Making Good Use of Business Cards

Too many business cards are cast into a drawer or get buried under papers. The result is that when the name of a firm or its representative, specializing in a certain particular line, is desired, the little bit of pasteboard cannot be located. A London, Ont., retail lumber merchant has adopted the idea of putting all cards of forest products firms and their representatives in a neat wire frame, suspended from the wall, close to his desk. The references are then readily available and, in case he wants a certain line of stock on short notice, by glancing over the cards, he recalls quickly to mind what each man deals in, what stock he has in hand, and the occasion of his last visit. There is no looking around for addresses, initials or other matters that may entail delay. The plan of keeping the cards in a prominent place is one that is working out very satisfactorily.

"Selecting the Babbitt"

United American Metals Corporation, Diamond St. & Meserole Ave., Brooklyn, N.Y., have issued, in pamphlet form, a copy of a timely and instructive address recently delivered before the Automotive Service Association by H. S. Hood, who is a member of the United American Metals Corporation. There is much useful information in the address directly applicable to master mechanics and superintendents in the lumber yard.

In his address Mr. Hood referred to the composition of good and inferior babbitts, explaining the various points of different metals, and driving home the points scored with practical illustrations. A copy of "Selecting the Babbitt" may be obtained by writing United American Metals Corporation. One fact, which the speaker emphasized, was the important function which babbitt metal plays in industry, and if any bearing problem is encountered a babbitt expert should be sought, as any modern babbitt manufacturer would be only too glad to give advice.

The Kakawa Lake Lumber Company are constructing a new saw mill near Hope, B. C. The work of erecting the mill is progressing rapidly, and it is expected that manufacturing operations will be started this month. The plant is such as will be capable of turning out a full line of mill products, including finished lumber and building material, such as siding, flooring, studding and standard building requirements.

General Survey of Canadian Lumbering

The Labor Gazette, of Ottawa, in its last edition reviews lumbering activities in Canada from East to West and says:

Lumbering operations practically ceased in the woods of the Maritime Provinces during March, except in the Moncton, Campbellton and Fredericton centres, and the usual short inactive period prior to the spring drive was experienced; the cut in northern New Brunswick was said to have been the greatest on record; about 2,000 men were supplied to these camps by the Government Employment Service. Quebec reported the winter camps closed down for the season, the heavy snowfall in the bush impossible; river driving had not yet begun. In Sherbrooke district also the timber, railway tie and telegraph pole camps broke up before the close of the month. Ottawa and Hull reported activity in the lumber camps as still continuing. Peterborough also reported lumbering as very active and sawmills making ready for a heavy season's work. Fort William and Port Arthur reported the closing of several of the local camps, owing to thaw, but work continued in those situated on high ground and fairly near the railway lines. Demands on the Winnipeg labor market were cancelled about the middle of the month, and the lumbering season closed in Northern Manitoba; from 1,500 to 1,800 men were expected to leave the camps, but it was anticipated that the mills would use up most of this labor. Prince Albert reported some demand for skilled men for the mills. In Edmonton district bush work was still to be had, but men were unwilling to take it as farming jobs were opening up. Fernie reported great lumbering activity, in spite of adverse weather conditions; mills in the southern section of the country (Baynes, Waldo, etc.) already had sufficient stock of logs to insure uninterrupted mill operations. In the Cranbrook district the mills were already working continuously day and night; there was less demand for teamsters and hookmen in the camps and men were returning to the prairies. Lumbering still continued active in Nelson, every available man being employed, although the burning of Summit Lake mill and planer reduced the demand. At Vernon some logging camps closed down, but tie cutting camps continued active. Vancouver reported lumber camps and saw and shingle mills as very busy. Prince Rupert reported continued activity along the line of the Grand Trunk Pacific Railway, and more men were required for work in Queen Charlotte Islands. At Victoria all branches of the lumbering industry continued in a thriving condition. Nanaimo reported the lumbering trade still fairly active, with reasonably good prospective shipping; new mills started at Deep Bay, Grantham and Courtenay, and a new camp was opened at Lasqueti Island.

Permanent Wood Houses in France

Hercule Barre, Canadian Trade Commissioner at Paris, in a recent report to the Department of Trade and Commerce, Ottawa, has something to say on the importation of Canadian wooden houses in France.

The Minister "Des regions liberees" has up to now, through his technical services, contracted for wooden houses, upon requests for same from the prefects of the various liberated departments. These wooden houses are of a temporary kind to be used as provisional residences only and are allotted by the prefects free of charge. The requests made for these kinds of buildings are based by the prefects on the number of people returning to each given spot or on the necessity for immediately repopulating certain agricultural districts. There have been 25,000 buildings requested and 40,000 contracted for by the Ministry in France—except for one contract placed with an American firm with unsatisfactory results. Part of the 40,000 houses are still in the south of France owing to transport difficulties.

The Ministry is adverse to buying further temporary buildings and has cancelled part of the contracts, transforming some of them into contracts for temporary barns.

When in receipt of the information above requested, we could further look into the matter and see whether the French Government, through the Ministry of Finances and the Ministry "des Regions Liberees," would be interested in a large contract for such permanent houses as Canada can supply. The Government or at least the Minister of the "Regions Liberees" is not opposed to such a contract.

Carborundum Co Acquires New Plant

The Carborundum Company, of Niagara Falls, N. Y., has acquired from the Alien Property Custodian the plant formerly owned and operated by the Didier-March Company at Perth Amboy, New Jersey. The plant will be taken over at once and converted to the manufacture of a complete line of Carborundum Refractories which are now giving such exceptional service in a wide range of high temperature furnace work.

The principal business of the Didier-March Company was the manufacture of special refractory clay products and practically all

of its equipment is well adapted for the processes of the manufacture of Carborundum Refractories.

The plant is located on a site of twenty-four acres fronting on the Raritan River near Perth Amboy, New Jersey, and is well provided with wharfing facilities and railroad connections. It consists of a modern clay working and refractory plant with a capacity of over one hundred tons per day and covers a floor space of about three hundred thousand square feet. The buildings are of substantial brick, steel and concrete construction, and there is also included office buildings, laboratories and ample housing facilities for employees.

In addition to this property, the Carborundum Company acquires sixty acres of high grade fire clay lands at Bonhamton and a clay excavating plant in operation. The plant will be used exclusively for the manufacture of Carborundum Refractories for the entire field of high temperature furnace work.

Price Bros. Have Splendid Year

The activity in the lumber, pulp, and paper industries is reflected in the financial statement of Price Bros. & Company, of Quebec, for the year ended February 28th last. The figures constitute a record showing. The profits totalled \$2,055,782, an increase of \$568,821 over 1918, and \$681,000 in excess of that of the preceding period. After the payment of bond and note interest charges, there remained a balance of \$1,621,806 against \$1,053,981 in 1918, and \$711,452 in the 1917 report. Shareholders participated in the prosperity of the company during the year to the extent of \$690,684 in the form of dividends and bonus, compared with \$400,000 in the two former periods. An employees' pension fund was also inaugurated during the period, the sum of \$150,000 being set aside out of earnings for this purpose. In addition to the other advantages shareholders received a special distribution of \$1,540,000 out of the surplus earnings of the company accumulated prior to the first of January, 1917. After all deductions there remained a surplus in profit and loss account at the end of the year amounting to \$2,115,346, compared with \$2,874,234 in 1918, and \$2,220,239 at the end of the preceding year.

Is Car Shortage Squabble Over?

Representatives of Canadian and American railroads, in session recently in Washington ironed out the differences over delivery of freight cars, which were largely responsible for the recent famine of newsprint among New York and other Eastern newspapers, says a press despatch.

The acute situation was brought about by the failure of the American roads, due to strikes and bad weather, as well as alleged carelessness, to return cars to the Canadian roads. As a result, Canadian officials placed an embargo, refusing to allow more of their cars over the line.

The difficulty was prevented from becoming a delicate international dispute by the prompt action of the Canadian Railways Association, which sent C. P. Riddell here to confer with the officials of the Car Service Commission of the American Railways Association.

Following several conferences between Riddell and W. C. Kendall, Chairman of the Car Service Commission, both the Canadian and American officials declared they had reached a satisfactory understanding. Riddell stated that his organization would lift the blockade at once.

Use and Care of Wire Rope

The Canada Wire and Cable Co., Ltd., Toronto, have issued an illustrated booklet descriptive of their wire rope and fittings. This gives a short, concise description of wire rope, its use, methods of manufacture, material user, varied types of construction and other information. There is a particularly useful chapter on the "Care of wire rope." Users of wire rope will find the booklet of great value.

Western Mills are Short of Logs

There will be no heavy reduction in the cost of producing and marketing lumber, and in order to have a safe margin of profit it is not likely that prices will be reduced materially this year, according to Mr. T. A. Lamb, one of the new openers of the Brunette Mills on the Fraser River, B. C.

He pointed out that there is at present a great shortage of fir and cedar logs, and almost every mill in the country is operating at full capacity, so that there will be no surplus of logs this year. In regards to the mills, he said that the stocks on hand were further below the stocks of any previous time during the past ten years, and while there has been a falling off in American trade, due to the season, strikes and recent storms, the demand is still a very great one, especially from Eastern Canada, where B. C. lumber is always in demand.

Proposal Meets With Strong Protest

Business Interests Oppose Placing Discriminatory Tax on Unlicensed Insurance Companies

The proposed legislation at Ottawa to tax unlicensed insurance companies is causing various organizations and large business firms to enter vigorous protest with Sir Henry Drayton, Minister of Finance. It has been pointed out that the imposition of a discriminatory tax of 15 per cent. on premiums of insurance written by unlicensed companies, would cause an almost complete elimination of such insurance, and would at the same time yield the federal authorities no appreciable amount of revenue. If competition is the life of trade—and it undoubtedly is—many interests feel that the mutual companies should have no such handicap placed in their pathway, as is mooted.

It is stated that about 80 per cent. of the total insurance on property in Canada is already controlled by licensed companies, thus practically constituting a monopoly, and that a tax on unlicensed companies would virtually put them out of business in allowing the licensed organizations to have full swing. This would, it is contended, result to the disadvantage of the country as a whole.

The Canadian Manufacturers Association recently laid certain facts before the Minister of Finance. That body submitted that the value of the competition from unlicensed companies could scarcely be exaggerated. It had not only been responsible for a maintenance of reasonable rates, but had been an important factor in the reduction of Canada's appalling fire wastage. The attitude of the C. M. A. was summed up in the declaration that insurance is not a proper subject for taxation and that it is not in any sense a commodity. It was pointed out that an insurance policy is a contract under which the insurer agrees to pay a financial indemnity in the event of certain conditions arising, and, therefore, the taxes paid by licensed insurance companies cannot be considered as a levy on insurance. Such assessments are very properly imposed for the privilege of carrying on a profitable business and hamper the insurance companies to no greater extent than the taxes paid by other firms.

The Association also sets forth another feature which should not be lost sight of, viz., that, while the transaction of insurance with unlicensed companies involves sending considerable sums of money out of Canada, it also involves the sending of no small amounts into Canada through the payment of losses. The manufacturers believe that the harm done to the community as a whole through the imposition of a tax on persons taking advantage of the existing competition, would much more than offset the comparatively trifling revenue to the Dominion which such a tax would produce.

Mr. Huddart Returns to the South

Mr. C. E. Huddart has resigned as manager of the Associated Timber Exporters of B. C., Ltd., Vancouver. He belongs to San Francisco, and came to Vancouver last year. Mr. Huddart is returning to the South shortly to enter into the lumber export business there, where his operations will embrace the whole of the Pacific Coast.

In an interview he said: "We have on our books something over thirty million feet for export to foreign countries; we have several million feet now under offer and enquiries are coming in very strong. Indications are that there will be all the export business available that the British Columbia mills can conveniently take care of. We have recently closed orders for about twelve million feet of railroad ties and crossings similar to the large order we were working on last year for the British government. Regarding the prospects for a decline in timber prices, Mr. Huddart said: "There are no indications of any immediate change in export prices, except it may be in Japanese squares.

New Features in Workmen's Compensation Act

Compensation to injured workmen of 75 per cent. of the average wage with minimum of \$12.50 per week.

Pensions for widows of \$40 per month, with an additional \$10 per month for each child.

Increased burial expenses.

Provision for supplying artificial limbs and eyes to disabled workmen.

The foregoing are some of the important changes to be covered in the amendments to the Workmen's Compensation Act, brought before the Ontario Legislature recently.

The raising of the rate of compensation is the outstanding feature of the bill. At the present time the workman who is disabled received but 55 per cent. of his average weekly wage while away from work, and the labor men have for years been strongly advocating an increase. At present the scale of benefits under the Ontario Act is considered to be more generous than those of most

states, where workmen's compensation is in effect, and the new scale will make the Act of this province the most advanced on the continent.

With the increase in the compensation rate, the Government is dealing more generously with widows and dependents of men who lose their lives in industrial employment. At the outset widows received \$20 per month, with \$5 per month more for each child. Last season this was increased to \$30 and \$7.50 for each child. The increase, however, was only paid to those whose pensions were fixed after the change went into force. Now all widows drawing pensions under the Act will receive \$40 per month, with an additional \$10 for each child. Further, the widow will receive a lump sum of \$100 at the time of her husband's death in addition to burial expenses of \$125. At present only \$75 is allowed for burial.

Two new features are incorporated in the bill. A minimum compensation of \$12.50 per week is to be fixed, and injured workmen are to receive, free of cost, artificial arms or eyes.

Lumbermen Want More Harbor Improvements

The Government has promised a moderate sum for the improvement of the harbor of Montreal this year, at the request of the Harbor Commissioners. The lumber exporters have hopes that some further consideration will be given to their needs. Montreal has splendid shipping facilities, which are being improved year by year, but it is felt that something more might be done to facilitate the shipment of lumber, which is an important part of the trade of the port.

Vandalism in Lumberman's Office

The office of Senator George Gordon, lumberman, in the Angus Block, North Bay, Ont., was entered recently by some parties bent on destruction. Everything in the office was destroyed by being covered with dirt and daubed with red and black paint. Valuable papers also were destroyed and scattered around the room. A picture of Senator Gordon, hanging on the wall, was draped with black and daubed with paint.

Do Not Want Wood Box Houses

The Toronto Housing Commission Ratepayers' Association of the Coxwell avenue district was organized recently to protest against the proposal of the city to construct a type of house adjacent to them of what they claim is an inferior type of house.

The building of such houses on Stacey, Haig, Currie and Hanson sts. is protested. There are now a number of houses on these streets that have each cost at least \$4,000 to build. It was pointed out that the greater number of those who have built houses in this area and have spent considerable sums of money in improvements are returned soldiers.

Brown Corporation Buys Eastern Limits

The sale of the extensive Bersimis Limits was completed recently when the property was transferred from the Sherbrooke, Que., syndicate holding it, to the Brown Corporation, headquarters at Berlin, New Hampshire, who are the purchasers.

This property is located on the north shore, about sixty miles below the Saguenay, opposite Rimouski. The purchase was made about ten years ago by a Sherbrooke syndicate, including Judge Panetonn, C. Picard, Dr. Camirand, L. H. Olivier, Champoux Bros., R. A. Ewing and B. C. Howard.

The sale price is reported to be over a million dollars. It is understood the cost of the property was around \$400,000.

Alaska Forest Lands on the Market

The headquarters of the federal forest service at Portland, Oregon, have advertised for bids on 10,000 acres of forest lands in the Tongass district, Alaska. The lands to be sold under this order contain 100,000,000 feet of spruce suitable for making print paper, it was said, and the advertisement for bids marks the inauguration by the government of an effort to make pulp timber in the north available for manufacture into paper, with the hope of ameliorating the present shortage of newsprint.

Long Drawn Out Suit Over Timber

The record long case of the past twelve months in Victoria, B.C., ended recently when Mr. Justice Murphy reserved judgment in the case of W. B. Gerrard against Peter Lund et al over a huge tract of timber on the Alberni Canal that Gerrard took over to log, and alleges that all the timber proved not to be there.

D. S. Tait, for the Gerrard interests, claims that instead of finding 110,000,000 feet of timber on the property there turned out to be less than 80,000,000.

A Progressive Western Lumberman

Frank E. Harley, who is head of the London Lumber Co., Limited, is a member of the industry who is inspired by public spirit and a sincere wish to do something for the community in which he resides. For the past four years Mr. Harley has been a member of the London City Council, representing Ward No. 2, and last year was chairman of the Finance Committee. He is also on the board of the Western Fair and a member of the executive of the Ontario Commercial Travellers' Association. He has always taken a deep interest in the progress and prosperity of the Forest City, and has

Ald. F. E. Harley, London, Ont.

been identified with the London Lumber Co., which is a wholesale organization, for the past twenty-two years.

The London Lumber Co. specialize in native hardwoods, buying up the cuts of various mills in the western portion of the province. They also handle a certain amount of the lower grades of white pine and spruce for crating, boxing, etc.

Mr. Harley reports that the cut of maple, beech, ash, elm and basswood in Western Ontario will be larger this season than in any previous one during the past five years. Many farmers, owing to the high price of hardwoods, have got busy and cut a lot of logs which have been brought in to local mills during the past few months.

The London Lumber Co. has warked up a large business with furniture factories, piano firms, phonograph plants and builders of trucks, automobile bodies, etc.

Where Will Newsprint Prices End?

The newspapers, which have been denouncing the high price of all commodities and particularly paper, are now the victims of their own petard. No longer does federal control or regulation exist, and when the present mutual agreement between the publishers and the manufacturers expires, on July 1st next, the price of 4c per pound is likely to be increased from 25 per cent. to 50 per cent. and perhaps more.

The official organ of the Canadian Press Association does not mince matters in its last issue and accuses the press, and particularly the dailies, of extravagance, shortsightedness and recklessness. The same journal goes on to point out that sooner or later every paper in Canada, big or small, will be in direct competition with the buying power of the great metropolitan papers of the United States. Continuing, "Printer and Publisher" delivers the following straight-from-the-shoulder observation:

Papers have done little or nothing at all toward trying to save newsprint. There are cities where afternoon papers dash out on the streets with three or four half-baked editions per day, where the field would be well served by one well-edited edition, and a lot of paper would be saved.

How Clothes Pins Are Manufactured

About 20,000,000 feet of timber each year is used in the manufacture of clothes pins, said W. C. Hull of Tupper Lake, N.Y., in a recent address, and the annual consumption of these small articles is estimated at 1,500,000 to 2,000,000 boxes a year.

There has been no improvement in the art of manufacturing

clothes pins for forty years. For the last ten years there have been at least five inventions annually for improvements in clothes pins submitted to the U. S. Patent Office, but none, says Mr. Hull, has found any degree of favor with the housewives, who are still loyal to the old-fashioned wooden clothes pin.

Clothes pins are made in three lengths, 5, 4½, and 4 inch. The five-inch is rapidly going out of use, being used mostly on export orders. Eventually all pins will be four inches in length, continues Mr. Hull, as they are as strong and practicable as the longer ones. This saving in length and consequent saving in diameter is the means of conserving millions of feet of lumber.

That clothes pins are a luxury and not a necessity was evidenced by the late war. England uses 250,000 boxes annually, and in 1914 clothes pins were one of the first commodities placed on the embargo list, shipments not being resumed until the middle of 1919. Most manufacturers of clothes pins engage in the business with the idea of using up slabs and edgings but this is not practicable because when slabs are cut to the sizes of clothes pins they are mostly cross-grained and thus unfit for pin manufacture.

Strong Faith With Belated Reward

That the Canadian pulp and paper companies continue to show exceptionally large earnings is a statement made in the current issue of "Investment Items," Montreal.

"Those who had faith in this industry during the years of its protracted struggle against the difficulties of a limited market, inadequate shipping facilities and general apathy on the part of investors," it is added, "have a right to congratulate themselves that their faith has been justified. Their present reward is not excessive. It is well to bear in mind that a few years ago, several of what are now among the most brilliantly successful of the Canadian paper companies were actually struggling to keep their property out of the hands of their creditors—and in some instances were enabled to do so solely by the unwillingness of the creditors to take them over and incur the risks and responsibilities of management.

"There is nothing certain in the business world, except that he who puts his money into an enterprise of any kind is taking the risk of losing it, by reason either of bad judgment or of bad management, or of sheer unadulterated bad luck. The only compensation that he receives for this risk is the chance of enjoying the profits in case of success. If that opportunity is going to be taken from him, as there is now a general disposition to take it from him by means of a direct and discriminatory taxation upon success, there can be no incentive left for business enterprise of any kind. The state that claims the right to share in a man's profits when he is successful should also take upon itself the obligation to share his losses when he fails.

"A small proportion of the number of Canadian investors had the requisite confidence in the paper industry's future to invest their money in its securities in the days when it was in its pioneering stages and its future was obscure; and of these, no small number had to content themselves with a very moderate return, or no return at all, upon the capital for a number of years. The community did little for them in the time of their discouragement, and must not begrudge them to-day the benefits of their combined foresight and good fortune."

American Reprisals Are Short Sighted

Just because Canada does not wish to hand over her forests to her neighbors and because Canada and particularly Quebec, does not want anyone to despoil her forests of their riches in order to make other folk wealthy, our friends the Americans are uneasy and threaten us with reprisals by decreeing an embargo on the coal which they export to us. It seems to us primarily unjust on the part of our powerful neighbors to harbor such unfriendly designs against us; unjust, because they themselves would do the very thing that Canada and particularly Quebec is doing at the present time. Suppose for a moment that the fore riches which are the bone of contention were to be found on the other side of the 45th meridian instead of on this side and that Canada was making these demands can we not well believe that America would laugh at us and would not the Americans be vastly amused if our country was to charge them with ill-treatment in this matter? This is something of the feeling that we have today towards the United States. Their threat or rather the threat of one of their senators has no power to frighten us because we well know that it will never be put into effect. It is a poor way to treat such a good customer as Canada is to have recourse to an embargo. American journalists who seek to justify the attitude of some of their public men have declared that it is American capital that sustains and develops Canadian industry, but the Americans are well aware that the investments they make with us are paying good dividends and that their capital is safer here, than it is anywhere else, even safer than it is in their own country.—La Soleil, Montreal.

Real Live Wire in the Industry

Arthur R. Sanders, the newly-elected presiding officer of the South Western Ontario Retail Lumber Dealers' Association, is a son of R. Sanders, a veteran lumberman of St. Thomas, in which city the new president was born and brought up in. He spent several years in banking and lived for a time in western Canada, but since returning to St. Thomas, eleven years ago, has been associated with Sanders & Bell, Limited, as secretary-treasurer of the company, R. Sanders being the president and F. C. Bell, vice-president. The firm not only do a retail lumber business, but also operate a large planing mill and conduct general contracts. They have carried out some important jobs in Western Ontario. Mr. Sanders, Jr., is a live wire in the business and thoroughly believes in organization. Under his direction the South Western Retail Lumber Dealers' Association will doubtless continue to increase in interest and influence and have a very prosperous year.

Enterprising Company Extending Plants

The Carborundum Company, of Niagara Falls, N.Y., is to spend approximately half a million dollars in extending and improving its mammoth plant at Niagara Falls, and its two big furnace plants, one at Niagara Falls, Ont., and the other at Shawinigan Falls, Que.

The big building plan includes a three-storey addition to the paper and cloth plant at Niagara Falls, in which are manufactured Carborundum paper and cloth. Carborundum Brand Garnet Paper and Cloth, and Aloxite Cloth. This addition, which has just been recently finished, is 432 feet long and 81 feet wide, and will provide greater facilities for the storing and curing of all Carborundum, Garnet and Aloxite paper and cloth products, and for the extension of the rubber bonded wheel department.

Another addition, just completed, will extend one of the wheel-making and kiln departments, the new building being two storeys high, 96 feet long and 64 feet wide. Both of these new structures are of concrete and are of the most modern type.

Other big extensions and improvements have been planned and work will be started immediately.

British Columbia Fears No Timber Famine

Predictions of lumber and pulpwood shortage do not cause anxiety in the minds of British Columbians. Their peace of mind arises from the fact that the timber area of the province of British Columbia is 11,000,000 acres and is estimated to bear a stand of two hundred billion feet, says a recent despatch from Vancouver.

The Commission of Conservation of Canada estimates the total stand of timber in the province, regardless of present commercial value, at three hundred and fifty billion feet, covering an area of over 115,000 square miles.

The average cut for the past five years has been only 1,250 million board feet. With a stand of 350,000 million board feet of timber and with 100,000 square miles of land on which young forests are established and which if protected should produce 5,000 million to 7,000 million board feet per year, it will be seen that the forest resources of British Columbia could supply at least five times the present cut without seriously depleting the capital stock.

The logging industry of British Columbia is enjoying at this time a period of unequalled prosperity, and although it was seriously hampered during the summer of 1919 by serious labor troubles, the total cut is estimated at 1,400 million board feet. There is a great demand for British Columbia lumber on prairie markets.

The bulk of the labor used in this industry is composed of Scandinavian nationalities; that is, Swedish, Norwegian and Finnish.

The wage of a logger is from \$7.00 to \$10.00 per day. The average man who follows this line of work is able to earn more yearly than a college professor, a bank manager, and about three times the average salary of a minister in Canada or the United States, which shows that the white collar has ceased to be the badge of the higher paid man. Rather the red shirt and overalls are a more reliable indication of opulence in these strange days when brawn and industry are more urgently needed than brains and theories.

Conditions under which the men work in the camps throughout the province have changed greatly during the last decade. A few years ago as many as fifty men were housed in a single bunkhouse, perhaps 40 x 20 in dimension, with a stove in the centre, a rude rack or nails driven in the rafters providing the only means for drying wet clothing and laundry, and lighted by one or possibly two smoky, evil smelling oil lamps. These bunkhouses were usually ill-kept and vermin infested. The logger was compelled to carry his own blankets in a bulky bundle from camp to camp. The only bathing facilities

consisted of a tin basin and cold water laboriously carried from a nearby creek.

The hours were long—usually about eleven hours. There was no form of recreation or amusement provided for the men after an arduous day of hard, heavy, and oftentimes dangerous work.

Today all of the larger and up-to-date logging companies provide excellent quarters for their workmen. One may see long lines of especially built cars, 18 x 60 in dimension, which are divided into comfortable, clean rooms, accommodating four men each. They are heated by steam and special drying rooms are provided for drying wet clothing during the winter months. The rooms are well lighted by electricity and have four large windows. Sheets and blankets are provided by the company. These are laundered weekly and they do away with the blanket-carrying evil that was so common only a short time ago. The cars are provided with excellent bathing facilities, bath tubs and showers.

The hours have gradually been reduced to eight, thus giving the men time for recreation which is provided in the form of reading rooms and billiard tables, which are kept stocked with the latest periodicals and books on mechanical and civil engineering and other subjects of interest to men of a studious turn of mind.

Exports of Lumber from St. John

The following statement of exports of lumber from St. John to the United States for the quarter ending March 31, 1920, was issued recently by H. S. Culver, United States Consul:

Laths, 3,473½ M.P.C., \$36,893.05; lumber, 13,322 M. ft., \$471,528.05; pine boards, 435½ M. ft., \$15,946.12; pulpwood, 153 cords, \$1,629.90; shingles, 383 M.P.C.S., \$2,882.80; and wood pulp, 6,652 M. lbs., \$369,979.66, making a total value of \$898,859.58.

Does Not Favor Use of Hydroplane

Robert J. Grant, President of the St. Maurice Forest Protective Association, Three Rivers, Que., in his annual report, recently, said: A hydro-plane patrol was inaugurated this past season by the Association. Through the co-operation of the Quebec Government the Department of Naval Affairs at Ottawa loaned us two seaplanes to experiment in patrolling our territory. From the data obtained by the experiment this system has proved inefficient and rather expensive for the purpose of patrol work. The cost could probably be reduced by combining photography and transportation with the patrol work, but in my opinion I do not believe that this association should engage itself in any other work than Forest Protection.

Abitibi Company Starts Nursery

The Abitibi Power & Paper Co. of Iroquois Falls, Ont., have started an extensive plantation at Twin Falls. There a vast nursery has been planned and will soon assume imposing proportions. Twenty acres of land will be brought under intensive cultivation, of which 7,500 square feet will be seed-bed, the remainder being devoted to a transplant area. The seed planted this spring will yield 2,000,000 trees, but it will be from three to four years before these can be transplanted. It is proposed to supplement the work of the nurseries by purchasing 3,000,000, three to four-year old trees, with which to start reforestation proper at once. Norway and white spruce will be the principal species grown in the nursery, together with some ornamental trees which will be used to improve the town site of Iroquois Falls. R. H. Sands has been placed in charge of the nursery.

Add Six Yards to Retail Business

The Long-Bell Lumber Company of Kansas City, Mo., has added six yards to its retail interests. These yards were purchased from the Fullerton-Stuart Lumber Company. Three of the yards located at Beggs, Mounds and Keifer, Oklahoma, will be operated by the Long-Bell Lumber Company. Three of the yards at Henryetta, Boynton and Morris, Oklahoma, will be operated by the Minnetonka Lumber Company.

Busy Season in Cutting Ties

Austin & Nicholson, of Chapleau, Ont., during the past season took out 1,000,000 hewn railway ties as compared with 414,497 in 1918. Their production also consisted of 800,000 ft. b.m. sawn switch railway ties, as against 313,020 ft. b.m. of the same line during the previous year. It will thus be seen that in the matter of hewn railway ties and sawn switch railway ties, Austin & Nicholson in 1919 more than doubled their output of the previous year. In piling, the company's production is five times what it was a year ago. During the past season the amount taken out was 357,000 ft. and in 1918, 70,435 ft.

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 20 cents per agate line (14 agate lines make one inch). \$2.80 per inch, each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word, net. Cash must accompany the order. Minimum charge 50 cents.

Advertisements must be received not later than the 10th and 20th of each month to insure insertion in the subsequent issue.

Wanted-Lumber

Lumber Wanted

LUMBER WANTED to build 50 houses, 18 ft. x 24 ft.; 3 rooms and woodshed, clapboard and ½ in. hemlock; 2 in. x 3 in. studs, ¾ in. matched sheathing inside. Apply Box 210, Canada Lumberman, Toronto. 8

Spruce and Shingles Wanted

We are always in the market for Spruce boards and 2 in., also Furring, Lath and Shingles.

RICE & LOCKWOOD LUMBER CO.,
9-12 Springfield, Mass.

PULPWOOD

We are open to purchase peeled Spruce and Balsam Pulpwood in carload lots. Quotations furnished on request. Also Deal ends.

The Jost Company, Limited,
285 Beaver Hall Hill,
1-t.f. Montreal, P.Q.

Cedar Wanted

We want to buy clear Eastern Cedar lumber. We are always in the market for this. Let us know what you have now or may take out later. We also want clear cedar lath, special sizes. There is good money in cutting these. Write us particulars.

Peterborough Canoe Co., Limited,
6-11 Peterborough, Ont.

Basswood and Maple Wanted

Fifteen carload dry 1sts and 2nds or No. 1 Common and Better white winter cut Basswood, plump 1 in. thick.

Twenty carloads dry Hard Maple, 1¼" x 3¼" multiples of 9" and 12" in length, one clear face and square edges.

Twenty carloads Hard Maple, 6½" x 6½" and 5¼" x 5¼" x 22" and 26" in length or multiples, practically clear stock and free from checks; can ship green.

For further particulars apply to Box 85, Canada Lumberman, Toronto. 24-t.f.

WANTED

**Birch, Maple, Ash,
Elm, Basswood,
Beech**

and other Hardwoods, all grades and thicknesses. Will buy large or small stocks.

Will contract for large or small mill cuts. Inspection at shipping point.

Standard Hardwood Lumber Co.
Buffalo, N.Y.

9-10

WANTED

One Carload of White Ash Squares

1½ x 1½ x 14½", good clear stock. Send particulars to Canada Foundries & Forgings Ltd., James Smart Plant, Brockville, Ont., Canada. 10-11

Birch Wanted

No. 1 Com. and Btr., 4/4" to 16/4". Name us your best prices delivered here for dry stock. Will contract for mill output in Birch, Elm, Basswood and Ash.

WARREN ROSS LUMBER CO.,
10-t.f. Jamestown, N.Y.

Pulp Wood

We are prepared to buy unlimited quantities of peeled poplar and hemlock and peeled or unpeeled spruce and balsam pulpwood.

ADVANCES MADE

Thompson & Heyland Lumber
Company, Limited,
10-13 123 Bay St., Toronto.

WANTED

White Pine Spruce

ALL GRADES.

Also LATH of all grades

JOHN F. BURKE,
2-t.f. Aeolian Bldg., New York City.

Pulpwood Wanted

Wanted to purchase pulpwood in Nova Scotia, New Brunswick, or Eastern Quebec, for home consumption for Canadian Paper Mill.

Address stating price, quantity and location,

FRANK J. D. BARNJUM,
4-11 Annapolis Royal,
Nova Scotia.

Birch, Beech, Basswood, Maple and Other Hard- woods Wanted

Will pay spot cash on cars shipping point on any of the above; dry or green; log run or on grade. Will send inspector.

Wallace H. Partridge, Inc.

4-11 Springfield, Mass.

For Sale-Lumber

For Sale

4,000 cords 4 feet sap peeled pulpwood, Spruce and Balsam, containing about 90 per cent. Spruce, for immediate or next summer delivery, situated at Blue River, Canadian National Railway; 23½ cents to Watertown.

QUEBEC LUMBER CO.,
98 St. Peter St.,
Phone 329 Quebec, Que.
10-15

Hemlock Bark For Sale

150 tons for immediate delivery and 500 tons for delivery in July, August and September next.

Timber Areas For Sale

SEALED TENDERS, endorsed "Tender for Purchase of Timber Licenses," and addressed to Harry Vigeon, 2 Leader Lane, Toronto, Ontario, will be received until 12 o'clock noon on Tuesday, 15th June, 1920, for the purchase of licenses to cut timber on limits in the Townships of Brown and Wilson in the District of Parry Sound, Ontario.

The limits were recently cruised by Mr. David Sword of Parry Sound, who reported them to contain:

Hemlock, 25,420,000 ft.; Pine, 1,413,000 ft.; Birch, 5,445,000 ft.; Basswood, 2,176,500 ft.; Ash and Elm, 1,800,000 ft.; Spruce, 99,400 ft.

The limits are readily accessible by rail, and are well watered to the Pickering River.

The timber is of good quality, well bunched, and can be easily logged.

Further particulars, including copy of Sword's cruise, and blue prints showing location and quantities of the timber, can be obtained from the undersigned, with whom also arrangements can be made to inspect the limits.

Each Tender must be accompanied by a marked cheque on a Chartered Bank, payable to the order of Harry Vigeon, for an amount equal to 10% of the Tender, and must state the terms required for payment of the balance of the purchase price.

The highest or any Tender will not necessarily be accepted.

H. VIGEON,

2 Leader Lane, Toronto.

Toronto, 10th May, 1920.

New and Second Hand ENGINES FOR SALE

AT

Bargain Prices

One NEW 16" x 36" JENCKES CORLISS Engine, developing 144 to 194 H.P. on 80 to 100 lbs. steam pressure. Speed 82 R.P.M., Diam. Pulley 12 ft., face 22 in.; weight 10,000 lbs. Floor space 22 ft. x 10 ft. Weight of Engine complete 31,000 lbs. Sight Feed Lubricator, Oil Cups, Throttle Valve and Jenckes-Corliss Governor. Now being built and will be ready for delivery in 6 to 8 weeks.

One NEW 7½" x 10" JENCKES Saw Mill Type Plain Slide Valve Engine, developing 20 H.P. on 80 to 100 pounds steam pressure. Speed 225 R.P.M.; right hand; diam. pulley 40 in., face 8 in. Floor space 7 ft. x 4 ft.; weight 1700 lbs.

One NEW 4¼" x 5" H. P. TROY Vertical Steam Engine, complete with oil cups and throttling governor. Speed 300 R.P.M. Equipped with two 28" flywheels. Shipping weight 1100 lbs.

One 14" x 13" "LYCOMING" Left Hand Automatic Side Crank Engine Complete. Pulley 60" in diam. by 15" face. Slightly used and in good condition.

One Second Hand 9" x 12" JENCKES Saw Mill Type, Plain Slide Valve Engine, developing 30 H.P. on 80 to 100 lbs. steam pressure. Speed 200 R.P.M., right hand. Diam. of pulley 48", face 10"; floor space 7' x 4'; weight 2660 lbs. Sight Feed Lubricator, Oil Cups, Throttle Valve and Pickering Governor.

One NEW 12 H. P. JENCKES Vertical Tubular Boiler, 33" Diam. x 85" High. No. of tubes 52; length 4' 9", diam. 2" thick; shell 5/16", heads 3/8". Designed for 100 lbs. working pressure and to pass Quebec or Maritime Inspection. Complete with stack and all regular fittings.

One NEW 4 H. P. Vertical Fairbanks-Morse Gasoline Engine. Speed 350 R.P.M., water cooled, make and break ignition and governor, equipped with one plain and one adjustable friction clutch pulley, Symbol C-6860.

One NEW 4 H. P. Vertical Fairbanks-Morse Gasoline Engine, similar to above but without friction clutch pulley.

One Second Hand Motor Generator Set, consisting of a 6 H. P. Secor Oil Engine, direct connected to a 3½ K.W., 125 volt, 28 amp. Northern Electric Generator. This would make a fine lighting outfit for a large farm or saw mill and will handle 30 to 35 100-watt Mazda lamps or an equivalent number of smaller ones. Engine is equipped with governor, make and break ignition and pulley.

One Second Hand 4 H. P. Secor Oil Engine similar to above but without Generator. Complete with governor, make and break ignition and pulley.

For prices and detailed information regarding any of this equipment, write, phone or wire.

Will Spend Money on Lumber Publicity

To tell the world about British Columbia's unrivalled forest products, and in particular the famous Douglas Fir, Hon. T. D. Pattullo, provincial minister of lands, secured the passing of an appropriation of \$40,000 in the estimates by the legislature at Victoria. In urging the importance of the vote, the minister pointed out that it was only a year ago that there had been serious possibility of a general shutdown in the lumber industry through lack of demand. The department had sent the lumber commissioner to London, with

the result that large orders had been secured. When normal conditions were regained, such extension work could be greatly increased. The minister of lands found strong backing from a number of members, though there was some opposition to the vote, a motion to reduce it to \$10,000 being made by L. Giolma, soldier member for Victoria. Col. McIntosh, of Vancouver, took the somewhat peculiar ground that he was in favor of the idea of publicity to foster the lumber industry, but would defer initiating action until transportation facilities were more favorable to taking care of business. He claimed that the province should not advertise until it was able to deliver the goods. If a delay was made till next year he would even support a much larger appropriation. Mr. G. G. McGeer, South Vancouver, and Mr. M. B. Jackson, Islands, both strongly supported the \$40,000 appropriation. They both thought that the department of lands which dealt with all timber affairs, could do good work in popularizing B. C. timber products and increasing sales. Mr. Jackson compared the action of British manufacturers who kept up their publicity during the war, even though they were then unable to take orders, believing that continuous aggressive publicity was good business. He also impressed the point that while Canada, as a whole, is cutting more than the annual timber growth, B. C. is cutting but one-fifth the annual increase. Familiarizing the eastern buyer with the qualities of B. C. timber now was preparing for steady future trade. Mr. Geo. Bell, a Victoria member who had visited New Zealand last year, told the House that he had been told by a timber dealer there that most of his supplies came from the United States. Asked for the reason why Canadian and British Columbian lumber was not given preference, the New Zealander replied that the "Yankee goes after the business and conducts an aggressive advertising campaign."

Trade extension in B. C. timber is promoted by the department, through the agency of its lumber commissioner, by publications, and by motion pictures.

Review of Current Trade Conditions

Ontario and the East

General market conditions are rather quiet at the present time and there is on both the part of the whole and retail trade some slight slowing-down to what has characterized the general situation during the past few months. With the exception of certain lines of B. C. small dimension and shingles, which have been coming rapidly to the East owing to the United States demand having fallen off, and the embargo on C. P. R. cars still being in effect in the West, prices are holding firm and there is no indication of a drop. On the other hand, it is the opinion of some wholesalers that the top has about been reached. There is not likely to be any material alteration until the new stocks of lumber come on the market, which will not be for a few weeks yet. All the mills are now in operation and have a plentiful supply of logs. Several plants got under way much earlier than last season and are preparing for an unusually large cut.

The expense of manufacturing is climbing all the time as wages have advanced from 10 per cent. to 20 per cent. at most centres. There is practically none of last year's stock of hemlock, spruce, white or red pine at any mill points. Retail yards have not been buying extensively of late. This has been due to the backward spring and uncertain labor outlook in many industrial centres, and all shipments being diverted to Canadian customers owing to interrupted deliveries across the line by reason of the traffic situation.

Varying reports are received regarding building activity. Some architects declare that large contracts, for which rough estimates have been prepared and matters advanced to the stage of inviting tenders, have been cancelled at the last moment due to the excessive cost of structural material, wages, etc. While this may be true in certain instances, there are numerous big buildings in course of construction, particularly in the industrial line, and the cry for dwelling houses is as insistent as ever. With the recent May Day shifting of habitations the shortage became more painfully evident in all the larger centres. There is not much speculative building going on and a number of contractors declare that they will not undertake any additional work until they know exactly where matters stand.

Lath are somewhat weaker in price but this is naturally expected owing to the increased production now coming on the market, many mills having been turning out millions of pieces of white pine, spruce and hemlock for months.

The shingle market is rather uncertain at the present time and prices have taken a fall. This is caused by so many in-transit cars being sent from the West which have been held up at Cartier and other diversion points and the anxiety to escape demurrage. Owing to the demand for lumber from across the border not being so brisk, B. C. manufacturers have been sending through stuff pretty freely to the East. As Ontario, Quebec and the Maritime Provinces cannot begin to consume nearly all the production of the Coast mills, there is naturally an over-plus of stock just now.

It has been stated by some that there has been a "break" in market quotations but this is not true. Logs are still very scarce and high in price in the Pacific Coast province and the outlay for producing lumber continues to grow. B. C. lumber exponents are confident that, while there has been a considerable falling off, matters will right themselves just as soon as the demand sets in from the other side, and transportation conditions are ameliorated.

Prices on the 1920 cut of lumber in Ontario are still showing considerable increases over those of a year ago. The advances asked are from 30 per cent. to 50 per cent. higher on all softwoods.

Stocks of dry hardwoods are very scarce and the demand from all quarters continues firm and active. Values are holding their own, except maple is reported weaker. There never was as much hardwood taken out by farmers and others in Ontario as during the past season and every local mill yard is filled to capacity with logs, while portable mills are in operation at points where they have not been seen for years.

There are numerous inquiries from across the border for native hardwoods and much more shipping would be done if embargoes were raised, American cars more plentiful and railway troubles did not add to the uncertainty of delivery. However, it is expected from this out the transportation situation will greatly improve and that the blockades at Detroit and Buffalo will be raised.

While the future of the lumber market is being discussed with considerable interest, there are no pessimists and every dealer takes

a dispassionate view of the situation, feeling confident that 1920 is going to be a good all-round year in the lumber industry.

United States

There has been a slowing-up in the general market situation and consequently a curtailment of purchases. This tendency, which developed a few weeks ago, has been growing stronger for some time and is regarded by many as the beginning of a period of readjustment which will lead to conservation, stability and a general solidification of values. There are a number of interesting features now crowding themselves to the forefront, some of them favorable and others not quite so favorable. The trade is being faced by increased freight rates on the railways, car shortage, embargoes, strikes, labor unrest, heavy rains, and building uncertainty in many quarters.

There has been much moisture in the south which has put hardwood producers in a rather pessimistic mood. The majority of mills have been closed down by the steady downpour and manufacturers do not see much relief in the situation before June 1st. Precipitation has been reigning over a wide sweep and floods have taken place at many points. The hardwood production in the Mississippi deltas is somewhat disconcerting, but with the advent of more settled spring weather, conditions are likely to improve. In some quarters prices are showing a tendency toward weakening, but on most lines they are holding firm. The demand for softwoods has been rather light and retail yards throughout the country are fairly well supplied. The period at present is described as one of "watchful waiting" on both the part of buyers and sellers.

In regard to the hardwood situation, it is quite different from that of the softwood and does not depend so much upon building activity. The demand comes principally from the industrial plants and is, therefore, steadier as all the mills are very busy at the present time. Buyers for the big wood-consuming plants who have been delaying purchases for quite a while in the hope of better prices are showing some anxiety now about replenishing stocks, while the mills in the two largest of the hardwood producing territories are confronted with weather and labor conditions that will preclude the possibility of increased production for some weeks to come. Hardwood prices, therefore, are maintaining post-war strength with an upward inclination.

The export lumber situation is being discussed very much at the present time and the outlook is somewhat uncertain owing to a complicated state of affairs in industrial and political ranks in various countries.

In regard to an increase in rates on the railways, it is said that this will be put into effect just as soon as the Inter-State Commerce Commission can determine what advance will be necessary to assure the railroads a return of $5\frac{1}{2}$ per cent. or 6 per cent. on the value of holdings, and in view of the fact that the Government is paying the bill as long as existing rates fail to create a sufficient return, it is thought that every effort will be made to hasten the rate adjustment.

The Southern Hardwood Traffic Association, through its executive committee recently sounded the opening gun in the fight which is to be made on the rate advances which are to be proposed to the Interstate Commerce Commission within the next few days by the carriers when it adopted resolutions setting forth the position of shippers of hardwood lumber throughout the South and East regarding these forthcoming advances, of which it had been confidentially advised.

The association believes that the railroads, under existing conditions, are entitled to a substantial advance in rates, particularly if they are to be put in position to render prompt and adequate transportation service. But it is particularly interested in the methods adopted by the carriers in securing increased revenues and it is particularly anxious to see that there is no flat percentage advance in rates on hardwood lumber and forest products because it believes that such a system of advancing rates would destroy all existing relationships and result in complete disruption of business in these commodities.

One feature of the southern pine market undoubtedly is the export demand which, although as must be expected, is still considerably below normal, is asserting itself more and more strongly. Europe is still a slow and careful buyer, but with the improvement in pound sterling the United Kingdom is taking increasing quantities

and is counted on as a good future customer. Stocks offered at reduced prices on account of the more or less sluggish state of domestic trade have been freely bought up by exporters, who express themselves as very hopeful. The call for railroad material is reported also to be improving steadily, and orders originating from the industrial construction field are sizable. The yard trade remains dull in most of the populous sections of the country, as a result of present hesitancy to build homes in view of the high prices for labor and materials, and also because of unseasonal weather having held back the farm trade.

Great Britain

Business which on the whole has been rather quiet for some time is now reviving. The building outlook is still unsettled owing to labor troubles and the general uncertainty in the political situation. The need of houses is as acute as ever, and, while there are decided improvements in the settling-down process after the war, still more speed and momentum will have to be attained in the structural arena before lumber conditions will be stabilized. It is expected, however, with the advent of more settled conditions, trade will be enhanced considerably, and the outlook become more stabilized. Just at present the high prices are holding back a number of important matters. Values on the whole are very firm. As soon as consumers are assured in their own minds that the current prices are fully established, they will put more inquiries into the market. There are several railway orders now awaiting completion, and the wagon builders are also in the market for large quantities. Ordinary building sizes are in good demand, but there is a general tendency to wait for the early arrivals from the Baltic, except when the work is of special urgency.

In regard to hardwoods, there has been some falling off of late but the rising prices have for the present been halted. The trade has been very speculative in the past. Importers have had their desire for kite-flying in the timber line sufficiently satisfied, so that dealing in "futures" is no longer the pastime that it has proved to be for several months past.

Reviewing the situation, the Timber Trades Journal says,—The check in prices is, of course, due to the great improvement in the exchange between Great Britain and America, as with the rate on New York at nearly \$4 to the £ the cost of import is considerably reduced. Holders of stock, however, in this country are not nervous, as the output of hardwood cannot possibly be equal to the demand for this year. There are, of course, quite likely to be periods of temporary weakness, when nervous sellers may lose their heads, but those who take the long view of the market and keep fundamental facts steadily in their minds will not go wrong. Steady buying, as distinct from speculation, however, is the only safe course, as every merchant must be in the position to hold his stock if necessary.

Importers who have open water goods unsold are also actively engaged in trying to place as much as possible on c.i.f. terms. This method of selling not only eases their financial position, but by it they are enabled to pass on to their customers the troubles, if there should be any, attaching to the detention clause. C.i.f. prices are very firm, but it remains to be seen whether importers who have not sold will, just before the arrival of the vessels, make reductions in order to clear. It is thought by many merchants that they will do so, hence the tendency to hold off until the last moment. The consumption is increasing steadily, but the volume of business for importers is not so great as could be wished because merchants have now purchased fairly well. Contracts have not been made as far ahead as is usually the case, but this is accounted for by the high prices. There is so much room for a drop that most firms are inclined to wait and chance a further rise. The demand for building timber is increasing rapidly; 2 x 4, 2 x 3, 2 x 7, 2½ x 7, etc., are wanted in large quantities, but it is not so easy to place the odd sizes. Floorings are in great demand, despite the rising prices.

Recent advices from import centres say that nearly everyone is of the opinion that the top has been reached in market values for the time being at any rate, and with stocks coming in more freely from this out that eventually quotations will come down to a more reasonable level.

In regard to the arrival of yellow pine, a recent issue of a trade journal says the "Canadian Seigneur," from St. John, landed in the Carriers Dock a shipment of yellow pine of various size and gradings. The quality of this shipment ought to satisfy the receivers, being bright, clean, and exceptionally well manufactured. We understand that about 220 standards of the lumber is for account of the Canadian Lumber Co., Ltd., Liverpool, and is the well-known product of the Union Lumber Co., Toronto. The bulk of these goods are disposed of, having been shipped overland to St. John for shipment to fill urgent needs of yellow pine on this side.

Montreal Business Continues in Fair Volume

The Montreal lumber market has picked up a bit. The majority of wholesalers spoken to express great confidence in the maintenance of prices, although here and there one comes across a doubting Thomas. One wholesaler declared that he looked for still higher values next season. This is a long way off but, as he pointed out, the factors which govern prices mainly occur in the fall. The outlook for prices of provisions and other camp supplies is all in favor of an advance—wages will not come down, and there does not appear to be any influences which will make for a drop in quotations.

Local business is better. Most of the yards have low stocks, having bought sparingly of late. The building permits continue to show substantial gains. For April the total was \$2,858,165, a gain of \$2,411,695 over 1919; for the four months the total was \$4,417,651, an increase of \$3,631,079. The reports from the province are optimistic as to construction prospects.

The American car situation has improved. A fair number of lumber orders from over the border has been received, and the volume of trade would be appreciably larger if foreign cars were available.

There is a little improvement in the B. C. section. Prices are still, however, on a lower level than recently prevailed.

Lath continues a good market, with a strong demand for all offerings.

Pulpwood commands a very high price, in line with the extraordinary value of ground wood. It is almost impossible for dealers to secure any pulp wood, which has been snapped up. This shortage will mean that some of the American paper mills will have to close down.

Sash and door factories have a fair amount of work on hand. William Rutherford & Sons Company have received a unique order. It is for the sashes and doors and interior trim for a single house for a Scotch owner, who says that even with the heavy freight charges, such materials can be bought cheaper in Canada than in the Old Country.

The export business to the United Kingdom has now commenced, although so far little lumber has been shipped. The British Government lumber is being sent in small quantities from the Maritime ports. The steamship companies have arranged for a large number of vessels to call at Montreal. Freight rates are still very stiff, 300 s. per standard being the general rate from this port.

EDGINGS

Ontario

McFadden & Malloy, of Blind River, are constructing new Dutch ovens at their sawmill.

The McChesney sawmill on the Mattagami river was destroyed recently by fire of an unknown origin. The loss is about \$10,000.

Oke's planing mill, Whitby, conducted by Mr. R. G. Oke, has been taken over by the Whitby Brick and Clay Products Company.

Ontario Tie, Timber & Construction Co., Limited, of Timmins, Ont., will not build a sawmill this year in Timmins, as reported some time ago. The construction of the plant has been postponed indefinitely.

It is understood that the Royal Securities Corporation of Montreal have acquired the buildings and lands of the Gilmour & Hughson Lumber Co., Hull, Que., and will erect a pulp and paper mill on the Gatineau River near Chelsea.

The Reliance Lumber & Builders' Supplies, Limited, of which W. H. Hubbard, 231 Wright Ave., Toronto, is the head, has recently been incorporated with a capital stock of \$40,000. The company will handle lumber and all building supplies.

E. J. Zavitz, provincial forester of Ontario, has sent out notices that an Order-in-Council has been passed changing the close season from April 15th to commence May 15th in the northern division of the province, after which date permits to burn must be secured from the fire rangers.

The MacKenzie Land & Development Co., Limited, Fort William, Ont., have been granted a provincial charter to operate sawmills and carry on a business dealing in lumber, timber and pulpwood. The capital stock is \$50,000. H. H. Beeman, and Stuart MacKenzie, Fort William, are two of the incorporators.

The Parry Sound Wood Turners, Limited, Parry Sound, were recently granted a provincial charter to conduct a general woodworking establishment as wood turners, manufacturers and dealers in lumber, timber and pulp wood. Capital \$40,000. Among the incorporators are H. J. Black and C. C. Johnson, manufacturers, both of Parry Sound, Ont.

The building permits issued in London during the first four months of the present year total \$384,000. For the corresponding period last year they amounted to \$254,845. The record so far in 1920 has been unprecedented in the matter of structural activity so far as the Forest City is concerned. The permits in April alone amounted to \$211,510.

A recent despatch from Fort Frances says: Six hundred timber workers are out on strike in International Falls, but the Fort Frances mills are not affected by the walkout. All the mills in Minnesota, Wisconsin and Michigan have closed operations. A low estimate gives 20,000 timber workers as being idle. Conditions in the camps are orderly and quiet.

Mr. W. E. Patterson, jobber for the John Carew Lumber Co., Lindsay, who had a camp of 35 men in last winter, has returned from Bobcaygeon to the scene of his winter's labors to start cribbing the cut for the summer's drive. Mr. Patterson cut about 35,000 pieces of white pine and states the Carew Lumber Company have had about 200,000 pieces cut during the winter by various jobbers. He is paying \$110 a month for river drivers and hopes to have the full cut towed up through the Bobcaygeon canal before it shuts down in the fall, and sufficient to keep the mill running till the new canal opens for traffic again two years hence.

A recent despatch from Ottawa says: A demand on the Provincial Department of Health, that it enforce the regulations governing the sanitary control of lumber camps throughout the Province of Ontario, will be made on Hon. Walter R. Rollo, within the next few days, by Mr. E. Winch, secretary of the Lumber Workers' Industrial Union, which is affiliated with the One Big Union. Mr. Winch made the charge that not one lumber company in the Province of Ontario attempted to conform with the Government regulations governing camps, and the officials of the Department of Health were not trying to enforce the regulations. The lumbermen generally deny the allegations of Mr. Winch.

Eastern Canada

Joseph Lamache is erecting a new sawmill at Bell River, Pontiac County, Que.

The general wage increase in many sawmills in New Brunswick ranges from twenty to thirty per cent. over last year.

The Laurentide Company, of Grand Mere, Que., will erect a sawmill at Cap de la Madeleine, Que., on the St. Maurice River.

The Brown Corporation of Berlin, N.H., have completed the purchase of timber limits near the mouth of the Saguenay river for \$1,000,000.

The Riordon Pulp & Paper Co., Limited, Montreal, were recently authorized by supplementary letters patent to increase their capital from \$6,000,000 to the sum of \$7,500,000.

W. B. Baptist, V. Burrill, and G. E. Baptist, lumber merchants, Three Rivers, P. Q., are among the incorporators of Soil Pipe and Fittings, Limited, with a capital of \$140,000.

Six million feet of logs for the Nashwaak Pulp and Paper Co., St. John, and two million feet for the Fraser Companies, have been brought down the Bartholomew, a branch of the Miramichi river, so far this spring.

The slack mill of the sulphite works of the E. B. Eddy Company, Hull, recently caught fire. The blaze was soon under control and the greatest damage done was in the electric wiring, which was badly burned and torn down.

The Bridge River Timber and Manufacturing Company, Limited, Montreal, has been recently incorporated to carry on a general lumber business. Mr. Patrick Donnelly and Mr. J. S. Rodgers, who were formerly connected

with the Bridge River Timber Company, Limited, British Columbia, are associated with this new company.

The Talc Development Co., Limited, Montreal, were recently granted a federal charter to conduct a general lumber, timber and pulp-wood business. Capital \$75,000. L. McFarlane, K.C., and W. B. Scott, Montreal, are among the incorporators.

The W. A. Marshall & Co. of Canada, Limited, Montreal, have been incorporated to manufacture and deal in lumber, timber and wood products of every description. The capital stock is \$25,000. Among the incorporators are F. P. Brais and L. M. Smith, both of Montreal.

A new five hundred horse power engine has been installed at the Victoria mills, Fredericton, N. B., the local plant of the Fraser Companies. The mills have just begun operation. The cut this season will be a big one. Mill wages have been advanced about twenty per cent. on the average.

The Edmonton Vandette Oil Co. of Canada, Limited, Montreal, were recently granted a federal charter to carry on lumber and timber operations in connection with their oil business. Capital \$50,000. Two of the incorporators are E. Vandette, of Edmonton, Alta., and M. A. Menard, of Ottawa.

The contract for the construction of the Fraser Memorial Hospital at Fredericton, N. B., has been let to a Montreal firm. The building was provided for by the late Donald Fraser, who founded the business now known as the Fraser Companies, Ltd., lumber and pulp manufacturers, Edmundston, N. B.

A new lumber concern, known as Read, Smith & Mitton, has been organized at Upsalquitch, N. B. The company will conduct a general lumber and timber business. H. C. Read, of Sackville, H. W. Read, of Stonehaven, manufacturers, A. E. Smith, of Bathurst, and H. N. Mitton, of Bathurst, lumbermen, constitute the partnership.

Stanley Douglass, Fredericton, manufacturer; Morris R. Perley, Devon, accountant; and J. J. Fraser Winslow, Fredericton, barrister, have been incorporated as Stanley Douglass, Limited, to carry on in all its branches a lumber, timber and pulpwood business, and to manufacture, produce, buy, sell and deal in timber, logs, lumber and wood of all kinds. The capital stock is \$180,000, and the head office at Devon, York Co.

The Fraser Paper Company's bill has been passed by the Corporations Committee of the New Brunswick legislature, a satisfactory agreement as to the handling of lumber at the proposed dam having been reached recently by the companies interested. When the Fraser Paper Company's bill was before the committee a few days ago, it was intimated that there would be some arrangement under which the supply of pulpwood for the new pulp and paper mills to be erected by the Frasers at Tobique Narrows would come very largely from the New Brunswick railway lands, and it is understood that a satisfactory arrangement will be carried out to this effect.

The firm of H. P. Eaton & Sons, Fredericton, N. B., has been reorganized by the formation of a new corporation capitalized at \$400,000, to be known as the H. P. Eaton & Sons Company. The new corporation takes over certain timber lands on the St. Croix and elsewhere, mills, vessels, etc., of the old firm, the property as previously announced having been purchased by Edward B. Draper, of Bangor, and others. Phil R. Hussey is president, Wm. D. Hayes treasurer, Lewis B. Barrett; Wm. D. Hayes, P. R. Hussey and N. Barrett directors. The controlling interests have also organized the Passamaquoddy Land Co., which will be the holding company for 262,000 acres in Maine and New Brunswick. These lands will supply pulpwood to three mills. D. A. Crocker is president of the Passamaquoddy company, Chas. F. Hutchings, Mr. Draper and F. E. Bragg directors.

Western Canada

A sawmill is being erected at Copper Creek, in the Kamloops district, by Messrs. Case and Lindsay.

The new Cowichan Lake Shingle Company has opened its mill at Cowichan Lake, Vancouver Island, and is shipping shingles regularly.

A syndicate of Winnipeg business men is starting a wall board factory in Selkirk, Man. It is expected that a large quantity of straw which is now burned will be used in the industry.

A. C. Mackintosh, president of Fibre Cases Limited, Vancouver, B. C., was in Winnipeg recently with the object of starting a wood fibre box factory in that city. The company will employ at the start about thirty hands.

The Red River Paper Mills, of Norwood, Man., will soon be in operation. This will be the first industry of its kind in the prairie provinces. The equipment is now being placed in position and the company will make bogus wrapping paper from old paper stock entirely.

A postoffice is to be established at Mill Creek, Howe Sound, where one of the Whalen pulp mills is located. Owing to duplication of names the department has refused to accept the old cognomen of Mill Creek but has accepted the alternative name suggested by the company, which is "Woodfibre."

The Pacific Roofing Company of Vancouver, has entered action against the Whalen Pulp & Paper Mills, Limited, for \$16,437. The amount is made up by increases in the market price of the paper which the defendant company is alleged to have failed to deliver. The contract price was \$70 a ton and the quotation is reported to have increased since that time to \$132.50 a ton.

Educational work to promote lumber export trade carried on by the trade extension branch of the Department of Lands of British Columbia will be continued. The Government of the coast province asked for a vote of \$40,000 to carry on this work. Some opposition developed by reason of the underproduction of the lumber industry of B. C. and the inability to satisfy all the foreign demands. The Government intends to carry on an energetic campaign, however, to educate eastern and foreign buyers in the value and uses of British Columbia timber.

Secretary Gigot, of the Nelson Board of Trade, has made a report, in which he states that J. H. Haslam, who had inquired some months ago regarding the opening of a pulp mill, had acknowledged the receipt of the information sent him and further data would be forwarded to him. Mr. I. R. Poole, secretary of the Mountain Lumber Manufacturers' Association, stated that there had been a pulpwood survey for a private concern, but that the information was not available for the public. The question of completing data on the possibilities in this line of enterprise was referred jointly to the mining and industrial committee of the board, as well as to the natural resources committee.

"Hamilton" Steam Tension Band Mill

(Single or Double Cutting)

SPECIAL FEATURES OF THIS BAND MILL

- 1—Tension on saws maintained by steam—quickest and most sensitive form of tension yet devised.
- 2—Top wheel supported both above and below mandrel.
- 3—Extra large mandrel bearings top and bottom.
- 4—Top wheel has 12-inch range of adjustment.
- 5—Unbreakable upper saw guide raised and lowered by steam—first used on our machine.
- 6—Both top and bottom wheels instantly aligned by screw adjustment.
- 7—Operating mechanism is rapid and power driven.
- 8—Takes saws 12 inches to 14 inches wide.
- 9—Extra heavy, rigid, strong and accurately built throughout.
- 10—Built by expert workmen in a plant that has been manufacturing high grade saw-mill machinery for over sixty years.

The Northern Lumber Co. of Cloquet, Minnesota, has for years been using our babbitt metals. Here is what their Chief Engineer wrote about Aluminium Genuine Babbitt:—

"In one instance. I used your Aluminium Genuine on a 7" crank pin of a 30 x 48 Corliss Engine. It has been running two seasons at 85 R.P.M. and has never warmed up once and wedge block has not been drawn up to exceed 1/8 of an inch."

Real evidence of this character from a practical man is worth more than volumes of "just talk." Aluminum Genuine Babbitt will run cool under any speed; it will stand up any pressure or impact. Shall we send you a sample bar?

United American Metals Corporation

Makers of Syracuse Babbitts

DIAMOND ST. & MESEROLE AVE., BROOKLYN, N.Y.

50 years of just plain "Know How"

have developed Huther Brothers Saws to a point equalled by none others on the market. This is especially well represented in our Patented Dado Head which is a most amazing means of simplifying intricate cutting.

It consists of two outside saws, each of which is a groover in itself, and as many inside cutters as necessary to perform the required cut.

This Dado Head cuts perfect grooves, either with or across the grain, and does not leave rough edges as is the case with ordinary groovers.

We will gladly send you a Dado Head on approval which you may return at our expense if unsatisfactory.

Prestige that Dates Back to the Pioneer Days of the Saw

Among our vast assortments of:

Solid Tooth Circular Saws
Mitre Saws
Dado Heads
Solid Plate Groover Saws
Matcher Cutters
Lock Corner Cutters and
Specially Ground Circular Saws

you are bound to find a saw for every kind of woodworking you do.

FIRE BRICK

We make several brands of fire brick made by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best adapted fire brick for your boilers, dutch ovens, refuse burners, kilns, etc.

We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse, which enables us to ship at once.

We manufacture the following well-known brands:

"Elkco Special," "Elk Steel,"
"St. Marys," "Keystone" and "Rotex"

Write for copy of our catalogue,

—And, saving Power, save you Money.

That's really the end we're all striving for.

So that it doesn't matter much whether or not we pay a little more in the beginning so long as we are assured of the one result in the end.

That's the idea we had in mind in producing "Gibraltar RedSpecial" Belting.

We felt you would be willing to pay a fair price in return for "extra" value.

We made this Belt irrespective of cost—made it so good that the demand became great enough to allow us to set a price not out of the way in comparison with inferior brands and the prices asked for them.

Set a price that would net you a real saving on account of the long life and satisfactory service this belt will render.

"Gibraltar RedSpecial" is a cling-to-the-pulley Belt. That's one of its improved features. It has to do with that tough wear-resisting, friction surface, a non-wearing rubber, long-thread cotton combination that will resist water and dampness as well.

The stretch to this belt is of so little consequence users tell us they haven't had to "take it up" in several years of onerous service in places where it would seem almost impossible to use Belting.

A big percentage of the orders going through the factory are repeats from those who have tried its worth.

You are welcome to the experience of our Belt Service Department.

Also Makers of High-grade Packing and Hose.

Remember this: "Gibraltar RedSpecial" is covered by the broadest guarantee issued by any manufacturer

The G. Walter Green Co., Limited

**Manufacturers of
Saw, Shingle, Lath Mill and
General Machinery**

This cut represents our No. 2 Bolter, which is specially designed for cutting up small round timber into lath bolts, broom handles, pickets, short lumber or, in fact, anything that could be manufactured from small cheap material.

The machine is made quite rigid, the mandrel being 1 11-16" steel, the drive pulley 9 x 8. On our standard machine we supply a 24" saw. The carriage, which is automatic, is driven by a positive friction feed, and can be controlled by hand the same as a saw mill.

We also build this bolter with lath mill attached. This machine is known as our No. 2 combined Lath Mill and Bolter.

DUPLEX TRUCKS

BUILT FOR BUSINESS

The Duplex Limited

*High Speed—Pneumatic Tired—Medium Capacity—Full Electrical Equipment
—Here is a Truck That Does Its Work Economically*

ONE of the significant developments of these times in the truck industry is the increasing tendency for men to buy their trucks—and to let fewer and fewer be sold to them.

Look at the success of the Duplex Limited. Already it is an established success—with a steadily growing demand coming from all sections and from men in all lines of business.

If you contemplate buying a truck of medium capacity, look over the Duplex Limited. Have your local Duplex dealer show you the Limited. Note its wonderful ruggedness and mechanical superiority.

It is a Duplex through and through—and as such a very safe investment for all general hauling.

EVER SINCE the Duplex 4-Wheel Drive has been on the market, it has enjoyed a special kind of preference among lumbermen.

In the experience of hauling green lumber from forest to mill Duplex records have no equal in the industry.

The principal reason is that the Duplex hauls on all four wheels *together*, or any wheel separately.

As long as a Duplex can find traction the front wheels will pull and the rear wheels push the load.

Another advantage that is highly appreciated by the lumberman, is the extraordinary fifteen and one-half inch clearance over ruts, stumps and stones that, as a rule, seriously impede the going of the rear wheel truck.

Buy your lumber truck on the evidences of actual experiences in this most difficult of hauling tasks.

W. C. BESS

DEALER IN YELLOW PINE AND
HARDWOOD LUMBER
ALAVISTA, VA.

Gentlemen:

In answer to your inquiry of some days back asking about the satisfaction with which I have operated a Duplex Truck, I take pleasure in saying that after operating this truck since November, 1917, I feel that I venture nothing in the statement that it is *the* truck for heavy hauling. I have been hauling a distance of 10.6 miles and a part of the road is unusually bad for dirt roads—very heavy grade and poor roadbed, but we have been handling 4,500 feet of green oak lumber, approximately 25,000 pounds per day, at a cost of \$3.50 per thousand feet. The same lumber, if hauled by a team, would cost \$8.00 per thousand feet.

Yours very truly,
(Signed) W. C. BESS

The Duplex dealer sells on business facts and proven performances. He is ready to offer you a preferred investment in hauling rather than so many tons of motive capacity.

Duplex Truck Company

Lansing • Michigan

One of the Oldest and Most Successful Truck Companies in America

Lashing an awkward load of yellow pine to Packard Truck. Can the typical assembled truck, built to meet a price, be depended upon to maintain this kind of service, day after day?

What Does it *Actually* Cost to Haul a Thousand Board Feet One Mile

LITTLE use for the Lumber Man to buy shrewdly and to develop speedier methods of loading and unloading if he has to depend upon guesswork for his hauling costs.

More and more the thinking truck owner is coming to keep precise, accurate figures on his trucks and to use them as a basis for his purchase of new equipment.

The Packard people do not pretend to authority on any subject except *transportation*. But they *can* show the American business man *records of savings in trucking costs*—10 per cent in gasoline, 18 to 22 per cent in time, up to 30 per cent in ton-mile cost.

They can show him, too, how

to apply the same methods to *his own business*.

Packard has done away with excess costs in gasoline, not only through the remarkable ability of the Packard Truck Engine, but especially by means of the Packard carbureter.

Here is a carbureter built especially to stand the vibration of a truck at work. The float feed positive and *precise*. The carbureter water-jacketed and mounted high up on the cylinder *bloc*; so that the gas is warmed by the motor, and fed to the engine ready to flash into power.

Packard does away with excess friction and oil wastage, by the precise and positive *align-*

ment of parts from end to end of transmission.

It saves oil again by the *close fitting* of pistons and rings—and by preventing loss of oil through drip.

It saves tires by *distribution of load*, by the positive and uniform action of the clutch—in fact, by the engineering design of the *whole Packard rear end*.

Dynamometer tests on Packard Trucks show that the Packard delivers 86 per cent of *Engine-power* to the rear wheels on *low gear*, and 94 per cent on *high*.

The practical Lumber Man will see the significance of these engineering facts in keeping down the cost per mile of his hauling.

LION ROYAL

BEARINGS

The bearing is one of the most important parts of machinery—this is true in any industry—and the Lumber Trade is no exception.

Line your bearings with scientifically made Babbitts alloyed under the "Stanley Process." It is an elemental fact that there is less friction generated by high grade babbitts;—when friction is lessened, the wear and tear on your machinery is diminished.

Babbitt is designed to avoid friction. A scientific alloy accomplishes this best by its smooth homogeneity.

Specify "Stanley Process" Babbitts

Bell Locomotives

For the speedy and economical haulage of lumber

Will operate on kerosene, fuel oil, distillate or crude oils

Bell Locomotives are taking an important part in the development of the lumber industry in Canada. They may be seen in every district where important progress is being made—doing their work with the speed and economy that has given them their widespread popularity.

A fifty per cent. greater tractive power over the direct connected type locomotive of equal weight, is what we claim for the "Bell." They are absolutely reliable in every respect, and are easily kept in perfect running order.

Sizes 2 to 24 Tons

Original "Dunbar" Machines

We are the original and the only makers of "Dunbar" Shingle Machines, Lath Machines, Clapboard Machines, Steam and Gasoline Logging Engines. Each is the best for its particular work. Are you using the best?

Lath Machine

From our many years of experience we evolved this "Dunbar" Original Lath Machine. Every improvement that could be suggested, every time-tested idea for the betterment of product and for greater speed, has been incorporated in this machine. We believe it has no equal, and there are a great number of mill men throughout Canada who share this belief with us. Carefully constructed of high grade materials and designed to work steadily under the hardest conditions.

Steam and Gasoline Logging Engines

Conditions in Canada necessitate an engine that will stand any amount of strain and hard work in the lumber industry. With this idea in mind we have brought out the "Dunbar" engines perhaps a little stronger than is really needed. They do their work easily and willingly, and stand a great amount of hard usage. Built entirely in Canada for the Canadian lumber trade.

Clapboard Machine

You will need no excuse for the quality of your product if you use the original "Dunbar" Clapboard Machine. Expert in every detail. This machine will give you the very best service under most trying conditions. It will turn out work without delays. It will need practically no repairs and will increase your output. We cannot recommend it too highly because it is giving this very service to lumbermen in all parts of this country.

Send for catalogues of any or all of these machines.

Would You Spend \$575 to Save \$2,000?

Last Fall a certain lumber concern in Ontario purchased a small 10 H.P. Double Drum Belt Driven Hoist from us for handling logs. This machine cost them \$550, plus \$25, freight, total \$575. They operated this small Hoist by a belt from a gasoline Engine, the whole making a light, compact, portable outfit, easily moved from place to place.

They were able to work this outfit in the coldest weather, and found that it did the work of three or four teams.

As it required only one man to operate the Hoist, it is easy to figure the daily saving effected by the use of this machine. In other words, compare the wages and board of one man and the cost of a little gasoline with the wages and board of four drivers and the feed and upkeep of eight horses.

This machine handled up to one thousand logs per day.

We make these machines for either Steam or Gasoline Power, and in 7 sizes, one of which should be just right for your use.

GOODHUE BELTS

"Acme Waterproof" Leather Belting

This brand is especially well suited to the wet places in a saw or pulp mill and will run true as long as it is in service. When you are overhauling your mill equip it with "Goodhue Belts" and you will never regret it. They are honestly made of solid leather—every inch a good belt and they won't stretch.

DISSTON-SAWS

THE BEST KNOWN SAW IN THE WORLD

Each year finds a greater number of leading mills using Disston Saws exclusively. Mill operators know that the success of their mill—the quality and quantity of lumber they turn out—depends on the saw they use.

It is natural, therefore, for them to choose Disston Saws—the acknowledged standard in quality for 80 years.

Home in Kingston Roofed with Brantford Asphalt Slates

Beauty, Fire Resistance, Economy Combined in this Roofing

THE roofing that is being sold more and more throughout Canada, not only for barns and small buildings, but for the most expensive homes, churches, golf clubs and public buildings, is Brantford Asphalt Slates.

Brantford Asphalt Slates are made from a special grade of long fibred felt which is exceedingly absorbent. This is thoroughly saturated and coated with Asphalt and surfaced with crushed slate, which is embedded so firmly into the Asphalt that it cannot even be kicked off with the heel. This makes a splendid surface of beautiful reddish brown and dark green—a surface that never fades.

This grade of roofing is sold in three different forms. Brantford Asphalt Slates, Brantford Asphalt Slab Slates and Brantford Crystal Roofing.

The Slabs are really 4 slates in one and save time in roofing a large building.

Crystal Roofing is the same material as the Slates, only in roll form, and is especially adapted for barns and out-buildings requiring a permanent protective covering.

Asphalt is one of the most water-proof materials known, and Brantford Asphalt Slates being non-absorbent do not become water soaked or rot, neither do they crack nor fall off. They possess one great advantage over any other roofing made in that they cement together under the heat of the sun and form a solid, pavement-like surface on the roof, under which no rain or snow can drive, and no individual slates become loose or fall off. Highly recommended by prominent and experienced builders.

Brantford Asphalt Slates

will be used extensively in the future, and will play a big part in the great Period of Reconstruction which is just beginning.

Lumber dealers will find this a most profitable line to handle. Customers will buy it when order-

ing lumber, and it not only develops into a profitable sideline, but also brings new customers and helps increase your lumber sales. At least put in a small stock of this roofing. You'll need no urging to send a large repeat order.

Let us send you full information, prices and samples

Elevated Steel Water Tanks Provide Real Protection Reduce Insurance Rates

Our All Steel Elevated Water Tanks will not rot out, leak, burn or burst—they last a lifetime, and operate successfully in the coldest latitudes.

CANADIAN CHICAGO BRIDGE & IRON CO., Ltd.
MONTREAL, QUE., 260 St. James S'.
BRIDGEBURG, ONT., 140 Janet St.

**"It's as wrong to
Slop over as to leak"**

A 30" Neptune Brand Double Leather Belt which has already been in service 10 years in the Thomasville Electric Light Plant, Thomasville, Ga. Neptune is the Pioneer Waterproof Oak Tanned Leather Belting.

THAT was the criticism a famous mathematician used to make of careless work in his classroom. It applies to losses in power transmission through "overbelting."

Unless your belting is working under specifications laid down by engineering practice it is probably spilling or leaking a part of its power load.

One hundred per cent. results can be obtained only

through using the one right quality and size of belt on each specific drive. Guesswork in handling your power transmission is a costly variable.

In order that belting users might enjoy full results from their investment the Graton and Knight Standardized Series of Leather Belting was built up. It is standardized in its manufacture and in its application. It will supply the right belt to meet every power transmission need.

Write for our book "Standardized Leather Belting."

LUMBERMEN'S

EQUIPMENT

THE IDEAL TRIMMER FOR THE SAW MILL

The photograph shown below illustrates our No. 2, two saw Right Hand Trimmer, and is what is generally conceded to be the standard for a left-hand saw mill.

The Frame, Feed Works, Tail Sprockets, Saw Mandrels, etc., which compose this device are made of the highest grade material and ensure long, uninterrupted service.

The whole machine is substantially

constructed throughout and built to give maximum service at a minimum expense.

The standard machine will trim stock 5" thick and from 6 to 18 feet long, but can be made to trim heavier, as well as longer material if required.

This machine is also made in the Left Hand model for a right hand saw mill.

NEW CHAMPION EDGERS

For Fast and Accurate Cutting

WATEROUS NEW CHAMPION EDGERS are built with 40", 48", 56", 60" and 72" opening. They carry as many as four movable and two stationary saws without difficulty.

These edgers cut true and to dimension at all times. The guides are rigid and cannot shift in the cut. They are crowded to correct position and held immovably in place by a steel setting gauge that drops upon them. No other Edger has this feature.

An Edger for 6" Cants.—You can put a 6" cant through this edger and know it will come through edged to a hair. Edger carries 22" saws, 6" saw collars, leaving 7" clear saw blade, more than enough margin for 6" stock.

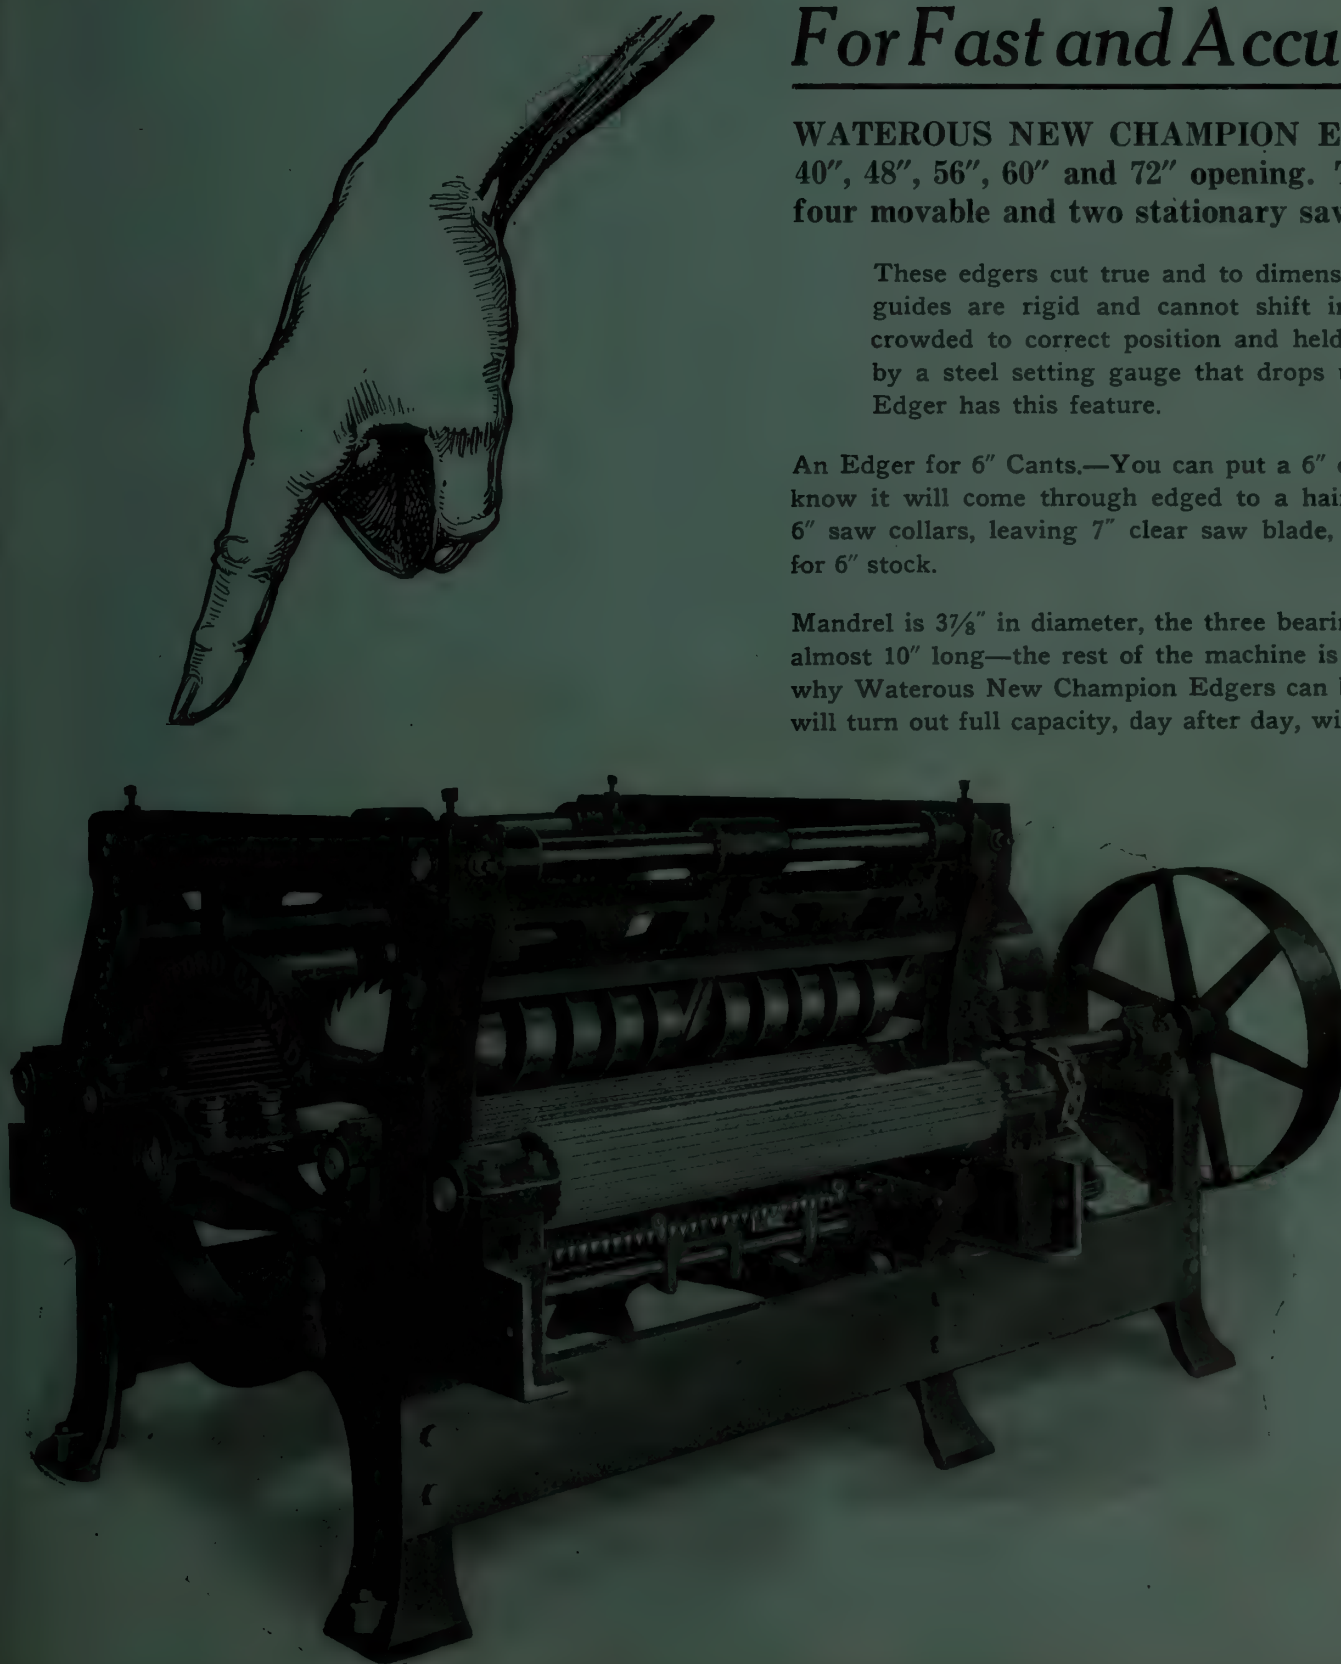

Mandrel is $3\frac{7}{8}$ " in diameter, the three bearings that support it are each almost 10" long—the rest of the machine is built in proportion. That's why Waterous New Champion Edgers can be crowded to the limit and will turn out full capacity, day after day, without falling down.

Notice the feed rolls, two before and two behind the saws. They are machine fluted to give a firm, secure grip on the timber that holds it fast, but will not mar it in any way.

The press rolls are divided, too, making both sides of the machine independent of each other. It's a worth while feature decidedly.

We manufacture up-to-date machinery for Saw Mills of any capacity, either circular or band.

There are 75 years experience behind every article turned out.

A MACHINE OF ESTABLISHED WORTH

The Corbet Automatic Towing Machine is not an experiment. It has been tested and proved efficient by actual work. Its service in the Navy, both on the Atlantic and Pacific has made it a machine of established worth.

SAFER THAN THE MANILLA LINE

The Corbet machine is made in five sizes to accommodate flexible steel hawsers from $\frac{1}{4}$ " up to 2" diameter. These steel hawsers are a vast improvement over the Manilla line, as their great strength prevents any chance of a break even in the roughest weather. They will last for at least ten years.

OUR LINE OF MARINE MACHINERY INCLUDES

Capstans, Cargo Winches, Ship Windlasses, Steering Engines, Hydraulic Freight Hoists. We also build special machinery to specifications.

Write for Catalogue.

The Corbet Foundry & Machine Co., Ltd.
OWEN SOUND, CANADA

H. L. Drullard, Esq., 80 Church Street, New York, N.Y.

Not altogether what we say, but what users say

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs, in calm weather, 30,000 in a head wind.

A Fast Feed
Matcher Head
scientifically
designed for
matching from
200 to 300 lin-
eal feet per
minute.

The SHIMER Fast Feed Expansion Matcher Head

With 12 High Speed Bits

The head is built heavy where the strain is and is devoid of all angles or openings, which lessen the wind resistance and cannot block with shavings.

These advantages, combined with the Shimer expansion feature, make a combination that is hard to equal.

The straight knives are long, assuring length of service, while the circular knives can be set back, and the straight knives jointed; in this manner the whole width of the straight knives can be jointed at the one setting.

The circular cutter is then brought to its proper location.

The Cheapest and Best Head on the Market.

Swedish Steel and Importing Co., Ltd., Shaughnessy Building, Montreal.

In Sizes from 5 to 500 B.H.P.

Shows Superiority Where the Strain is Most Severe

“Gripoly” proves its value on the heaviest drives. Most nearly proof against destructive agencies, it is the ideal belt for power transmission where efficiency must be maintained amid adverse conditions. It is impervious to temperature changes, water, acid, steam, oil, etc.

“Gripoly” is unequalled for use in the lumber mill and will give real insurance against the menace of costly breakdowns and losses in power and time. Let us show you further the merits of “Gripoly” Belting.

“Gripoly” is composed of 85 per cent. pure camel hair and 15 per cent. long staple cotton, solidly woven to yield a tremendous strength and to resist the severest strain.

Note how the edges are composed of triple twisted strands, absolutely indestructible, defying the friction of shifters, guide forks, or flange pulleys.

“Gripoly” is British made by Lewis & Taylor Ltd.

“GRIPOLY” is Stocked and Sold by

“CAM-FISH” CO., LIMITED

The Same Old Mistakes

Someone said that Lawyers would go out of business if men did not go on making the same old mistakes in the same old way.

If you have been making the mistake of ordering White Pine that was not well manufactured and properly graded, it's time for a change.

Our lumber is manufactured under the direction of our own men who see that it is right.

Try us on that next order.

Service That Counts

WE are bent on giving service—service that means something to our customers. For real service means satisfaction, and our customers must be satisfied.

Our Service Yard at Logansport, Indiana, is one mark of service. It enables us to deliver promptly. The following is some of the lumber that can be shipped from there immediately.

Ash		Plain Oak	
1 " FAS, No. 1 & 2 Com. . .	14,860	1 " FAS & No. 1 Com. . . .	34,545
1 1/4" FAS, No. 1 & 2 Com. . .	48,311	2 " FAS & No. 1 Com. . . .	58,320
2 " FAS & No. 1 Com. . . .	19,190	2 1/2" FAS & No. 1 Com. . . .	102,740
2 1/2" FAS & No. 1 Com. . . .	24,485	3 " FAS & No. 1 Com. . . .	83,600
3 " FAS & No. 1 Com. . . .	64,566	4 " FAS & No. 1 Com. . . .	58,900
4 " FAS & No. 1 Com. . . .	9,640		
Hickory		Poplar	
1 1/4" FAS No. 1 & 2 Com. . .	12,000	1 " FAS No. 1 & 2 Com. . .	48,200
1 1/2" FAS No. 1 & 2 Com. . .	33,000	2 " FAS No. 1 & 2 Com. . .	44,180
2 " FAS No. 1 & 2 Com. . .	12,000	2 1/2" FAS No. 1 & 2 Com. . .	18,110

Here We Are Again

MacLean Machine Works,
 Campbell's Bay, Que.

Dear Sirs:—

I am well satisfied with the feed-works I bought from you. I have used it for three seasons and I find it perfectly satisfactory. It runs my carriage steady at slow or fast feed.

I would not use any other.

Yours truly,
A. PROUDFOOT.

Mr. Proudfoot replaced a steam feed with one of our machines and states he saved enough wood in three months to pay for machine.

FULL PARTICULARS ON REQUEST.

The COUNTRY GENTLEMAN

Long-Bell Advertising is Read in Farm Homes in Every State

Seventeen farm papers in 1920 are carrying Long-Bell advertisements prepared especially for the farm trade. The copy and art work urges better farm improvements, more permanent buildings and modern conveniences both in dwellings, barns, implement sheds, granaries, etc. This is all part of The Long-Bell Lumber Company's aim to establish the widest possible recognition of this trade-mark as representing uniform high quality in lumber products.

CANADA LUMBERMAN

347 Adelaide Street West - TORONTO

Tudhope-Anderson

Detachable Lumber Trucks

Unequalled stand-up-ability on tough, rough and soft road-beds are the tests that explain the widespread popularity of these sturdy trucks among lumbermen. Cut shows Front Hauling Gear No. 41 coupled to Hind Gear No. 42. One or more Hind Gears may be attached or detached with ease.

Look at the wide tire steel wheels. They mean easy hauling. We guarantee them. Spokes may be renewed in case of accident—not so with others. Axles are high quality square steel ensuring many years' service. Wood parts are best oak, air-seasoned and kiln-dried. All parts well ironed and braced.

Built to the following specifications:—

No. of Truck	Size of Steel Axle	Tire Inches	Wheels Inches	Frame Length	Width
41 Front Gear	1 3/4" square	4 x 1/2	26
42 Hind Gear	1 3/4" square	4 x 1/2	42	5 feet	40 inches

For descriptive circulars write

Tudhope - Anderson Co., Limited
 Orillia, Ontario

No. 161 Self Feed Saw

A big fast feed capacity saw with adjustable feed rolls for feeding short stock. Mandrel is extended for gang ripping and has four bearings. This is a production machine of the highest type and which will prove a cost reducer in any type of wood-working plant.

Write for circular and price.

Saint Louis, U. S. A.

Home Office and Factory, 1913 to 1933 North Broadway

FIRE BRICK

We make several brands of fire brick made by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best adapted fire brick for your boilers, dutch ovens, refuse burners, kilns, etc.

We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse, which enables us to ship at once.

We manufacture the following well-known brands:

**"Elkco Special," "Elk Steel,"
"St. Marys," "Keystone" and "Rotex"**

Write for copy of our catalogue,

Pyrene Fire Extinguishers

Are the Ideal Fire Protectors for your mill, for the following reasons:—

- 1st—Pyrene is death to all inflammable fires.
- 2nd—Pyrene does not freeze at fifty degrees below zero.
- 3rd—Pyrene does not deteriorate.
- 4th—Pyrene is easily operated and ever ready.
- 5th—Pyrene reduces your Fire Insurance rate 15 per cent when installed on your Automobile or Motor Truck.
- 6th—Pyrene has served with the boys at the front.
- 7th—Pyrene in one of our Holsters is ideal for your watchman in case he locates a fire in your building.

We also carry the 2½ Gal. Soda Acid Extinguisher

Ask for our Catalogue which contains a full line of fire appliances, also for our book on how to protect your factory. This book contains valuable information.

Make Our Engineers Responsible for Your Belting Equipment

Put it up to them to place your transmission equipment on a 100 per cent. efficiency basis. Make recommendations that will create savings, which in turn will practically offset any expenditure they may suggest.

So certain are we that our belting experts can practically eliminate your transmission troubles, we are quite willing to analyze your plant at no cost to you.

It would be an expensive item in your overhead if you were to attempt such an analysis, but our experts will do that work for you just as they have for many of Canada's largest manufacturers who have placed the responsibility for their transmission equipment in our hands.

Practically every plant has one or more drives that are hard on belts. Just such drives as these are now equipped with

Dominion Friction Surface Belting

which for fifty years has justified every claim by satisfactory performance.

When you have belt trouble 'phone, wire or write our nearest service branch.

Our Dominion Hose, Packing and Industrial Rubber Goods are all the Same High Standard as Dominion Friction Surface Belting.

DISSTON-SAWS

THE BEST KNOWN SAW IN
THE WORLD

Each year finds a greater number of
leading mills using Disston Saws ex-
clusively. Mill operators know that
the success of their mill—the quality
and quantity of lumber they turn out
—depends on the saw they use.

It is natural, therefore, for them to
choose Disston Saws—the acknow-
ledged standard in quality for 80 years.

LION BRAND CORDAGE

for
DEPENDABILITY

Only rope made under exacting care, and with the highest grade materials can stand the stress and strain of the work imposed upon it when engaged in the Lumber industry.

Costly breakdowns due to inferior rope are unknown where Lion Brand is in use.

This, because Lion Brand Cordage is 100 per cent. efficient—the result of experience gained by over ninety years engaged in its manufacture.

Lion Brand can serve you as efficiently and economically as it is serving other lumbermen in camps and mills throughout Canada. Determine to have the best, and in doing so you will have the cheapest. Get in touch with us now. We will gladly send fullest particulars.

SIMONDS

Circular Saws

For the mill or woodworking shop saws that stand up to the work are a source of gratification to the filer or sawyer. It is safe to assume that the mill owner or operator will be the first to appreciate the economy of such saws. Less repairing and fewer delays mean the cutting of lumber costs if the saws cut the lumber as do Simonds. Our Inserted Tooth Rip and Cut-Off Saws are leaders in their field. They are economical because the teeth, which are renewable, stay in the plate and are strong and durable. Simonds Solid Circular Saws have long set the standard of Quality and Efficiency.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice, at Buffalo, N. Y., under the Act of Congress of March 3rd, 1879.

No 11

Challenge of the Lumber Industry

The restlessness of human nature is not alone seen in the ranks of industrial workers, but also manifests itself in many lines of business as well as professions. The doctor frequently wishes that he had become a lawyer, the lawyer that he had been a farmer, the farmer that he had been a manufacturer, the manufacturer that he had been a wholesaler, the wholesaler that he had been a speculator and the speculator that he had been a good executive. Thus the circle ever widens and it is because of this very uneasiness that things are kept on the move. If there is one business more than another that seems to have a specious appeal for the ordinary man, that lures him on and calls with a siren voice, it is the lumber vocation. It's open, free character and the fact that its votaries are dealing with one of the elements of nature, imparts to it a charm and attraction of which no other calling can boast.

There is something in man which makes him like to hunt and fish, to roam amid the great spaces and vast silences of the hills and dales and to worship nature with ardor and devotion. He who revels in such a career, is generally honest, open, generous and sincere. Many who love that kind of a life and others who have never had an opportunity to experience it, all feel that if they only had a chance, there is but one calling for them and that is the lumber line. It challenges the imagination and the conquering spirit of man. It bids him come out from the city and give battle to the forces that have withstood the elements since the dawn of creation. It is a vital, rugged health-imparting occupation and those, who, view it from the outside, imagine that wealth is speedily obtained in its pursuit. It is sad, indeed, to shatter such a delusion but the number of rich lumbermen is relatively not as large as that of those engaged in numerous other lines of business where the returns are more liberal without any of the speculative spirit, the play of for-

tune, the freaks of the weather and divers contingencies which weigh so much in its success of lumbering.

Just now, owing to the high price of lumber, some seem to be looking with a longing eye to enter the arena, believing that it is a short cut to independence and ease. It is another case of where the lords of creation see the primrose paths of others and imagine their own is a rocky road. It is a strange commentary on human nature that the only perfect job and the only perfect business is that belonging to the other fellow, never the one in which we are engaged. Those, who fondly think that the lumberman's life is one of comparative happiness—unmolested and remunerative—and give a second thought to the whole matter, will learn a fortune can be lost more quickly, perhaps, in the sawmill line than in any other. A drop of a few dollars in quotations may wipe out the earnings of a lifetime.

The man who contracts to give a certain figure for a cut, which will not be ready for shipment for months ahead, is taking grim chances with fate, especially during a period when values are fluctuating as they are today. Even suppose the present status of the industry remains undisturbed and that lumber prices become more or less stabilized, the manufacturer must take chances—scores of them. If he wins out, no one will begrudge him any measure of success his efforts attain. To those who take the risk, the largest spoils will always go. This is the reason why speculation always brings more generous returns than a bed rock investment. The fellow who takes a chance and never welches, is a true man, and the world has little use for the quitter.

The lumberman has to run the risk of too much or too little snow in winter and absence of rain in the spring, the scarcity of labor and its restless attitude, shipping tie-ups and embargoes, demand and supply abroad and at home, fire, flood, heavy loans and a score of other contingencies, all of which may change over night.

Yes, the lumberman's business is a free and open one! He, who is on the outside sees only the sheen and glare—not the cold, stern, irresistible conditions that have to be faced and the dangers and difficulties that arise on all sides.

Specious Argument to Gain an End

The depletion of American supplies of pulpwood, the scarcity of pulpwood in Canada for export (with a consequent shortage of paper), and the phenomenal advance of the Canadian pulp and paper industries are the main factors in the agitation in the United States for the removal of the embargoes on the export of pulpwood cut from Crown lands. It is admitted that the United States have been prodigal in the use of their pulpwood resources, and now that the supplies in the Eastern States are nearing the exhaustion point, there are loud complaints of provincial legislation which has been in force for many years.

The United States pulp and paper manufacturers, seeing their supplies of raw material on the wane, are making strenuous efforts to get Canadian pulpwood, and there are those who advocate what Senator Underwood calls the "big stick" of retaliation by cutting off supplies of wood and coal to Canada. The immense growth of Canada's industry has been, it is contended, at the expense of American production of paper, and it is sought to prove that the removal of the embargoes would not only benefit the United States, but would in reality help Canada. According to the U. S. advocates, the annual natural growth of pulpwood will take care of all the requirements of the Canadian and United States mills, even should the embargoes be removed, and there is no justification for the fear that the U. S. mills would attempt to strip our forests for the benefit of the United States.

The statement as to Canada's forest wealth certainly does not coincide with the assertions made over and over again by Canadian experts, who are emphatic that there is danger of our forests being exhausted unless we take means to conserve our resources, and that we are using up our forests without regard for the future.

The way in which Canada would "benefit" from the removal of

the embargoes is explained by the following clauses in a statement prepared by the International Paper Co. in support of Senator Underwood's resolution in favor of negotiating with Canada for the removal of the restrictions on Crown lands pulpwood:

"Provided Senator Underwood's measure succeeds, the woodland provinces of Canada would benefit tremendously by a prompt concession of the claims and requests that will be preferred by the commission appointed to negotiate with them. Not only would there be an active market in leases which would add wealth to the provincial treasuries, but the stumpage that would be cut under wise and modern lumbering regulations would add vast sums annually to the provincial receipts. Besides this, the improvement of the rivers, the building of camps, the constructing of taking-out and wood preparing plants, and the recruiting and employment of lumbering crews would yield so great a harvest to labor that the provinces would begin an era of unending prosperity. Moreover, the army of men that would be employed in the bush would provide at all times effective forces for fighting forest fires, which are a greater menace to standing forests than the axes of the lumbermen.

"The owners of the Canadian paper mills can have no ground for complaint if the commission provided by the Underwood Resolution succeeds in its labor, for they have already secured boundless limits of woodlands which provide not only for the indefinite supply of their mills at present capacity, but for as great an expansion as can be expected in the next generation. The Belgo-Canadian Pulp & Paper Company of Shawinigan Falls; J. R. Booth, Ottawa; the Brompton Pulp & Paper Company of East Angus, Quebec; the Doncona Paper Company on the Jacques Cartier River; the great Laurentide Company at Grand'Mere, Quebec; Price Brothers & Company, of Kenogami, at the head of the Saguenay; and the St. Maurice Paper Company at Three Rivers, hold, in the aggregate, 10,499,760 acres of limits secured years ago for bonus prices as low as \$1.10 a square mile, with an estimated stand of 52,498,000 cords of pulpwood. According to the basis of computation used by Premier Gouin, the annual growth of these forests, or the yearly interest on the forest capital will be 2,099,952 cords, or more than double the present capacity requirements of 995,000 cords a year in the aggregate of the mills of the companies."

Slow in Getting Down to Business

The province of Quebec has been lamentably slow in seriously tackling the housing question. Last year practically nothing was done, and this year there is little evidence of any substantial movement to get down to business. Several cities and towns, it is true, have applied for grants of the Federal loan, and in the case of Sherbrooke tenders have been let for a number of houses, a housing company having been formed for the purpose of administering the grant. In the case of Montreal, an application for three million dollars is to be made, and it looks as if the season will be well advanced before any decisive action towards erecting workmen's houses will be made.

The upsetting of the original plans of the Provincial Government has much to do with the slowness in putting the Workmen's Housing Act in force. The Government came to the conclusion that the intricate machinery set up was too complicated and was, therefore, abandoned, the operation of the Act being transferred from a technical commission to the various local authorities. This involved considerable delay, and also a lot of criticism. In view of the short building season, preparations for putting the Act in force should have been made during the winter, but the opportunity was neglected and in this way a lot of time was lost. Government departments are notoriously slow in moving, and the instances of the workmen's dwellings has been no exception.

In the meantime, industrial companies are taking steps to provide workmen's dwellings, and the cases of the Kipawa Company, a subsidiary of the Riordon Pulp & Paper Company; the St. Maurice Lumber Co., and the St. Maurice Paper Co., Three Rivers, and

others may be quoted as showing that the large industrial corporations are alive to the necessity of securing adequate housing accommodation for their employees.

Editorial Short Lengths

Calling attention to the heavy increase in pulpwood imported from Canada last year over the year 1918, Col. William B. Greeley, recently appointed Chief Forester of the United States, in a statement made public recently, warns the United States of the seriousness of its timber situation. He recommends that the system of conservation used in France be adopted in America. Under the French system, only small cuttings are permitted in each timber area during one year, or in a series of years.

* * *

Interesting data on Canada's ship and boat building industry in 1918 is contained in a preliminary report by the Dominion Bureau of Statistics, covering 90 shipbuilding and 114 boatbuilding establishments. The amount of capital invested was \$56,299,033 in the former branch and \$1,145,906 in the latter. The thirteen shipbuilding plants of Ontario were shown to represent capital invested to the amount of \$28,254,903; Quebec, nine plants, \$14,423,090; British Columbia and Manitoba, \$9,551,004; Nova Scotia and New Brunswick, \$4,069,376. In the boatbuilding industry the distribution shows Ontario with \$640,917, Quebec \$65,259, the Maritime Provinces \$291,381, and the Eastern Provinces \$148,349.

* * *

By the adoption of practical forestry methods, the United States in the next half century without depleting the standing timber supply could meet all domestic demands for lumber and could export from twenty to twenty-five billion feet annually, says an article in the May Commerce Monthly published by the National Bank of Commerce, New York. At present, according to the magazine, the timber supply of the world outside of the tropics is being used more rapidly than it is being renewed by growth. The forest lands of the world are estimated to amount to about 4,000,000,000 acres, or about 24 per cent. of the world's total land area. This estimate does not include the forest areas of China, Korea and the larger part of South America and Africa for which even fair approximations are not available. The United States, with about 545,000,000 acres under forest has 2,826 billion feet of merchantable timber, and its cut, which in 1918 amounted to 32 billion feet, is several times that of any other country.

* * *

Consumption of newsprint paper in the United States has increased 21 per cent. in the last five years, during which period domestic production of the commodity has shown a gain of only 5 per cent., according to a recent survey of the newsprint paper situation. Although the present acute newspaper shortage is partly due to greatly increased use of paper in newspaper advertising, this lack of a normal increase in production is one of the principal causes of the stringency.

In 1909, it is pointed out, the United States produced all the newsprint paper it used, but by 1919 it had become dependent on foreign sources for a third of its supply. Between 1899 and 1904 production increased 60 per cent.

"Canada's recent development as a newsprint producer has been much more marked than our own," states a writer. "While only one plant has been constructed in the United States since 1909, Canada has increased her pulp mills 57 per cent. in that time. Her production in 1917 was 689,847 short tons as compared with 1,359,012 tons in the United States. Canada uses between 10 and 15 per cent. of her own production and exports the rest almost entirely to the United States. Most of our foreign supply comes from Canada, but small amounts are also imported from Norway and Sweden."

Although imports of newsprint paper increased 98 per cent. in the last five years, American exports during the same period increased 81 per cent. Argentina led the countries of the world in purchasing newsprint from the United States. During 1919 the United States exported nearly a sixth as much newsprint as it imported.

Matter of Hard Business Sense—Not Sentiment

Safeguarding Canada's Wooded Wealth—Affects Everyone Who Wants to Buy or Build a House or Furnish a Home—Expansion of Great Industry

James White, Ottawa,
Assistant to Chairman, Commission of
Conservation

James White, assistant to the chairman of the Commission of Conservation, recently delivered a stirring and forceful address before the Rotary Club of Ottawa in which he set forth some timely facts regarding the destruction of Canada's forests by axe and flame.

What the commission had accomplished in its forest division, and what it is recommending in order that the many industries dependent upon the forests may continue to operate, were enlarged upon by Mr. White. There are few representatives of business interests whom the present scarcity of forest products did not touch either directly or indirectly.

The crux of the situation was in the fact that the publishing business in United States had

reached proportions that could not be supported by the forests of that country. The average circulation of the daily papers alone had been estimated at 27,000,000 copies.

Despite the growth in the demand, there had been only a comparatively small increase in the production of newsprint in United States since 1913. The Eastern States were faced with the fact that the exhaustion of their pulpwood supplies was in sight. Many of the American mills had no wood reserve and for 30 years American paper manufacturers had been turning to Canada for wood supplies. During the past decade, as the United States had become less and less able to sustain the expansion of its publishing business on its own resources, and had drawn on Canada more and more for its raw material. Canada had adopted the prudent and common sense policy of ensuring that she remain within her own borders the secondary as well as the primary industries of newsprint production.

The Rise of Great Industry

"Within this period, we have accordingly witnessed the phenomenal rise of the pulp and paper industry until it now constitutes one of the trump cards of Canadian industry," said Mr. White. "According to the latest figures, it represents a capital investment of over \$240,000,000 and gives employment in the manufacturing end alone to nearly 25,000 persons. Its value to the Dominion is further enhanced by the fact that it is contributing on an ever increasing scale to our export trade at a time when the problem of expanding our exports, particularly to United States, is a matter of supreme importance. During the fiscal year ending March 31, the total value of pulpwood, pulp and paper exported from Canada was nearly \$113,000,000, of which nearly 80 per cent. went to United States. This figure represents an increase of nearly double the value of the exports of three years previously. We are today manufacturing more than two-thirds of the newsprint used in the United States, and are supplying pulpwood and pulp for an additional 25 per cent.

"It is highly profitable and advantageous to Canadian industrial development that we should be able to supply the United States with such a large proportion of its newsprint requirements. I expect that the next ten years will see further expansion on a large scale of our pulp and paper industry, and it is, and should be, our aim to develop the utilization of our forest areas to the last notch consistent with their retention in a state of permanent productivity. To that end we must practise forest management of the most efficient character. We have had in the history of the eastern states a record of depletion and exhaustion of timber supplies. We have already attained a huge annual output of newsprint, but a New York publisher who has studied the situation very closely states that, if American newspapers were supplied with all the newsprint they could use, there would be a probable shortage this year of from 500,000 to 700,000 tons—or of from five-eighths to seven-eighths of the total Canadian output.

"A few weeks ago, a well known Canadian, addressing an important gathering of business men, took the ground that much of the effort that has been directed in recent years toward promoting the conservation of our forest resources was misguided and of very little practical value. He stated, in effect, that we should get rid of all the pulpwood that exists as quickly as possible, for this reason—that, if we do not, it will only perish and we of this generation might just as well get what we can out of it. The advice proffered by this gentleman was followed very shortly by a contribution along the same lines from a second gentleman. The latter likewise expressed no concern over the possibility of exhausting our supplies of pulp material because, he claimed, he was able to design a machine that could be adapted to reducing all classes of fibrous matter to pulp, and that, in consequence, ample raw material for the manufacture of pulp would be available from other sources when pulpwood, as we now have it, is exhausted. At about the same time as these two opinions were being widely discussed, the reading public was treated to a third and, this time, very different contribution on the subject. A prominent New York publisher, in an address to the Cleveland Advertising Club, said that if the growth in advertising which has taken place during the past two years were continued, in 10 years the United States and Canada would have depleted the forests of America.

How Commission Does Its Work

"The service that the Commission of Conservation has been endeavoring for over a decade to render to the community is that of studying the facts in regard to the extent and use of our natural resources, so that public opinion and action in regard to them may be founded upon conditions as they actually exist.

"The only proper way to conserve any resource is to develop it to the point of highest productivity and with the maximum of efficiency, and to use every means to maintain its productivity at that pitch. To withhold any natural resource from uses under proper conditions—whether it be a fishery, a water power, a timbered area or any other resource, is waste in the grossest form. The person who preaches any other policy under the guise or label of 'conservation' is misrepresenting and injuring the real policy for which that word stands. The sole purpose of the Conservation Commission is to seek to conserve our natural wealth against avoidable destruction—not against development.

"The crying need in Canada today, and for years to come, is to increase the use of our resources, and the efforts of the commission in the past have been directed primarily to that end rather than toward hampering or restricting sane exploitation.

"We are still far from possessing anything like satisfactory knowledge of our timber supplies, but we have made steady progress. The Conservation Commission has completed and published the results of its studies of British Columbia forest resources. We know, beyond any doubt, that the Pacific province has tremendous resources of timber, and that exploitation can be vastly increased without any fear of encroaching upon capital stock, providing that loss from fire and other destructive agencies can be checked. We have made similar studies in Saskatchewan, and the Dominion Forestry Branch is in a position to size up conditions in the prairie provinces as a whole.

Surveying Province of Ontario

"The commission has also published the results of a comprehensive study of Nova Scotia's forest resources. In Ontario, the Commission of Conservation is co-operating with the Provincial Government in conducting a survey.

"Mr. Piche, provincial forester, estimates that, in Québec, there is 360 million cords of all pulpwoods. Of this amount, there is 155 million cords of available spruce and balsam which, at the present rate of cutting, namely 3 million cords per year, would give about 52 years' supply. The annual growth has been estimated at 5 million cords, but it must be remembered that, as decay balances growth, there is no increment in the mature virgin forest. In addition, fire, insects and fungi are doing enormous damage and the tops and limbs left in the forest after lumbering greatly increases the injury from these causes, and only the practice of forestry will prevent

these agencies taking a greater toll than nature supplies by account of the increased cut that will result from the erection of new mills and the extension of existing plants.

"Similarly, it is estimated that there is, in Ontario, 250 million cords of spruce and balsam. Of this, it is estimated that there is 100 million cords really available at present and it is estimated that at an early date the cut will be one and a half million cords, which indicates 67 years' supply. The theoretical annual growth is nearly 3 million cords.

"New Brunswick, with 36 million cords of spruce and balsam, and an annual cut of one and a quarter million cords, has sufficient for only 29 years, and the theoretical increase due to growth is only 600,000 cords, or one-half the present cut.

Awful Fire Losses Each Year

"The losses from forest fires in Canada have been positively beyond computation. Fully one-half of the area in Canada, that is fit only for growing trees, has been run over by fire, and the majority of the trees killed or injured. Senator Edwards has stated that over twenty times as many trees have been killed by fires as have fallen before the lumbermen's axe. The commission's studies in British Columbia indicated that more trees bearing sawlogs have been destroyed in British Columbia by fire than can probably be found today in the whole of Canada. The worst feature of all, however, is that fires repeatedly sweep the same areas—areas that have been cut over or previously burned. This repeated forest fire is the vicious and destructive agent. It kills the young trees that are to make the future forest and the seed trees that might, if allowed to live, replace the destroyed young. One area examined by our foresters has been burned over seven times in 25 years.

"We have not been wholly idle in the matter of fire protection. One of the first acts of the Conservation Commission was to initiate legislation under which machinery was provided to deal with fires caused by railway agencies—a factor of enormous importance in the situation. Every administrative department in our Dominion and Provincial Governments, charged with the management of timbered areas, today is engaged in the campaign to prevent and control forest fires. Their efforts are being strongly supplemented

by those of independent commercial or educational organizations. During the last decade about \$10,000,000 has been spent in protection, but the fact remains that the safety of our forests is still too largely dependent upon weather conditions.

What About Cut Areas?

"The final phase of this subject that I wish to place before you relates to reproduction of commercial timber on areas that have already been cut over. What is to become of these areas when the present crop has been removed? We have it on the best of authority that 3,000 manufacturing plants in the southern states will discontinue operations within the next five to seven years owing to the depletion in the supply of southern pine. This wholesale closing of a basic industry is a serious prospect for any nation to contemplate. We are not making huge capital investments in pulp and paper mills with the idea that the usefulness of such plants will extend over a very limited period. Our timbered areas should be kept in a state of constant productivity and constitute a perpetual source of raw material.

"In regard to forest conservation, the organization of public support is facilitated by the fact that the question directly affects the pocketbook of practically every member of the community.

"It affects every man who wants to build, buy or rent a house—or furnish a home. The rising cost of lumber has been a decided factor in retarding the building of houses to relieve the housing shortage that has contributed so largely to the dissatisfaction and unrest that are current today. It affects every man who buys a newspaper or periodical, a book for his library or textbooks for his children at school. It touches the pocket of every merchant, manufacturer or other business man who buys advertising space. It affects every man who has a dollar invested in forest industries and our total capital investments in these enterprises approaches the stupendous sum of \$400,000,000. Finally, it affects every man employed in such industries of whom there are more than 80,000, with many additional thousands employed in woodworking establishments of one form or another that are directly dependent upon forest production.

"There isn't any question as to the motive behind forest conservation. It is a question purely of hard business sense—not of sentiment," he declared in closing.

What Lumbermen Are Up Against in South

How Stocks of Gum and Oak are Sadly Depleted by Bad Climatic Conditions, Car Shortage and Scarcity of Help in Logging -- The Outlook

In the history of the furniture industry there has possibly never been the same degree of difficulty of production and demand for the product as is now being experienced by the manufacturer. But while he is putting forth every effort to produce more goods to fill a great and increasing need for his line, he is being harassed almost constantly by the multiplying demands of labor and the perplexing problems of obtaining an adequate supply of materials to carry on his business. The matter of finding a sufficient quantity of lumber to keep the factory going is a problem now faced by some of the furniture manufacturers, says Harold E. Everley in a recent report of an exhaustive investigation conducted by him for the National Furniture Manufacturers' Association of America.

At the close of hostilities, the lumber industry emerged from its war time activities with less than 70 per cent. of the normal supply of lumber on hand for peace time consumption, and, because of the great uncertainty at that period as to whether or not business in the wood using industries would resume with pre-war activity and the great difficulty of re-organizing the industry, which was in a demoralized condition, production of lumber was not immediately speeded up.

But contrary to the general opinion of business men, business did not resume and the tremendous pent-up demand for every conceivable article made of wood was let loose upon the market. The result was the consumers of lumber entered the market and very quickly absorbed most of the available hardwood lumber before the mills of the country had time to build up their stocks to pre-war conditions. Along with the heavy domestic demand came that from foreign sources, which, in oak alone, had increased from 63,633,000 feet in 1918 to 147,665,000 feet for 11 months of 1919. During the same time the export of gum increased from 27,733,000 feet to 67,209,000 feet. The insistent demand for lumber depleted the already low stocks which, in the Southern district, could not be replenished

due to the unusually bad climatic conditions that have been retarding operations over a greater portion of the hardwood territory of the South.

The lumber mills located in the low lands of Southeastern Missouri, part of Tennessee and Arkansas, Louisiana, Alabama, Texas and Mississippi produce approximately 80 per cent. of the total gum manufactured and nearly 30 per cent. of all the oak cut in the country. Conditions as they may exist here offer a key to the present situation surrounding the manufacture and supply of available gum and oak lumber and hence influence the market. The three states—Arkansas, Mississippi and Louisiana—together produce approximately 68 per cent. of the total gum cut, hence any disturbance in the hardwood production of these districts greatly affects the supply of gum lumber.

There are reasons why the Southern producers were unable to increase their low stocks of lumber. Undoubtedly the most important of these is the effect of the unfavorable weather conditions which have prevailed over most of the South since the fall of 1918. On the low lands the woods were in very bad logging condition when the worst rains came in October 1919, and have continued almost incessantly since that date, making the forests impassable and lumber operations over a very large part of the low, flat territory were discontinued.

What the Incessant Rains Did

The rains caused a flood of the forests of that part of the country which produce, at least, 70 per cent. of the total cut of gum and 30 per cent. of the oak. Logs were covered up with mud and water, railroad tracks and spurs became impassable owing to the soft ground under them. In many places they sank out of sight into the mire, and muck, which were soon formed by the weight of the logging equipment passing over them. It was a physical impossibility to continue work under existing conditions on the flat lands. Opera-

tions ceased to an extent that, at present, there are but few mills in the low sections of the Southern district in operation.

Together with the unfavorable climatic conditions came the difficulty of obtaining plenty of hands to get out the logs. It is said that more than 150,000 colored laborers left the South during the war. Those remaining were, in many cases, an inexperienced class which has not improved very much. It is claimed on good authority that the present class of labor, which is largely colored in the South-

Showing result of excessive rains in southern district

ern hardwood territory, is only 75 per cent. as efficient as that to be had previous to the war. Great numbers of men, who formerly worked in the lumber industry, did not return at the close of the war, which left the mills without sufficient amount of trained help at the time when production of lumber was needed to be greatly increased.

Car Shortage is Serious Problem

Another very serious evil of the present time, which is retarding the production of lumber throughout the South and causing great difficulty in getting available stocks to the market, is the present shortage of cars. This condition is not a temporary one, and the lumber industry is face to face with what is unquestionably going to be a serious problem. It is the opinion of well-known transportation men and railroad officials that there will be no relief from the present situation during the year. The car shortage is due to the lack of available equipment which does not exist. Cars cannot be had owing to the fact that there is neither material, labor, nor money available to build them. In this period of unusual industrial and commercial activity, the scarcity of cars is severely felt, and, as there are virtually no new cars being built, the shortage will gradually increase until such time as car construction is again under way.

The present number of obtainable cars in the Southern territory for shipping logs and lumber is only 60 to 65 per cent. of normal requirements, which means that unless relief is speedily to be obtained the shortage of lumber available for the manufacture of furniture and other products made of wood will continue to be one of the perplexing problems.

The present shortage of logs in the Southern Hardwood Territory, especially in the low, flat districts, is extremely serious. Ordinarily, the saw mills of the South collect large stocks of logs during the fall months in order that they may operate their mills during the winter, when it usually rains and keeps the logging crews out of the woods. However, the fall of 1919 was unusually wet, making it impossible to build up reserve log stocks for the winter and the larger proportion of the mills of the territory investigated had to enter the heavy sawing season without sufficient number of logs to keep them running.

Log Stocks Are Unusually Low

The inability of the lumbermen to cut trees and get them to the mills has arrived at a critical condition and the difficulty of accumulating logs has reached a point where log stocks on hand now are only 30 per cent. of what they usually are in normal years. The prospects for the resuming of logging soon on the low, flat lands which include much of the gum producing territory, is not very encouraging because of the continued unfavorable logging conditions. With the best of weather it will not be before May that logging operations can begin in any proportions over the greater part of the Gum and Oak producing territory of the South.

Lumber mills cannot operate without logs. The difficulty of obtaining a sufficient supply to keep many of them in operation at

full capacity in some sections of the South has prevented the manufacture of lumber on a normal basis for several weeks.

According to the latest reports and the writer's observations, the production of lumber in the three adjoining districts, Memphis, Arkansas, and South Wester—producing largely gum and oak, is at present operating at 45 to 50 per cent. of the cut obtained at this time during a normal year.

In some sections of the South it is hoped that an increased output will follow the advent of favorable weather conditions and this will tend to help produce an easier market situation. However, it must be remembered in this connection that a heavier production will no doubt be accompanied by a corresponding expansion of demand for lumber that cannot be much longer deferred.

The rapidly waning supply of logs on hand at the mills together with the present logging difficulties over a large portion of the Southern Territory is being reflected in the present condition of the unsold lumber stocks, both green and dry, which now total approximately 27 per cent. of what they should be at this in normal years.

The Depleted Stocks of Oak and Gum

The following are reliable statistics of the stocks of gum and oak lumber on hand at the mills in the Southern Territory.

On January 1, 1920, the total stocks of gum lumber, both green and dry, on hand at the mills in the entire gum producing territory were 175,671,000 feet, of which 113,887,000 feet were unsold. On February 1 the total gum lumber stocks, both green and dry, on hand at the mills were 170,446,000 feet with 108,093,000 feet unsold, showing a decline in available stocks of gum lumber on hand unsold, green and dry, of 5,794,000 feet during the period between January 1 and February 1, 1920.

In studying the statistics of oak stocks on hand in the Southern Territory, it is found that on January 1, 1920, there were on hand at the mills, both green and dry, 323,223,000 feet of oak lumber, of which 240,144,000 feet were unsold. On February 1 the total number of feet of green and dry oak lumber on hand at the mills was 306,864,000 with 215,919,000 feet unsold, or a reduction of 24,225,000 feet, both green and dry, on hand unsold. However, this condition is not so serious as it may seem for the Eastern oak producing territory reported, for February, a gain of 8,478,000 feet of oak stock on hand at the mills over the amount given for that section of the country for January 1, thus making the total decrease of oak stocks at the mills, both green and dry, for the country as a whole, but 15,747,000 feet less than those on hand January 1, 1920.

When logging again resumes on a large scale, the mills will immediately increase their production and the present low condition of lumber stocks will take on a more favorable aspect.

Difficulties in Getting Plywood

Veneers and plywood, like lumber, are products of the log and any disturbance which reduces the cut and supply of logs will necessarily affect the output of these materials. With the production of logs and flitches for veneer and plywood manufacturing at but approximately 25 per cent. of what it should be in normal times and with the production of veneers and plywood now not more than

Showing efforts that are being made to maintain production

40 to 45 per cent. of the normal cut, it is only natural that users of these products find them difficult to obtain.

With the present decreased production has come an increased demand. For five years building operations have been restricted and there has been comparatively little call for veneers for interior finish. With the increase of building there is a growing need for veneer. Another demand for veneer is coming from the battery manufacturers who are increasing the production of their line ra-

pidly. The need for thin stock on the part of the battery manufacturers is beginning to affect the supply of veneers for other purposes. One mill reports that it is expecting to give one-third of its production to the battery people, one-third to the need of the building operations, and the remainder to the furniture industry.

Some idea of the present shortage of veneer and plywood stocks may be had when it can be stated that at present the orders for sawn oak veneers are 100 per cent. more than the stock on hand, and this condition has been true since January, 1920. On February 1, 1920, there were orders for 17,000,000 feet of sawn oak veneers with but 8,400,000 feet on hand. These figures represent the production and stock of about 90 per cent. of the total number of firms manufacturing veneer and plywood stock.

The conditions as to the production and stock of sliced veneers is about the same as for sawn material. On February 1, 1920, there were on the books orders for 19,925,000 feet with but 800,000 feet in stock, as compared with 1,800,000 feet of orders and 728,000 feet of stock on hand January 1, 1920. It has been stated that slicer machinery manufacturers are now twelve months behind in filling their orders for equipment to make sliced veneers. When this equipment can be manufactured and placed to work it will tend to increase the production of this particular product.

The rotary veneer mills report being three months behind in filling the orders for rotary cut veneer.

Efforts to Increase Available Supply

The shortage of stocks and difficulty of manufacturing veneers and plywoods, insofar as the producers of the South are concerned, is due, in the main to the scarcity and high price of suitable veneer logs and flitches. The present condition of the veneer and plywood market will gradually improve as soon as the logs and flitches can again be had by the manufacturers in large and increasing quantities which will permit them to gradually build up their stocks of the finished product.

In general, it may be said there has not been, nor is there at present, insofar as is apparent, any effort to voluntarily limit or otherwise influence production, thereby increasing the shortage of lumber for the purpose of inflating prices. On the contrary, great efforts have been and are now being put forth to increase the supply of available lumber because of the insistent demand and the attractive prices.

Just what the immediate future prospects will be for a relief from the present lumber shortage conditions found in the southern territory, no one can accurately tell. The possibility of increasing production depends mainly upon future weather conditions throughout the South. Usually the spring weather in that part of the country is favorable for increased log hauling and lumber cutting. If this be true this spring, another month or two will find the timber and logging crews again busy making preparations to begin heavy operations on all but the flatest lands. For the present, it may be considered that the lowest ebb of lumber production possibly has been reached in that territory covered by the investigation up to date. There will be but few mills, now in operation, cease producing lumber because of the lack of logs.

How Walnut Production Dropped

American walnut (black walnut, as it is often called) is found from Massachusetts and South Ontario west through the southern half of the Lake States to Middle Nebraska and Kansas and to Central Texas and Northern Florida. Statistics of recent dates now show the greatest production of walnut to come from the States of Missouri, Kentucky, Indiana, Ohio and Tennessee, which, together, produce almost 70 per cent. of the total cut. About 25 per cent. of the entire production for 1917 was obtained in the State of Missouri alone.

Walnut was cut out far in advance of other timber, but up to 1850 it was fairly abundant. From 1875 to 1900 walnut production has dropped slowly from 125,000,000 a year to about 50,000,000 feet where it seemed to remain until the great demand for walnut came during the recent war. Production was again brought back to almost 100,000,000 feet during 1918.

Despite the urgent call for black walnut lumber, made largely by the rifle manufacturers, the production in 1917 was only 53,676,000 feet or 12 per cent. below that of the year previous. Veneer producers were active in the market and many of the best logs went to these plants instead of to the saw mills.

Just what the cut will be for 1920 cannot be accurately told, but a conservative estimate would be between 40 and 50 million feet. The production of walnut veneers for 1920 is estimated to reach 100,000,000 feet with a possible increase, if necessary.

Considering that the present stand of walnut timber in the United States at present is approximately one billion feet (government estimates) and that the annual cut based on the 1920 production, which is estimated to reach fifty million feet, the present stand of

walnut timber will last for fifteen to twenty years. During that period there will be thousands of trees which will become merchantable each year, thus adding to the total supply.

Export of Walnut Has Ceased

The domestic consumption of walnut between the years of 1850 and 1875 was heavy. From the latter date up to 1900 the home consumption had decreased materially. The demand of foreign markets has since very largely taken its place and has continued to grow until just preceding the war when, it is estimated, that, at least, 85 to 90 per cent. of the walnut lumber and logs cut in this country was exported. England and Germany were the principal customers.

If it be kept in mind that in past years more than three-fourths of all the walnut lumber produced in this country, which annually amounted on an average to fifty million feet, were exported without apparently affecting the supply of the furniture industry, it does not appear that there need be a shortage of this lumber for the present. On the contrary, now that very little of this wood is being exported, there should be plenty of walnut available. An inspection of some mills seems to prove this supposition for they have several million feet of walnut in logs and lumber in stock.

Every indication is that there should be no difficulty in obtaining a sufficient amount of good walnut lumber to care for the present and immediate future needs of the furniture industry.

The lumbering conditions around Asheville, North Carolina, and eastern part of Tennessee are more encouraging. The production of lumber in this part of the country is now about 75 to 80 per cent. of that in normal times. Up to recently the shortage of labor affected lumber production considerably. With the coming of warm weather there seems to be more help available and the present indications in this territory are that there will soon be more lumber produced than during the winter months.

However, mill owners are putting forth every effort to increase production and there are hundreds of small mills springing up, which will tend to increase the available supply of lumber. The general outlook for improvement in the hardwood territory outside of the lowlands is very optimistic.

A Live Wire in Lumber Line

G. Herbert King, M.P.P.,
Chipman, N.B.

G. Herbert King, M.P.P., of Queens County, N. B., who was recently elected a member of the Executive of the New Brunswick Lumbermen's Association, has been engaged in the lumber business all his life. Mr. King is a son of Hon. G. G. King, who represented Queens County in the House of Commons, Ottawa, for many years, and has been a Senator for nearly a quarter of a century. On his mother's side the members are of the United Empire Loyalists extraction, being descended from the Briggs family.

The subject of this reference was born in 1870 and has always led an active busy life. The King Lumber Co., Limited, of Chipman, who are manufacturers of pine, spruce and hardwood lumber, lath, shingles and sheathing,

was formed in 1897, having bought the firm of G. G. King and W. C. King. Since that time G. Herbert King has been acting in the capacity of manager. The King Lumber Co. cut on an average from 5,000,000 ft. to 7,000,000 ft. annually. Practically all of their cut has been contracted for during the coming season, the only difficulty being to get cars and lighters in which to make shipments. The King Lumber Co. also run a general store in connection with their milling operations. For the last fifteen years Mr. King has been conducting a mining business in Minto, about seventeen miles from Chipman, which venture is entirely independent of the King Lumber Co.

Mr. King has always believed in devoting a certain amount of his time and talent to the welfare and progress of the community in which he resides and does business. He served two terms in the Municipal Council for Queens County and ran two elections as a local member. The first time he was defeated, but in 1917 in the general provincial contest he was successful. A Liberal in politics he has always taken great interest in the prosperity of the lumber industry and the success of its organizations.

Western Lumbermen Expect Active Business

Trade With the Middle West States is Predicted to be on the Up-curve—Car Situation Has Greatly Improved and Prairie Demand is Increasing.

It seems rather an unprecedented situation in British Columbia lumber selling that the export trade is extremely active and that the car trade both to Canadian and U. S. points is at a very low ebb for the moment. In fact shippers say that there never have been so many cars of lumber in transit or at transfer points looking for a home than for the past few weeks. One shipper stated that Minnesota Transfer was overcrowded with lumber cars. Another said that Winnipeg and Cartier, the latter the diversion point for eastern Canadian orders, had an unprecedented number of cars awaiting move orders. The costs for unloading, storage and demurrage have run up very heavily on many shipments, and in other cases owners of cars in transit have sacrificed in order to avoid further charges. Some indeed have held till quite a bill of costs accumulated and then sold. Needless to say there are buyers on the lookout for bargains, and they have taken advantage of the situation. However that is not the reason for the general experience of cars failing to find a buyer before reaching transfer points. Over-confidence in the lively U. S. market for the past six months, and anticipation of much earlier spring opening of trade in lumber with the eastern provinces, contributed to the somewhat free speculative shipments. One dealer remarked that when business was lively there was something very handy about having a car in transit which could be diverted if a rush order came in while it was rolling. On the other hand, when business was falling off such transit cars gave more trouble than they did profit. There has been such a general adoption of the practice, this spring, amounting to a gamble on the order market, that few escape the charge of being offenders. Most of the lumbermen are now convinced that a car in the yard is worth two in transit.

Cargo orders, to a total of almost nineteen million feet B. M., have been placed during April, with B. C. export saw mills, through the Associated Timber Exporters of B. C., Ltd. This organization includes practically all mills which seek an export cargo trade, or are equipped to accept orders for it. Beginning the month of May with orders for 13,000,000 feet of railway sleepers and cross timbers for shipment to U. K. over the period from June to December, the export mills have as much business in sight for the moment as they can handle along with other orders that are coming right along. The railway timber orders are very acceptable as the sizes are very convenient to handle both in the mill and in stowing aboard ship. More than that it works in well with general mill cut to turn a portion of the logs into ties. It does not interfere with keeping up a proper proportion of sorts in other cuts. The cargo space to take care of these large shipments is expected to cause no difficulty, as there is plenty of tonnage available now. The situation in regard to water-borne traffic, is better than it has been for some years. In fact conditions are fast getting back to normal. Of this large export order, the Vancouver Island mills have taken 5,000,000 feet, the mainland coast mills taking the remainder. Practically all the mills in the Associated Timber Exporters are participating in the order, in accordance with capacity or with the amount of business previously booked. With deliveries spread over six months no difficulty in getting the order out is anticipated.

Col. Bruce Powley, head of the Dominion and Provincial Employment Service in Vancouver, is authority for the statement that there is a general shortage in the lumber industry of trained men.

This is applicable to the skilled positions both in the woods and in the mill. There is a big difference in logging the monster timber of B. C. from that of eastern Canada. Men skilled in handling the small timber of the eastern woods have to learn the business all over again when they come here. With the heavy machinery used for handling logs in the woods here, fewer men are required, but they are of a higher class of skilled labor than elsewhere. A factor that is making itself felt on the coast is that the former conditions, where there was a certain amount of labor exchange going on all the time between B. C., Washington and Oregon, where similar conditions of work prevail, are at an end. Immigration authorities on both sides of the line have tightened up the alien labor restrictions, from a variety of causes, some of them arising out of the war. The true logger is a nomad, and to many of them it was all one whether they were working north or south of the international boundary line. As a matter of fact they "drifted" periodically, and, aside from that tendency, they were always ready to go somewhere else and see something new. But the stringent immigra-

tion regulations have changed all that. Hence B. C. must train her own heavy timber "fellers." Or go without.

In the Mountain section of B. C., the eastern part of the province, the labor available in winter is almost entirely a seasonal supply, composed in large part of farming help from Alberta and even Saskatchewan, who go to the woods for the winter, but return to the farm with the opening of spring work. Hence at this season the Mountain mills and camps are always facing a shortage of help. Col. Powley says no man in the upper country need go without a job, and any man in the province who is willing to go there will find work in mill or woods. Conditions in camps have greatly improved in the past few years, and wages everywhere are on a higher level than ever before. In the coast district there was at one time some feeling that the O. B. U. which has a considerable influence among the logging workmen, would cause a strike, but nothing further eventuated.

Prices of lumber have again shown a downward tendency, but there is no official issue of any new price list. It has rather been individual action, shading of the prevailing high prices to close some business offering. There is the utmost confidence that the delay in opening of trade with prairie lumber buyers has only been caused by the extremely backward spring, and that it cannot be much longer till business will be moving very swiftly. The car situation, both for prairie and U. S. shipments has become far better than for some time past. Trade with the middle west States is predicted to be on the up-curve and will be good, so authorities south of the line say, within thirty days.

Uniform Order Blanks Across Border

The National Retail Lumber Dealers' Association says, in regard to the adoption of standard order blanks, that it has never made any such move nor has it adopted such forms for the use of its members. Some State Associations are using universal order forms but this is entirely outside of the national organization.

Chas. A. Bowen, secretary of the N.R.L.D.A., Detroit, in a letter to the "Canada Lumberman" says that they have not felt that this was an important matter at all because the class of dealers "with whom we are doing business and who are members of this Association, as you know, are the ones in the larger cities, all of whom have their own order forms and the manner of placing business. It is not like a group of dealers such as are in the State Association, many of whom are in small towns and who have no regular way of placing their orders or transacting their business."

Mr. Bowen believes that an order form for the latter class of dealer would be a valuable thing. Those States, whose Associations have adopted this order form, find that they have been largely used and are of great benefit to the small dealer. The large dealer, however, does not care to employ such documents as some are not particularly favorable to him. Mr. Bowen continuing says, that the suggested form might be of some benefit in order to get more or less of a uniformity. "This is as far as we could attempt to go—even that has not up to this time seemed necessary to our members," he declares.

Recently a meeting was held in Columbus, Ohio. It was called by some of the retailers and a conference between wholesalers and retailers took place. The order blank came up for considerable criticism on the part of the wholesalers. An effort was made at the time to have the retailers make more or less of a change. While this alteration may not be made, many dealers themselves were in favor of the change as well as were the wholesalers. A large number took the stand that the matter should be left exactly as it is.

The order blank, which was criticized, is the official one of the State Lumber Associations of New York, Michigan, Pennsylvania, Ohio and Indiana. This form was published recently in the "Canada Lumberman" and was also distributed at the annual meeting of the Ontario Retail Lumber Dealers' Association at the February session in Hamilton.

Mr. Bowen says there is not a united opinion on these matters in the matter of uniform order blanks from among the dealers themselves who are apparently supposed to be using the blanks.

The shortest distance between buyer and seller is advertising.

Wholesalers Oppose Railway Tariff Changes

Regarding Weighing of Cars, Elimination of Allowances and Alteration of Estimated Weights—New Federal Tax Proposals Discussed at Monthly Session

The monthly meeting of the Wholesale Lumber Dealers' Association, Incorporated, was held at the Albany Club, Toronto, on Friday, May 21st. There was quite a good attendance, and a number of matters of exceptional importance to the members were taken up.

Mr. A. C. Manbert occupied the chair and the first item of business was a report by Mr. Don Barclay regarding the summer picnic of the association which it is proposed to hold at Grimsby Park. Mr. Barclay, representing the Entertainment Committee, asked for an expression of opinion regarding some of the details of the event, and was finally advised that the most suitable time would, probably, be about the second or third week in July. It was also decided that the members should bring their wives and families. Other details of the programme will be arranged by the Entertainment Committee, who will have a report to present at the June meeting of the association.

Protest Against Car Weighing Regulation

Mr. A. E. Eckardt submitted for the consideration of the meeting a new tariff issued by the Canadian Freight Association, known as Tariff No. 14, effective May 25th, involving a number of very radical departures in connection with weighing of cars, elimination of allowances, alteration of estimated weights, etc. There was a lengthy discussion of the subject and finally the chairman appointed a committee consisting of Messrs. A. E. Eckardt, D. C. Johnston and A. E. Gordon, to prepare a resolution on the subject to be forwarded by night lettergram to the Board of Railway Commissioners for Canada, at Ottawa. The committee withdrew and finally returned with a resolution stating that the association protested strongly against the provisions of the new tariff in regard to weighing of cars and asking either that the new tariff be suspended, or that the association be granted a hearing on the subject. This wire was sent to the Board and a reply was received on Monday morning (subsequent to the meeting) in the following words:—"Your wire received Canadian Freight Association tariff No. 14 re weighing carload traffic. Board rules that a prima facie case for suspension not established and matter will be set down for hearing at Ottawa June 1st." The hearing will take place in the Central Station Building, Ottawa, on Tuesday, June 1st, at 10 a.m.

Mr. Eckardt reported that the Canadian Manufacturers' Association were prepared to co-operate with the Wholesale Lumber Dealers' Association in pressing this case.

Mr. J. A. McBean introduced a discussion regarding the requirement of United States railroads that freight charges on shipments to Canadian points should be prepared, in United States funds. During the discussion of this subject it was learned that the Interstate Commerce Commission had just issued an order instructing the Railway Companies that they should not require prepayment on shipments to Canadian points in United States funds, in cases where it had not been previously accustomed to do so.

Big National Gathering Reported On

Mr. H. Boulton, secretary of the association, presented a report upon the annual meeting of the National Wholesale Lumber Dealers' Association, held in Washington, D. C., on March 24th and 25th, stating that there had been a good attendance of Canadians at the meeting and that they had been splendidly received and entertained. The convention itself had been most successful, members being present from nearly all parts of the United States, who entered seriously into the discussion of all the important problems then before the trade.

The secretary's report was followed by a discussion upon the credit situation, introduced by the chairman, Mr. Manbert, who used as a text, some of the statements made at the convention of the National Wholesalers, as reported by the secretary.

Mr. A. E. Eckardt suggested that at one of the future meetings of the association it would be interesting to have an address presented by some authority upon the Metric system. The chairman considered that this would be of interest and value to the members and suggested that Mr. Eckardt should make the necessary arrangements.

The meeting then settled down to a discussion of the new taxes introduced by the Minister of Finance. Considerable difference of

opinion developed regarding the working out of the taxes and the interpretation of their details. Some members reported that they had already commenced entering upon their invoices a separate statement of the amount of the tax. Others reported that they had as yet done nothing.

Uncertainty prevailed among the members in regard to several features, such as the tax upon lumber bought upon a proforma invoice; whether there would be a tax upon lumber sold by one wholesaler or manufacturer to another, in case the purchaser intended to export it to the United States or elsewhere.

It developed during the discussion that several members had already written to the department at Ottawa, asking for interpretations of points in regard to which they were in doubt, and in connection with which they were expecting replies at an early date.

It was decided that the association should not take any steps in connection with the matter but should wait until the members had received replies to their individual enquiries. These replies will be forwarded to the secretary who will promptly send the information out to all members of the association by circular.

The next meeting of the association will be held on June 11th, instead of June 18th. The latter date is one of the days of the convention of the National Hardwood Lumber Association at Chicago, and several members of the Wholesale Lumber Dealers' Association will be at Chicago for that meeting.

Big Hardwood Gathering in Chicago

The Twenty-third Annual Convention of the National Hardwood Lumber Association will be held at the Congress Hotel in Chicago, Ill., on June 17th and 18th. Chas. A. Goodman, of Marinette, Wis., is the president of the association, Horace F. Taylor, of Buffalo, N. Y., one of the vice-presidents, and Frank F. Fish, of Chicago, secretary-treasurer. The attendance this year promises to be very large and all delegates are advised to make their reservations at once.

Among the features of the convention will be an address by Earle Palmer, National Councillor on the Chamber of Commerce of the United States, and the report of the Inspection Rules Committee by John W. McClure, chairman. This report along with the proposed inspection rule additions is expected to arouse much interest and not a little discussion. Other subjects, which will be talked over generally, will be: "The Demand for Hardwoods," "Condition of Stocks," "collections," "Labor Supply," "Operating conditions," "Prospects of Production," etc.

On the second day of the convention the election of officers and three vice-presidents to serve one year, will take place and also the election of eight directors to serve three years, as well as the election of a director to serve two years, the unexpired term of the late T. M. Brown.

On the evening of Thursday, June 17th, a complimentary banquet will be tendered by the National Hardwood Lumber Association to the members and invited guests, and on Friday evening there will be a supper and smoker.

The sessions of the convention will be held in the Gold Room on the Mezzanine Floor of the Congress Hotel. It is announced that, owing to the amount of important business which the convention has to deal with this year and the large attendance expected, no provision has been made for the entertainment of ladies.

Against the Demon Forest Fire

The St. Maurice Forest Protective Association, Limited, of Three Rivers, Que., is doing some very effective advertising in the press of Quebec so far as educating the public is concerned in the matter of fire protection. Recently an announcement headed "Who Am I," was inserted and among the startling statements made was "I steal in Canada alone over \$100,000,000 each year." The "I" is designated as carelessness, and it is pointed out that this particular "I" has no better exponent than the demon forest fire. The advertisement concludes with the plea "Join the Battle Against carelessness by Helping us to Prevent the Destruction by Forest Fires."

Retail Lumbermen Hold Profitable Session

Branch No. 7, O.R.L.D.A. in Annual Assembly at Stratford Re-elect Their Former Officers—Season's Outlook is Promising and Trade Satisfactory

Enthusiastic and well attended was the annual meeting of the Stratford branch of the Ontario Retail Lumber Dealers' Association, known as Branch No. 7, which was held at the Mansion House, Stratford, on May 21st. Many live topics were discussed and the interchange of views and expressions of opinion on present trade conditions and outlook for the summer months proved both timely and profitable.

Since organized a little over a year ago, the Stratford branch has made splendid progress, its membership is growing and the dealers are all pleased with the results that have been brought about through association and organization. Robert Oliver, Listowel, chairman, presided and extended a hearty welcome to all the members, making particular reference to the kindness of J. B. Mackenzie, of Georgetown, secretary of the Orangeville district, in attending. He said that Mr. Mackenzie was a live wire in the retail ranks and they were fortunate in having him present to tell what his (Mr. Mackenzie's) district was doing and what action had been taken on a number of problems that arose from time to time.

E. K. Kalbfleisch, of Stratford, secretary-treasurer of the branch, read the report of previous meeting, showing that there was a substantial balance on the right side of the ledger. The membership fee for the coming year was fixed at \$2.00 and it was decided that the next gathering should be held in the Classic City at the call of the chairman. All the old officers were re-elected, although the majority of them desired to vacate their positions in favor of new blood. The members present would not listen to this suggestion and unanimously voted that the present chairman, vice-chairman, secretary and members of the executive should hold the reins for another year.

The officers of the Stratford district for 1920 are as follows:—
Chairman, Robert Oliver, Listowel.
Vice-chairman, J. Boshart, Milverton.
Secretary-treasurer, E. K. Kalbfleisch, Stratford.
Executive Committee, G. S. Zimmerman, Tavistock; P. Ament, Brussels; E. Fleischauer, Stratford; J. J. Cluff, Seaforth; D. C. Baird, St. Marys.

Good Effect of Local Sessions

After the routine business was attended to, J. B. Mackenzie was called upon and expressed his gratification at being present. The social side and educational value of such meetings was emphasized and Mr. Mackenzie added that he thought much greater good would result from local associations if the members met more frequently. He felt that lumber dealers should be like the farmers in the days gone by, viz., sit on the fence and have a good friendly chat. He referred to the business assessment of a retail lumber dealer which was, he said, far too high when compared with other business-

es. The matter had been brought to the attention of the Ontario Government and Premier Drury, who now represented the constituency in which the speaker was a resident, promised to give the matter serious consideration and bring in a new assessment act at the next session.

Mr. Mackenzie then touched upon the good work of the Ontario Retail Lumber Dealers' Association and what it had been able to accomplish in the interests of the dealer. Local associations were equally as essential and by working together, the district and provincial bodies had brought about an improved condition in many ways relating to sales by manufacturers and wholesalers to farmers' clubs, blacksmiths, hardware merchants and other tradesmen, who were not legitimate distributors of forest products. There was a great deal to be gained in one dealer knowing the others in his town and also those in the surrounding district. He felt that when men were acquainted with one another, they recognized that after all their competitors were pretty decent chaps, and the good fellowship of these district meetings could not be overestimated. Mr. Mackenzie said he would be pleased to tell what his district was doing in any retail matters, and he wished the Stratford organization every success and encouragement.

G. B. VanBlaricom, editor of the "Canada Lumberman," also spoke briefly, telling of the benefits of co-operation and what had been accomplished by district associations in talking over various local problems and clearing away any difficulties that might arise. Many questions, which were purely local in character, could be disposed of through the district bodies, while the larger and more important affairs of retail lumbermen were handled most efficiently by the Ontario Retail Lumber Dealers' Association. He conveyed the regrets of Mr. H. Boulton, secretary of the O. R. L. D. A., at not being able to attend owing to an important previous engagement which could not be broken.

Many Trade Topics Reviewed

Among the subjects discussed informally were the general labor situation and the demand for shorter hours, the price and production of lath, the shingle market, standard order forms, the principle of which was endorsed, as well as the adoption for the Ontario trade of a set of standard thicknesses and widths for mill work lumber and timber and standard designs and mouldings. The use of motor trucks for delivery purposes was also taken up, D. C. Baird, of St. Marys, giving some interesting experiences in regard to his use of two Ford trucks and a trailer. The question of charging for delivery of small lots of lumber was also brought up, one member declaring that he made a uniform levy of 50c in order to cover the wages of a man and rig; otherwise on small lots any profit on the transaction

Robert Oliver, Listowel, Ont.
Re-elected Chairman of District

E. K. Kalbfleisch, Stratford, Ont.
Re-elected Secretary-Treasurer

J. J. Cluff, Seaforth, Ont.
Re-elected Member of Executive

D. C. Baird, St. Marys, Ont.
Re-elected Member of Executive

would be eaten up by the cost of delivery. An animated discussion took place on the matter of selling present stocks of lumber at replacement values, and in this connection the new taxation provisions, recently brought down at Ottawa, were thoroughly discussed.

Among those present were Robert Oliver, Listowel; J. Boshart, Milverton; E. J. Erb, Brunner; Wm. Eizerman, Mitchell; N. Wetlaufer, Tavistock; George S. Zimmerman, Tavistock; R. C. Bamford, Listowel; E. Fleischauer, Stratford; D. C. Baird, St. Marys; E. K. Kalbfleisch, Stratford; J. B. Mackenzie, Georgetown; G. B. VanBlaricom, "Canada Lumberman," Toronto.

Eastern Market Extension Working Well

The Toronto lumber commissioner's office is doing effective work in the way of promoting the sale of British Columbia forest products and it will be maintained. Hon. T. D. Pattullo, Minister of Lands, said shortly after the session that the department is now looking for men capable of administering the office permanently, so that William Robertson, temporarily filling in at Toronto, may be released to resume his duties at the Victoria head office. Several applicants for the position have already filed their credentials with the department, and the appointment will be made within a few days, according to the minister.

The British Columbia woods, their qualities and uses, will be kept constantly before the dealer and the consumer, was the assurance given by Mr. Pattullo. He stated that much good work is being done in Eastern Canada among engineers, architects and wood users generally, while an educational campaign is being carried on in the manual training schools of Ontario, where the building construction men of the near future are being trained.

Mr. Pattullo also pointed that, since the securing of ground floor premises on Adelaide Street, East, the office of the British Columbia lumber commissioner has attracted much attention and is doing good general publicity work for the province as a whole. The commissioner reports that he is kept busy answering all sorts of questions regarding the climate and resources of British Columbia, and it was found necessary recently to send him a large quantity of general information bulletins for distribution among Easterners who are casting longing eyes on the Pacific Coast.

Judgment Given in Quebec Case

With Justice Carroll dissenting, the Court of Appeals, Montreal, reversed a judgment of the Superior Court at Quebec by rejecting the petition of the Compagnie des Bois de Natagan et al asking for an interlocutory injunction against N. H. Gilbert to restrain him from running logs on Lake Natagan and the River Natagan during the season of 1920.

Appellant and four of the respondents formed a syndicate and agreed to subscribe capital for operating timber limits in Piedmont, County of Temascamingue. Subsequently appellant notified other members of the syndicate that he withdrew from the enterprise. He was protested to take 100 shares in the company and pay for the same as calls might be made. He, however, declined to do as asked, but notified the company that as he had about 800 cords of wood in the region, he required the use of the River Natagan this spring for the drive of his logs. The company thereupon applied to Court, asking for an interlocutory injunction to restrain him from driving his logs down the river pending judgment on the issue whether he can be compelled to take up and pay for the capital stock he is alleged to have agreed to take in the company.

The interlocutory injunction was issued and appeal against this decision was yesterday maintained by a majority of the Bench, on the ground that the balance of convenience was in favor of the appellant. The merits of the pending action against appellant, it was pointed out, would decide if he had committed wrongful acts, and award damages accordingly.

Lumber Concerns Busy in Hastings County

Lumbering activities have been very brisk in the township of Mayo, Hastings County. Mr. Fred Adams, lumberman, of that section, reports a splendid cutting season during the past winter. He states that twenty or twenty-five years ago the lumbermen went through Mayo and the adjoining townships and cut out all the pine that was merchantable, leaving other woods, which at that time were not thought to possess any great value, but conditions have changed. Standing timber has increased in the dollars and cents basis from year to year, and this has resulted in active lumbering undertakings. There are still large quantities of maple, birch, hemlock, spruce, balsam, ash, basswood and cedar in that section, and the demand for these forest products is far greater than the possible supply. During the past winter Ferguson & Findley took out about two million feet of logs in and around Mayo; the Hanlan Lumber Co., two million

feet; Mackay & MacCreary, one million; Harris Tie & Timber Co., a large quantity of railways ties, cedar posts and poles; and Frank White, Reeve of Mayo, about three hundred thousand feet of logs.

Combination Doors Featured by Lumber Firm

R. Laidlaw Lumber Co., of Sarnia, are featuring at the present time their combination door which may be changed from a storm door to a screen door in five minutes and vice versa. Certain standard sizes are carried in stock.

In addition to featuring this combination door and combination storm and screen window and pointing out that these conveniences save fuel, the R. Laidlaw Company have issued a neat illustrated leaflet, stating that houses with storm windows and storm doors require from one-third to one-half less coal than the ordinary kind, and in these days the saving of fuel is a big consideration. It is emphasized that the storm equipment pays for itself in one or two seasons and that storm windows and storm doors increase the comfort and healthfulness of a dwelling, eliminate draughts, make it possible to keep warm in the severest weather and at the same time have perfect ventilation.

To convert a storm door into a screen door or a storm window into a screen window, it is merely necessary to lift out the sash or frame of the former and insert another frame. This requires only a few minutes.

What Ottawa Mills Sawed in Early Seventies

The "Trade & Manufacture of Lumber for 1874" shows the production of lumber in the Ottawa Valley for that year. It will be noticed that some of the firms producing in 1874 are still in business; the number of firms in the Ottawa Valley lumber trade has decreased, but the individual cuts have increased:

Name of Firm.	Saws.		Season. Capacity	Lumber Cut 1874	Lumber Held Over.
	Gang	Circular			
E. B. Eddy, 4 mills	22		75,000,000	55,000,000	20,000,000
Gilmour & Co.	20		50,000,000	50,000,000	11,000,000
Bronsons & Weston	9		45,000,000	30,000,000	3,000,000
J. R. Booth	8		30,000,000	22,500,000	11,000,000
Perley & Pattee	5		25,000,000	21,000,000	9,500,000
Battson & Currier	5	2	32,000,000	16,000,000	1,000,000
A. H. Baldwin, 2 mills	6		20,000,000	15,000,000	6,000,000
John Rochester, 2 mills	4	1	20,000,000	15,000,000	3,000,000
Hon. J. Skead	3	1	20,000,000	14,000,000	9,000,000
Jas. McLaren & Co.	3	1	20,000,000	12,000,000	1,500,000
Conway Estate	4		19,000,000	13,000,000	4,000,000
Levi Young	2		15,000,000	10,000,000	5,000,000
Crandall & Co.	3		20,000,000	7,000,000	2,500,000
McClymont & Co.	4		10,000,000	6,000,000	3,000,000
R. W. Cruise			18,000,000	10,000,000	
Cameron & Co.			50,000,000	29,000,000	17,000,000
McLaren & Co., 2 mills	5		35,000,000	25,000,000	7,000,000
Bangs & Co.		1	6,000,000	4,000,000	1,500,000
McLaren & Co.			12,000,000	8,000,000	2,000,000
Ross Bros.	4		25,000,000	18,000,000	4,500,000
Martin Scott			6,000,000	4,000,000	2,000,000
Peter McLaren	5	1	18,000,000	18,000,000	14,000,000
Gillis & McLaren				6,000,000	4,000,000
Boyd, Colwell & Son	2	1	20,000,000	8,000,000	5,000,000
McLaren and McRae		1	4,000,000	2,500,000	2,000,000
Gillis Bros.	3		11,000,000	8,000,000	8,000,000
Hilliard & Dixon			6,000,000	3,000,000	2,000,000
McLochlan Bros., 3 mills	6	2	20,000,000	15,000,000	4,000,000
Capt. O'Neil		2	6,000,000	2,000,000	1,000,000
Jas. McCune	0	2	6,000,000	2,000,000	500,000
Mallock & Adams		1	2,000,000	1,500,000	250,000
McDonald & Co.		1	3,000,000	1,000,000	1,000,000
Lothar Mills			17,000,000	9,000,000	5,000,000
Hamilton Bros., 4 mills	13	1	40,000,000	25,000,000	5,000,000

It was further stated that within the limits of Ottawa, Hull and vicinity, immediately upon the banks of the Ottawa, the Chaudiere, Mississippi, Rideau, Gatineau and Madawaska, with all other small rivers, there were 48 saw mills. There were mostly gang mills, many of the gangs being of the double type. There were 131 slabber and stock gangs, 17 double gangs and 13 large circulars for sawing dimension stuff. The lumber manufactured in 1874 totalled 497,000,000 feet, and the lumber on hand at the mills totalled 187,250,000 ft.

On making a comparison with the Ottawa Valley cut for the last three years we find the figures to be:

In 1919—297,950,350 feet.

In 1918—354,300,000 feet.

In 1917—428,330,987 feet.

Forest Fires Do Some Damage

A forest fire which started recently near the village of Albany, Annapolis County, N. S., spread rapidly. Much timber land was destroyed and five buildings burned. The buildings were the Alpena railway station, on the Halifax & Southwestern division of the C. N. R., a barn and cook house belonging to the Davison Lumber Company, and two dwellings. Fifty men were engaged in fighting the flames which were finally got under control.

Production—Relation to Lumber

By A. O. Fisher, Barrie, Ont.

In the year 1820 Upper Canada as the province of Ontario was then known, was but a wilderness of forest. The forest growth stood as it had stood for many hundred years. Immense tracts of the largest and best white pine stood in original splendor untouched by the axe of man.

In Eastern Ontario the growth of timber consisted of maple, beech, oak and some hickory.

In the more southerly part of the province, in sections, were stands of chestnut, walnut, sycamore and whitewood, with oak, beech and maple interspersed. At this period many of the old original pioneers of the country began to arrive to carve their fortune in the new land of Canada. Many of these arrived in the country with but little else than an axe and a good working set of brawny muscles. These early settlers had to chop miles of trails before they reached the land whereon they settled. They built a rude log shanty, which consisted probably of two rooms. In one of the rooms a large fireplace would be built large enough to burn a good-sized pile of large logs. The chimney, as well as the fireplace, was constructed of stones, gathered laboriously on the farm location. These stones were cemented together with clay.

Having provided this crude home for himself and his family, the new settler proceeded to underbrush and fell the trees surrounding his shanty. When the trees were cut into lengths that could be handled, they were sorted in piles and burnt.

Horses and oxen were scarce in those early days and the settler's greatest desire was to obtain a yoke of cattle to assist him in clearing up the land.

After clearing a few acres of the bush land, when the proper season came around, potatoes were planted among the stumps, and in another patch oats would be raked into the soil.

During this time and while the settler was clearing his land, he had to make periodical visits to the nearest store, which in many cases was fifty miles from his location. This fifty miles was tramped over a rough trail through the forest. When his purchases were made, the return trip was undertaken under worse conditions as he was then hampered with a heavy load. Many of these early settlers carried one hundred pounds of flour on their backs the distance stated and over roads which would now be considered impassible.

After the settler had obtained a yoke of oxen, his work of getting in supplies and of clearing the land, was greatly lightened.

The First Crude Wood Vehicles

The vehicles in use in those early days consisted of a "jumper" or sleigh for use in winter and a cart for use in summer. Both of these were made entirely of wood. The wheels of the cart were made by sawing blocks eight inches wide off the end of a large log and boring the center to run on a wooden axle. To keep these primitive wheels from falling off, a smaller hole was bored near the end of each axle and a pin driven in. The axle and wheel both being wood and the settler having no lubricant, the friction caused by the revolution of the wheels caused a continual squeal of protest to proceed from the cart. This squeal could be heard long before the settler and his cart could be seen.

Those early settlers' watchword was production and with them it was either production or starvation.

In older parts of the province none of the old original settlers remain. They are gone but they have left an heritage to the generations that are here and those that will follow, those good fertile lands that need but the work to produce abundantly many of the commodities necessary for the welfare and upkeep of those who have not the privilege of growing the means of their sustenance.

In 1870 many of the original settlers, after years of arduous work, had reached such an age they could not perform the work of the farm. At this time the work of the farmer was done with the crudest of implements. The ground was ploughed with an old-fashioned plough, with the plowman following behind, holding the handles to guide it.

The harrow was a primitive tool made with wooden crosspieces wherein were set iron pins. The grass in its season was mown by hand with a scythe. The grain was cut with a cradle, raked and bundled by hand, and, after it was dried and stored, was threshed by hand with a home-made contrivance called a flail. About this time the work of many of these first farmers passed on to one of his sons. Like his father who had cleared the farm, he had as his

watchword production. His delight was to grow as much wheat, oats, potatoes per acre, as it was possible for the land to produce.

As the years went by, labor-saving devices were made for his use, such as riding ploughs, seeders, mowers, binders and many other machines designed to lessen his labor.

But coming to the year nineteen hundred and twenty, one hundred years after the original owner and grandparent of the present owner had first commenced to hew his farm out of the primeval forest, what do we find?

The Day of Progress Arrives

The land, which in 1820 stood thick with a growth of large forest trees with a little log shanty set in the midst of the few acres of clearing, that land now has neither stump nor stone. The only trees growing on it are ornamental ones planted by the present owner on a fine lawn. The old log shanty and the log barn and stable have passed away in their place stands a fine brick house with oak floors, electric light, furnace and all the conveniences of a city home. The log stable and barn is replaced by a good frame building with a concrete basement for stabling the cattle and horses. All the modern labor-saving implements may be found on the farm in an implement shed, if not in use, but more likely they will be found lying around the barnyard or in the fence corners. On the farm you will also find a garage and in it a good motor car if the owner is not using it in attendance at some dance, social function, or at a meeting of the U.F.O.

But with all his machinery to help lessen labor—and incidentally decrease overhead in pay for hired help—is the owner crying production? Not at all. He is a wise guy. He knows that if he and his neighbors plant ten acres of potatoes each this spring, that the price of potatoes may be sixty cents per bushel or the peck., but he and his neighbors, at a meeting of the U.F.O., say we will grow one acre of potatoes this season and we will ask and shall receive in the fall \$4.00 per bushel. They reason while they are cultivating ten acres they would have to devote a great deal of time to the work which could more profitably be used in motoring. The same remarks apply to other products of the farm. Sow less wheat, less oats, less of everything, pasture more, lessen the labor of the farm, decrease the supply and demand will fix the price.

How They Regard the Lumber Dealer

Yet, these same well informed? progressive? farmers if they require lumber, shingles, cement or anything they cannot produce, when they approach a dealer enquiring for prices and hear it, consider the dealer a brigand, forgetting that the farmers are the cause in the first place of the high price of manufactured products. The high price of wool makes dear clothing, the high price of wheat makes dear flour, insufficient production makes everything excessive to the consumer, even to the farmer, who should, he thinks, be exempt.

If in 1914 a logging gang could be boarded at the rate per man of twelve dollars per month and if, through high price of flour, beef, pork, etc., it now costs \$40.00 per month per man to maintain a camp; in spite of the U.F.O. or any other society, the farmer of 1920 will help pay that difference when he buys shingles, lumber or any product of the forest or manufactured article whatsoever.

Expansion of Sawmills in the East

There is great activity in the lumber trade and also the pulp and paper line throughout the Maritime Provinces and all the plants have made preparations for a large output and a busy season.

The Fraser Companies have added a rotary outfit to their Nelson mill in the Miramichi District, which will considerably increase the capacity. The Miramichi Lumber Co. are erecting a new sawmill at Douglastown, the machinery being supplied by Waterous Engine Works and P. B. Yates Machine Co. Wm. M. Sullivan has added a Hamilton steam tension band mill and steel carriage to his mill which will practically double its capacity.

The Shepard & Morse Co. at Gaspé are erecting a 25 x 100 ft. refuse burner and have also made some changes in the mill equipment with a view to saving wood waste.

The new mill of the Fraser Companies at Campbellton is nearing completion and they hope to have this plant running within a short time.

Many other changes and developments are under way, and it is pleasing to record the progress and expansion of the industry.

"Give fools their gold and Knaves their power,
Let Fortune's bubbles rise and fall;
Who sows a field, or trains a flower,
Or plants a tree, is more than all."

—John Greenleaf Whittier.

Personal Paragraphs of Interest

J. McKergow, president of the Montreal Lumber Co., died in Montreal, on May 16th, from pneumonia.

G. H. Edgecombe, Ottawa, has been appointed surveyor of forest resources for the Commission of Conservation.

The Martin, McPeak Lumber Co., Ltd., have removed from the Transportation Building to 99 St. James Street, Montreal.

H. J. Terry, of Terry & Gordon, Limited, Toronto, who has been on a business trip to the Pacific Coast is expected home this week.

H. R. MacMillan, of the H. R. MacMillan Export Co., Vancouver, B. C., is in Australia on a business trip at the present time looking into the export lumber situation.

T. J. Stevenson, sales manager of the Riordon Sales Co., Ltd., Montreal, has left for a four months' business trip to Europe. He is accompanied by Mrs. Stevenson.

Archibald Maddaugh, of Maddaugh & Co., lumber merchants, St. Catharines, Ont., passed away in that city recently at the age of 74 years. He was widely known in the industry.

W. J. Van Dusen, of Vancouver, B. C., former district forester for that province and now associated with the H. R. MacMillan Export Co., spent a few days in Toronto recently.

Hon. W. J. Bowser, of Victoria, B. C., recently spent a few days in the East, and states that business conditions in the Pacific Coast province are exceptionally active. The pulp industry is being taxed to capacity to meet the demands of Japan and Australia.

I. H. Cooper, managing director of Patterson and Co., Ltd., of Dublin, Ireland, one of the biggest British match manufacturing concerns, has visited Grand'Mere. His firm has for 18 years purchased the Laurentine output of yellow board for match boxes.

The many friends of T. Edgar Rathbone, of George Rathbone Limited, Toronto, will sympathize with him in the death of his wife, which took place recently at the family residence, 183 Westminster Ave., Toronto.

P. B. Morency and Mr. Relyea, of Price Brothers, and Mr. Ben Avery, forester, and Mr. Simpson, aviator of the St. Maurice Pulp and Paper Company, have visited Grand'Mere, the guests of the Forestry Department of the Laurentide Co., looking over the preparations for the aerial forestry patrol work.

E. Kelly, manager of the British Smelting and Refining Co., Montreal, is now on an extensive business tour. He is not expected back for about four months. W. T. Newman, who was for a number of years with B. and S. H. Thompson Co., Ltd., is at present in charge of the Montreal office.

W. H. Harris, of the Frank H. Harris Lumber Co., Limited, has returned from a five weeks' business trip to the company's mills at High Point and Lake, Miss. He reports that the weather in the south has been very wet but the roads are now improving, labor conditions are somewhat better and the mills generally have caught up with production.

Chas. Riordon of St. Catharines, president of the Riordon Pulp & Paper Co., of Montreal, has received word of the death of his son-in-law, Sir Hamilton Gould-Adams, late Governor of Queensland, Australia, whose wife was before her marriage, Miss Elsie Riordon. Sir Gould-Adams contracted pleurisy while enroute to South Africa from Australia, the attack proving fatal. He was formerly Governor of Crete. The body was taken to London, Eng., for interment.

F. D. McIntyre died recently at St. Paul's Hospital, Vancouver, B. C. He was associated with the late Chas. W. Tait in the Fernridge Lumber Co. and successfully managed the Rosedale mill. In conjunction with Messrs. McNair and Graham he later built a mill at Clayton. Despite the loss of an arm through an accident, the late Mr. McIntyre was a skilful mechanic and drove a motor car with great ability. His passing is deeply regretted by a wide circle of friends.

William Barrett Thomson, formerly of Orillia, Ont., passed away at his home, 483 Brunswick Ave., Toronto, on May 18th in his 78th year. He was born in Arnprior and was for a long time engaged in the lumber business in that town and during his life-time pursued his calling from Ottawa to Muskoka. The late Mr. Thomson resided in Orillia for many years and was engaged by the Ontario Government as timber estimator for a considerable period. Of late years he had resided in Toronto. The remains were taken to Orillia for interment. He is survived by his wife, three daughters and one son, J. C. Thomson, of Toronto.

The Hocken Lumber Co., Limited, Toronto, have established a planing mill in connection with their sawmill at West River, which is located some twelve miles south of Espanola. The planing mill will be an extension of the service rendered by the company, and is well equipped.

New Wholesale Lumber Firm Launched

A federal charter has been granted to the Central Canada Lumber Co., Ltd., Toronto, and a capital stock of \$200,000. The company have opened offices at 402 Excelsior Life Building, Toronto, and will specialize in both hard and softwoods. The president and managing director is C. W. Wilkinson (Union Lumber Co., Toronto). R. G. Dinsmore (Bethune Pulp & Lumber Co., Huntsville) is vice-president, and the secretary-treasurer is G. O. Fleming, son of R. J. Fleming, Toronto. Mr. Fleming served for a considerable period overseas with the Canadian Railway Troops.

Regarding the new organization it may be mentioned that Mr. Wilkinson will retain his connection with the Union Lumber Co., while Mr. Dinsmore is still president of the Bethune Pulp & Lumber Co. The men behind the Central Canada Lumber Co. are experienced, practical and aggressive and the new firm should meet with every success and prosperity.

Imperial Forestry Conference Next Month

M. A. Grainger, chief forester for British Columbia, will leave shortly to attend the Imperial Forestry Conference which will be held in London, Eng., from July 5 to 17.

While the conference is in progress an Empire Timber Exhibition will be held in London, at which the various overseas countries will have displays of their lumber resources. Canada will join with the others, and an exhibit illustrative of the timber wealth of the various Provinces will be made.

At the Imperial Forestry Conference one of the chief items to be dealt with will be the making of provision for the compilation of an estimate of the timber within the Empire, the varieties, etc. The necessity of the development of the resources and of inter-Imperial trade was the motive behind the move for the conference, and the deliberations thereat are expected to prove of great importance to the future trade activities within the Empire.

Consolidation of Riordon Interests

The directors of the Riordon Pulp and Paper Company, Ltd., and the Kipawa Company, Ltd., Montreal, have made proposals to the shareholders to consolidate the concerns.

Under the plan the new company will assume the liabilities of the Riordon Company, including the liability represented by outstanding bonds and the issue and delivery to Riordon Company of \$1,500,000 of 8 per cent. cumulative preferred stock, \$9,000,000 of 7 per cent. cumulative preferred stock carrying full voting rights and convertible into common stock; and \$12,000,000 of common stock, and such additional amount of common stock as may be approved by directors to be used for the benefit of the new company.

The basis of the sale of the Riordon Company's assets to the new company is the issue of 8 per cent. cumulative preferred stock of the new company to the amount of the outstanding 7 per cent. preferred stock of the Riordon Company and the issue of 1½ shares of 7 per cent. cumulative convertible preferred stock of the new company and 2 shares of common stock of the new company for every share of common stock of Riordon Company now outstanding.

Riordon Company will continue in existence, its operations being practically restricted to those of a holding company. Dividends to be received on the securities so held will be amply sufficient to provide for the maintenance of present dividends on the outstanding preferred and common stock of the Riordon Company and present shareholders, according to the circular, may look forward with confidence to further returns conditional upon the successful operations of the new company.

Will Increase Cut by Two Millions

The Field Lumber Co., at the head of which is Z. Mageau, M. P. P., Sturgeon Falls, now have their sawmill at Field, Ont., in operation, with an ample supply of logs. The lumber situation in that section is very good but wages are exceedingly high. The cut at Field this year will be increased by a couple of million feet. One handicap in driving the logs has been the north and northwest winds which prevailed during two or three weeks and delayed driving, all of which adds to the cost of lumber.

The Quebec Forest Protective Association, Limited, have issued a souvenir of the annual conference held in January last. This is in the form of an excellent lithographic picture entitled "A Tense Moment." It represents two hunters on the bend of a lake, with a moose in the foreground. One of the hunters, standing in the front part of the canoe, is motioning to his companion to keep quiet, while he prepares to pick up the gun, which is lying ready at hand. The picture is beautifully reproduced in colours.

The Biggest Thing I Have Learned in Business

Honesty and Industry and Their Relation to Progress—There is no Half Way Ground and no Twilight Zone—Romantic Career of Lumberman

By Robert A. Long, Kansas City, Mo.*

Robert A. Long, Kansas City, Mo.

What is the biggest thing you have learned from business?" a man asked me the other day.

"That the game of life isn't won by 'star plays,'" I answered.

"Once in a while it is," he protested.

"Yes—about once in a thousand 'whiles,'" I admitted.

"Well," he persisted, "what does the trick in the nine hundred and ninety-nine other cases?"

"Honesty and industry," I said.

He looked disappointed.

"Old stuff!" he remarked.

"Yes," I agreed; "so old that it has been tried and proved through years and generations and centuries. And yet most people don't believe it until they have proved it all over again in their own experience."

I know that I had to do this proving myself. I do not grasp new ideas quickly, and I lay absolutely no claim to being a business genius. Back of whatever achievement I have made are simply the two qualities of honesty and industry.

But perhaps my definitions of them are different from the commonly accepted ones. As I understand it, honesty is not merely refraining from stealing; and industry is something more than just doing the job set before you. Both must be positive and elastic—not bound to the dry letter of the law. They must be used as weapons that help one to conquer; not simply as shields that protect one from out and out defeat. It was industry that gave me my start. I came honestly by it, for I was born into a family where hard work was a habit. When I was a boy, we lived on a farm in Shelby County, Kentucky, about twenty-five miles from Louisville.

That farming was hard work. I did not mind the work, but it did not seem to me to offer much of a chance for the me.

From the time I was a child, I had an example of industry before me. Often my father, when he had business in what, to us, was the "big city," would have traveled that twenty-five miles on horseback and have reached Louisville before the townspeople had finished breakfast.

It was always his idea that a day should be started early; and that has always been my idea, too. I am usually at my office even now before half-past seven o'clock in the morning.

That farm was hard work. I did not mind the work, but it did not seem to me to offer much of a chance for the future. I went through the district school, and then I had a few months in a boys' school at Shelbyville. On the side I made a little money gathering hickorynuts and wanuts, stripping blue grass, and the ordinary odd jobs that a restless farmer's boy can pick up, including a season of clerking in the country store. But I wanted to get away—I wanted to get out.

The Possibilities of the Southwest

The great Southwest was then opening something of its possibilities. We were hearing a good deal about Kansas City, and I had an uncle there. I had seven hundred dollars when I reached Kansas City in 1873, and I was twenty-two years old. Every cent of my money had been made by working about the farm.

My uncle was cashier of the local bank at Kansas City and he was willing to help me—but there didn't seem to be anything to help me in. I lived with him and his wife, and it embarrassed me to be hanging around, for they would neither take money for my board nor permit me to go anywhere else. Idleness has always been very distasteful to me; so I more or less elected myself housemaid; although I had not, any more than would another healthy boy of twenty-two, any great fondness for impersonating a charwoman instead of setting out on a business career.

But I had to do something to make myself feel even approxi-

mately worth while, and I did my best to take charge of that house. I swept the rooms, made the beds, did the gardening, and anything else that I could put my hands on, excepting the cooking. I had no plans, but I had ambition—without direction. It never occurred to me that qualifying as a first-class houseman would put me on the road to fortune, and yet that is exactly what it did.

My uncle recognized that I was doing this work not because I liked it, not from any desire to avoid harder work, but merely because I did not want to be idle. And this impressed him so much that one day, after I had been there about a year, he suggested that with his son Robert, and Victor Bell, the son of the president of the bank, I go down to Columbus, Kansas, where we could try our luck putting up hay. The grain crop was short that year, but the grass crop in Kansas was particularly good, and there seemed to be an opportunity to turn a dollar.

I put in all of my money, the other two boys, neither of whom was over twenty, put in a somewhat smaller amount; and the bank volunteered to look after several carloads of lumber to build sheds to cover the hay, and started gayly off to make our fortunes.

The hay crop was splendid—all that it had been said to be—but we got on the ground rather late, and the hay we bought turned brown and was all but unsalable. We got rid of it as best we could, and, curiously enough, the lumber which we had bought incidentally sold for more than the hay upon which we had staked our all. When we had wound up our affairs, and paid the bank in full, we discovered ourselves perhaps a little bit wiser for our experience, but certainly a good deal poorer. My own personal funds, as well as the funds of my partners, were exhausted.

That sounds like a bad start. It was not. I had been given the chance only because my uncle liked the way I worked around the house; he knew I was willing to work. But now, having settled in full for every debt, and not having attempted to compromise anything simply because we had lost money, we convinced the bank that, as well as being industrious, we were also honest. They knew perfectly well that operating at a distance we might very easily have let the bank instead of ourselves bear the losses. Losing our money actually helped our credit!

Asked Him to Start Lumber Yard

I had been the active manager of the hay venture, and when I was leaving Columbus several of the citizens who had bought the lumber from our sheds asked me to come back and start a lumber yard. It appeared that the local dealer had a reputation for being a little too sharp; and, whatever may be said about business acumen, people do not like to trade with anyone who is continually trying to get an unduly long end of the bargain. They want to have confidence.

Back at my uncle's house in Kansas City I went over the situation with him, and before I had even finished the whole harrowing tale he cheerfully came out with:

"My boy, where you lost your money is the place to make it again!"

"But," I answered, "I have no money to start anything. I have not ten dollars to my name."

"Don't let that worry you," he said. "Come down to the bank and we will see what we can do."

I joined with Victor Bell once more and we journeyed to the bank somewhat skeptically to learn how we were going to start in any business without money. The bank officers treated our first venture as a joke. I know now that they acted that way in order to give us encouragement. They said that they would be very glad, indeed, to open up a credit for us of eight thousand dollars; and, to show just how much I knew about business, I will admit that I did not know what credit was. I couldn't understand why they did not have us sign notes; and when the time came around for the first check to be drawn against the account, I actually did not know how to make it out.

That bank did not loan money to us on our business skill. It loaned it because the officers knew that on our previous venture we had done everything that mortal could well do to make it a success, and that we had met our creditors in full. Our character was their first consideration.

We opened our yard at Columbus, and immediately began to

*In the American Magazine.

do a fair business. We paid for everything that we bought, and gave to every man who bought from us exactly no more and no less than we said we would sell to him. The railroads were then just branching out through Kansas. The log cabins of the pioneers were being replaced by frame dwellings, and we were on the spot to sell lumber.

Then and there I learned another point about honesty—the positive as against the negative side. No matter how much one may want to be honest, he cannot be really honest unless he first be accurate; this is the broader conception of honesty. You may think that you are honest; but if you are slipshod and keep your business accounts badly, you are inviting failure. And to fail through carelessness is not honest.

Intentions Pigeonholed Do Not Achieve

It does not help matters to have an intention of being honest, for pigeonholed good intentions do not accomplish much. I take it as an integral part of honesty that a business must not only be accurately and carefully accounted in every detail, but that every known method should be used to maintain those accounts at the human maximum of accuracy.

I soon learned in that little woodyard that money was not to be made unless we had a complete account of everything that went in and out; and, although I began the active work in the yard anywhere from four to five o'clock in the morning, I spent the end of the day—that is, anywhere from eight until ten o'clock in the evening—making up the accounts. You see, I was not only general manager, but I was also the whole lumber-handling force, the selling staff, the office force, and everything else. It was hard work, but it was fun. Anything that it worth while is hard work. Nothing in this world is handed out on a platter—except possibly bankruptcy.

It was fun because we were growing. It was fun because the big country was opening up around us. And it was fun because, in one corner of the woodyard, I ran up a little three-room house, married a girl I wanted to marry, and set up housekeeping.

Of course, we did all the work ourselves, and we had a jolly time of it. I helped with the housework and she helped with the business. It was our work. I well remember how fearful we were that the bringing in of a hired girl, after our first baby came and my work so grew that I could not help about the house, might perhaps break up the aloneness that we loved so much.

Those days, of hard but joyous work with little money and great hopes, were, I think, the happiest I have ever known; and sometimes my wife and I become wistful of them. We would almost be willing to give up everything that we now have if we could turn back the clock and get again into that little three-room house with its farthing's worth of furnishing. But that is another story.

Our business grew. We branched out into many parts of Kansas and into Missouri. Whenever a section opened we were there, right on the heels of the pioneers, ready with the lumber. We were in Oklahoma when it was opened to settlers. We were down in the Indian Territory. We were ready when the panhandle of Texas was being divided up into farms. And we were able to go so far and so quickly largely because of our reputation for honesty.

Being Frank and Open with Banks

The banks knew us; they knew that we never asked for money for speculating purposes, but only for legitimate business ventures; and that, before asking for the money, we would already have arranged for its repayment. If they wanted to know exactly how we intended to repay them they had only to ask. At any time that they wanted to discover how we stood, our books were open to them. So many young men do not seem to understand that it is this sort of reputation which gives the means of taking advantage of the really first-class opportunities that present themselves.

The right sort of man does want to go out and borrow money as a personal favor. He does not want his business money as an act of charity from anyone. He wants it solely on a business basis, advanced by an institution which is engaged in lending money for profit. That is the clean way of doing business, and it is founded on honesty. Just the other day I wanted some additional credit. I went into a bank in a distant city where we had kept a small and not very active deposit for some years, about one hundred thousand dollars, and I said to the president:

"I should like to do more business with this bank, but as a consideration for that I will want a credit of one million dollars."

"Anything you like!" answered the president instantly. "We want all of the business you will give us."

And that is all there was to borrowing a million dollars! Back in 1908, when the money panic came on, we owed about seven hundred thousand dollars, and if we had been forced to pay it all, we should not only have gone down but a number of banks would have gone down with us. All kinds of pressure were brought from the outside to force the banks, but we were never bothered.

When my partner, Mr. Bell, died we were still in partnership,

and it would have been extremely inconvenient to have had all of his interest taken out at once. But while I was making ready to meet that situation, his widow announced that she did not want the money out, that she did not know of any place that it would be as safe as where it was, and she paid me a compliment that I have always cherished:

"I know Mr. Long. He is honest. If he lives he will pay, and if he dies he will pay from the other side of the grave."

In all my business life, extending back now through forty-six years, I have never been really pinched for money to carry on operations; and it has been because my credit has always expanded with my needs.

Now as to industry, which should be as inseparable from honesty as is accuracy. The remark, "That fellow is lazy," will kill credit about as quickly as the remark, "That fellow is not straight."

No one can truly make good unless he works unremittingly, and no matter how stupid he may be at the beginning, that stupidity can be overcome by unflagging application in everything that concerns the business in which he is engaged.

In the first lumber yard I always worked from before daylight until after dark; and for many years I kept up the practice. I kept it up until the business branched out into yards all over the Southwest—into lumber mills, great tracts of forests, reclamation projects, coal mines, and a multitude of other interests. I kept it up until, even if there had been fifty hours in a day, I could not have known all that was going on.

Then I began to delegate, to give the charge of this to a man whom I knew to be honest and industrious by test, and that to another, similarly qualified. I sat in the center, read the accounts, and directed from them with a personal trip about now and again.

Instead of casting the accounts myself, they are cast for me. Each month I read nearly three thousand pages of accounts' reports. I read them in my office, on the train, wherever I happen to be; simply because I believe the chief executive who holds himself as the head of a business cannot, in honesty, delegate the final "O.K." to anyone.

For honesty, as well as industry, is personal. You have it or you do not have it. There is no half-way ground, no twilight zone. But the big point is that he who has and cherishes these qualities—and they are open to all—needs nothing more to attain success. A man may attain a reputation as a business genius simply by taking infinite pains to be honest and industrious.

Crown Timber Dues Are Increased

Hon. Beniah Bowman, Minister of Lands and Mines, recently sent out to the lumbermen of Ontario a notice in regard to the increase in dues on all timber cuts on Crown lands. The advances in some cases are quite heavy but it is distinctly set forth that the rates will not be increased again within the next five years.

Notice is hereby given that, by authority of Order-in-Council, dated the 27th day of March A. D. 1920, Section 14 of the Crown Timber Regulations has been repealed, and the following substituted therefor, to take effect on and from the 30th day of April 1920: these rates not to be again increased for a period of five years from the 30th day of April, 1920.

14. All timber, sawlogs, wood, or other lumber cut under any license now in force, or under any license which may be hereafter granted, shall be subject to the payment of the following Crown dues, that is to say:—

Black walnut and oak, per cubic foot.	\$.06
Elm, ash, tamarac and maple, per cubic foot06
Birch, basswood, cedar, poplar, per cubic foot05
Red and white pine and jackpine, per cubic foot07 1/2
All other woods, per cubic foot03
Basswood and poplar sawlogs, per thousand feet, B.M.	2.00
Pine sawlogs, per thousand feet, B.M.	2.50
Maple and oak sawlogs, per thousand feet, B.M.	2.50
Hemlock, tamarac and other woods, per thousand feet B. M.	1.50
Spruce, per thousand feet B. M.	2.00
Cordwood (hard) per cord50
Cordwood (soft) per cord.25
Tan bark, per cord60
Spruce pulpwood, per cord.80
Balsam and other pulpwood, per cord40
Railway ties, per tie10
Spruce boom timber	2.00
Pine Boom Timber	2.50
All other boom timber	2.50
Cedar Poles, 30 ft. and less25
Cedar poles, 31 ft. to 40 ft.50
Cedar poles, 41 ft. to 50 ft.75
Cedar poles, 51 ft. and over	1.00
Cedar posts, each02

What is Going on in the Pulpwood Arena

Pulpwood Restrictions Mean Prosperity

The pulp and paper industries have lately been prominently before the public by reason of the advances in the stocks of the various companies. The high prices obtained for the products leading to the establishment of new mills and the extension of existing plants. The advance made has been beyond expectations. When the boom commenced, there were many interested who were afraid that the addition to existing plants would be overdone, and that the production would be increased to such a degree as to lead to ruinous competition.

The result has falsified these prophecies. The demand for pulp and paper is unprecedented, and the prices obtained exceed all anticipations; nor are there any indication of a check to this prosperity. Exports are increasing every month and there is a large market in the United Kingdom which has practically not been touched. Instead of exporting our raw material of pulpwood, we are sending the manufactured products, thus employing thousands of men, and reaping the benefit which otherwise would be secured by mills in the United States.

The set of legislation is fortunately in the direction of compelling manufacturers who desire to obtain our raw materials to construct plants in this country—and the embargoes on the export of Crown lands pulpwood are notable instances of what can be done in this direction. Without these restrictions, it is certain that our pulp and paper industries would not have advanced to anything like the extent they have done.

Our forest wealth is great, but not so great that we can look without fear on the wholesale slaughter of our resources for the benefit of our neighbors across the border.

New Pulpwood Company Formed

Archie Alcorn, of Blackville, N. B., and Frank C. Murchie, of Milltown, N. B., have completed arrangements for the formation of a company to be known as the Alcorn-Murphie Pulpwood Co. Its object will be to procure all the pulpwood that can be purchased both for Dominion use and for foreign export. The members of the new company are widely known throughout New Brunswick, having been identified with the pulpwood business for years.

There is a great demand for all lands from which pulpwood can be taken. Edward London, of Canterbury, N. B., has sold 2,200 acres of wild land on the Shogomoc waters in York County, to Jas. M. Pierce, of Houlton, Me., and Arthur Patterson, of Penobscot, Me.

There have been an unusually large number of transfers in York County, N. B., recently. Americans from Maine and other parts of the United States are buying up every acre of woodland they can get in order to secure pulpwood to be shipped across the border.

Will Raft Wood Across Superior

Thirty thousand cords of Canadian pulpwood will be rafted across Lake Superior this season from Nipigon Bay to Ashland, Wis. It will go to the Pulpwood Company of Appleton, the handling of the rafts and transferring of the pulpwood from the water to the cars being in charge of the John Schroeder Lumber Company of Ashland. The Schroeder tugs Ashland, Henry F. Brower and Saugatuck will probably tow the rafts across the lake. The Canadian tug Traveler, which has been engaged in this work several years, was tied up at Ashland last fall, but was sold during the winter and will be taken to the Sault and perhaps to Lake Michigan. The block of 30,000 cords which will be rafted this summer is understood to be the last of a tract which the company has been operating for several years.

Last year, 37,000 cords of pulpwood was rafted to Ashland. During the last ten years or more, hundreds of rafts have been safely brought across Lake Superior on the Isle Royale-Ashland route, and during that time but two have been lost. The Apostle islands afford shelter extending out into the lake fifty miles, so that for two-thirds of the distance, from Nipigon Bay, the rafts are sheltered, either by Isle Royale or by the Apostles. Some pulpwood has been brought across the lake in the holds of vessels, but rafting has proved the most satisfactory, especially during July and August.

Kaiser Bill got more free write-ups than anyone we know of and now look at the darned thing. Yes, there is more to advertising than getting your name in the papers.

Thinks Pulpwood Prices Will Descend

Major F. C. Shorey, director of the Meigs Pulpwood Company, of Canada, recently said:

"The price of pulpwood is due to fall within a few months. Most of the pulpwood companies in Canada are increasing their production considerably. Last year was one of the leanest for pulpwood production—this year is one of the greatest. Our company has practically doubled its former production. The idea of the pulpwood industry making more money through holding back production and thus boosting up the price has no place in the minds of the captains of industry.

"The United States is the principal buyer of Canadian pulpwood. Our company sells to the States exclusively. In my opinion there is no chance of the embargo being lifted on shipments of pulpwood outside the limits of the Crown lands, and this will mean that the mills in the United States will be compelled to either locate in Canada or go out of business."

Export Pulpwood from Burned Areas

By a bill introduced in the Ontario Legislature by Hon. Beniah Bowman, Minister of Lands and Forests, authority is provided for the exportation of pulp wood from areas which have been burned over by forest fires. The object of the bill, as explained by Hon. Mr. Bowman, is to get the pulpwood cleaned off these districts quickly in order to prevent a recurrence of forest fires. He added that the districts to be cleaned up in this manner are not large, while the bill provides that the Government will decide what areas are included in the measure. Pulpwood, ordinarily, is not exportable.

Would Prohibit Ground Wood Export

"The action of the Provincial Government of Quebec in prohibiting the export of pulp wood cut upon Crown lands is on a par in its wisdom with Lloyd George's 'Patent Acts Bill' of England, and I am satisfied that not only should the export of pulp wood from Crown lands be prohibited, but that the export of groundwood manufactured from pulp wood from Crown lands, should also be prohibited," said Sir William Price, of Price Bros. & Co., Quebec, in a recent interview.

Government Plane Will Patrol B. C. Forests

Forest fire patrols in the Rocky Mountains and on the Pacific Coast will be undertaken shortly by Government civil air stations at Vancouver and at Morley, Alberta. From Vancouver survey operations and forest fire patrols will be conducted for the Dominion and Provincial Governments, and from Morley the Rocky Mountain forest reserve will be patrolled from the air and photographic and other surveys carried out. Preliminary arrangements to this end were discussed at a meeting of the Air Board in Ottawa.

New Aerial Service for Price Bros.

Lieut. George Vezine, the distinguished Canadian aviator, who was recently engaged by Price Brothers, Limited, to organize and direct an aerial service on their timber limits, returned lately from England, where he bought two large Martinsyde planes of a capacity of 275 h.p., to carry from two to six passengers. Lieut. Vezine announced that both planes are enroute for Canada. He also engaged three British photographers, one of them being Lieut. Nesbitt, who made the largest photograph of the war from an airplane. The new aerial service of Price Brothers will be in operation this summer.

Big Paper Company Uses Airplane

The Spanish River Pulp & Paper Mills are now building at Sault Ste Marie an airdrome to house their new marine airplane, which was purchased recently and will be used to survey their vast timber areas of the north. The flying boat type of airplane was decided upon as the many lakes, which dot the timber areas, afford excellent landing places. The airplane will have a cruising radius of one hundred miles and with fuel depots located at suitable places, it will be able to cover the district between the mills of the company between the Canadian Sault and Sturgeon Falls quite easily. The boat will be ready for its first flight in about two weeks' time and Flying Lieutenant Simpson, who served in the R. A. F., will be in charge of the craft.

What Next Won't the Tractor Do?

Down in the mountains near Tallihina, Oklahoma, there was a huge ash log, 14 feet long, 5 feet in diameter and weighing 12,000 pounds and it was 17 miles away from the nearest railroad. Without a tractor this log would have been a dead loss to the timberman, for every effort to get it to the railroad had failed until the Cletrac took hold of the job, loaded the log and made the haul through creek-beds and rough mountain roads to the car which was to take it to the mill. This is just one more example of tractor adaptability

Tractor hauling heavy ash log over rocky road

to the hauling problems of the lumberman—problems that remained unsolved until the modern, small, powerful and sure-footed crawler tractor was developed.

Lumbermen Deny Winch's Sensational Charges

Efforts on behalf of one dozen organizers, for the purpose of securing new members for the Lumber Workers Industrial Union, affiliated with the One Big Union, are to be put forth in Eastern Ontario and Ottawa Valley lumber camps, mills, and factories. Announcement to this effect was made early in May by Mr. E. Winch, secretary of the Union, who was in Ottawa seeing some government officials, and later went to Toronto to see Hon. W. Rollo, regarding the enforcement of provincial regulations in connection with sanitation in lumber camps.

When in Ottawa Mr. Winch charged that lumber companies and the Provincial Health Department were not making any attempt to see that the regulations were lived up to. "The conditions in the lumber camps in Ontario are a disgrace. They are in an unsanitary condition, and not in any one item do they conform to the regulations," he added. "What is the department of health doing? Is it doing anything to see that the law is carried out?" he asked.

In the British Columbia camps, he said, the conditions at the present time were much better than those prevailing in the eastern camps, and that lumbering companies were following the health regulations of B. C. to an extent undreamed of fifteen months ago, before the Industrial Workers Union was formed. He said the membership of the Union was now over 23,000, three thousand of which was in the Sudbury district. Mr. Winch is in charge of "The Worker," the official organ of the O. B. U., and the first issue of which was recently printed at Montreal. It contains a copy of the health regulations relating to lumber camps and is printed in French and English.

Among the counts on which Mr. Winch scored the Ontario logging camps were: Overcrowding, men sleeping two in a bunk, "muzzle loading" bunks, where the men have to crawl in from one end; lack of sanitary conditions for washing and drying clothing, camp kitchen staff sleeping in the dining room; toilets not properly arranged and too close to the bunk houses, and not properly disinfected; blankets not being washed, etc., etc.

"If Mr. Winch takes the trouble to go far enough into the bush camps he will find that the conditions will suit him," said Mr. P. C. Walker, of the Shepard and Morse Lumber Company. "As far as this company is personally concerned our camps are laid out in the fall, and after the layout has been decided upon a doctor is sent up to inspect them. He is not a camp doctor, but is a general practitioner, who looks after the water supply and sanitary conditions. Every month of its operation, a physician visits the camp. At the end of the season the men come away from the camp looking and

feeling healthy, so I do not see where their health is being hurt by going into the camps in the winter," said Mr. Walker.

Mr. John W. Black, in charge of the bush operations for John R. Booth, stated to the "Canada Lumberman" that the charges made by Mr. Winch were untrue. He mentioned that officers of the Provincial Board of Health frequently visited the camps of John R. Booth and if they had found conditions unsatisfactory or not in compliance with the regulations that he had never heard of it.

Other lumbermen generally denied the allegations of Mr. Winch and maintained that the Provincial health authorities were doing their duty and that the regulations were being observed.

All Europe Admires Canada's Timber

Sir Lomer Gouin, Prime Minister of the Province of Quebec, recently returned from a trip to Europe. The Premier said that what was causing the greatest interest in Europe was the wealth of the Canadian forests, and added that several syndicates with large capital, both in France and England, were coming to Quebec Province to secure forest lands.

He said that he expected to see a large influx of technical explorers come out to this province in the near future to look into its mineral resources and later encourage immigration from France, Belgium and England.

Big Sale of Island Timber Limits

The sale was completed recently of the timber limits of the North Pacific Lumber Company in Sayward district on Vancouver Island. They contain about 250,000,000 feet of uncut timber and are sold to the Lamb Logging Company of Vancouver. Negotiations were carried on by Alexander MacLaren of Buckingham, Quebec, who represented the owners of the property. They also own several other limits and mills in British Columbia.

It is understood that the price of \$550,000 was paid for the timber by the purchasers who are Lamb Brothers, J. A. Smith and A. J. Anderson, all of Vancouver.

It is the intention of the purchasers to immediately begin operations on the limits which are about forty miles north of Campbell River.

The Vancouver Island limits of the MacLaren interests are considered to be some of the finest under their control. The Lamb people look upon their purchase as one of the best logging attractions on the Coast.

Rapid Expansion of Fraser Companies

The announcement was made recently of the purchase and subsequent sale by the Royal Securities Corporation of an issue of \$450,000 six per cent. first mortgage bonds of Fraser Companies, Limited, of Edmundston, N. B.

It is understood that the new financing was for the purpose of enabling the New Brunswick lumber and pulp and paper company to purchase the Dominion Pulp and Paper Mills at Chatham, N. B., the acquisition of which will add 15,000 tons per annum of easy bleached sulphite pulp to the Fraser Companies' present 35,000 tons output.

It is stated that the new addition to the Fraser Companies' plants is part of the extensive development programme indicated by the recent introduction to the New Brunswick Legislature of a bill involving reorganization on a large scale of the Fraser Companies.

The present Fraser output is already extensive enough to place it well up in the list of large Canadian lumber and pulp and paper producers.

The lumber areas owned by Fraser Companies aggregate 1661 square miles and contain 1,760,000,000 ft. b.m. of spruce and cedar logs, and 4,650,000 cords of pulpwood; in addition 900 square miles of privately owned lands are operated under lease.

The annual production is 35,000 tons of bleached sulphite pulp; 100,000,000 ft. b.m. of lumber; and 135,000,000 pcs. of shingle.

New Company Elects Its Officers

At a meeting of the Great Eastern Paper Company, Quebec, the following directors were elected:

Charles W. Mullen, president and general manager; W. M. Dobell, vice-president, late of Dobell, Beckett & Company; H. C. Foy, of H. R. Goodday & Co., lumber exporters, Quebec; A. H. Cook, K.C., Quebec; Henry Holgate, consulting engineer; Montreal; Lawrence Chamberlain, investment banker, New York; John Mullen, pulp and paper manufacturer, Bangor, Me.; Fergus Murphy, secretary, lawyer, Quebec.

The Great Eastern Paper Company is offering \$2,500,000, 8 per cent. cumulative preferred stock in the market.

How Do You Pile Lumber in Yard?

What is the Most Economical Plan from Which the Best Results Can Be Obtained

An interesting communication has been received by the "Canada Lumberman" from the Gold Medal Furniture Manufacturing Co., Limited, in regard to the most convenient and economical methods of piling lumber. The Gold Medal Co. have large factories in Toronto, Winnipeg, Montreal, and Uxbridge, Ont., and their letter, which is as follows, explains itself.

Would you be kind enough to find space in your publication for the following questions, which we hope a large number of your subscribers will answer, and which will be for the general benefit of all the woodworking and lumber industry?

In bringing log run lumber into the yard, which is the most economical, or from which plan can the best results be obtained?

1. To pile the lumber the full run of the log all together in one pile, taking for granted it is all one thickness.
2. Is it better, in unloading, to pile the lumber in separate piles, under the separate grades: No. 1 and No. 2 common, and Firsts and Seconds?
3. For a factory manufacturing phonographs and record cabinets, show-wood chairs and stuffover chairs, is it profitable to buy log run lumber?
4. Give experience in piling green oak, and how to be successful in getting it air seasoned without checking.

"The "Canada Lumberman" will be pleased to hear from a large number of its readers giving their views on the foregoing points and feels certain such a discussion will prove both timely and profitable.

Newsy Budget from the East

Reports reaching St. John are favorable regarding the drives at the headwaters and tributaries of the St. John River. Conditions are said to be good due to the rise of the water recently, which was almost equally as high as during the spring freshet. The drift drive is due here in a day or two according to a recent report received by the St. John Log Driving Company.

At the present time there is at least half a million feet of logs collected in Marble Cove. These broke away from the Fredericton booms during the freshet and were picked up along the river and in Indian town harbor.

Fredericton is to have a new sawmill and woodworking plant according to advices received here. Operations were to have been started recently, but owing to the high water in the river covering a portion of the mill site the crew were held up. It is to be constructed on the site of the old West end saw mill, which was destroyed by fire some fifteen years ago.

The much dreaded forest fire is with us again and from reports the most serious is in King's county to the northwest of Sussex. Reports are coming in regarding these fires, the Department of Lands and Mines in Fredericton having already been notified of six. Fire fighting crews have been despatched to the various places and every effort will be made to put them out before they get beyond control.

Recent despatches say that one fire at Hammond River has been extinguished and one at Colter is under control. Crews are hard at work at the Tobique Indian Reserve fighting a fire, which broke out there. Another report says that rangers are fighting a fire at Red Rapids.

Warnings have been issued to fishermen that they are liable to heavy fines if they neglect to extinguish fires while on holiday excursions.

Big Eastern Company is Expanding

The Great Eastern Paper Co. has been granted a charter, this being the new name of the Great Eastern Pulp & Paper Co. Montreal and New York capitalists are interested in the organization. A new issue of \$2,500,000 8 per cent. cumulative, preferred stock has been made. The company own 460 square miles or approximately 300,000 acres of timber limits in Gaspé County.

The present plant of the company comprises a barking mill, a sawmill with a capacity of 10,000,000 ft. b.m. a year, a groundwood pulp plant, with a capacity of 20,000 tons a year, and a waterpower development plant with 5,000 horsepower unit installed, with a total capacity of 27,000 horsepower. The company also own a railway of several miles as well as rolling stocks, docks, lighters, etc.

It is the intention of the company to round out their activities by the erection of a newsprint mill, which will be linked up with the present operations, and thus material will be handled from its raw state to the finished product.

The Sawing of Dry Jack Pine

A northern Ontario sawmill operator, who, during the past winter cut a number of burned jack pine trees, which are often left in the bush, says he is not over the experiment as yet and that the cost of logging operations is too great in the north at present to get out low-grade timber. He adds: "We have not sold our cut as yet, neither have we started our mill and we do not know just exactly what kind of lumber we will get from this dry jack pine. It, certainly, will not sell for a high-class product and neither will it bring a high price but we will have more to tell you about it a little later on as soon as we are through cutting."

New Lumber Commissioner for the East

Loren L. Brown, who will soon come to Toronto to take up the duties of Lumber Commissioner for British Columbia, succeeding William Robertson, who is returning to Victoria after filling the position for a few months in order to resume his regular work in the Forest Branch, Department of Lands, comes highly commended for the new post. Mr. Brown has an intimate technical knowledge of various woods re-inforced by engineering training and ability. Mr. Brown was born in Portland, Oregon, and educated in the University of Idaho receiving the degrees of Bachelor of Science and is a civil engineer. From 1911-14 he was engaged in superintending the construction of frame and concrete buildings in British Columbia leaving there to take the position of computing engineer for timber tests in the Forest Products Laboratories of Canada in Montreal.

Mr. Brown enlisted as a private in Montreal in May, 1915, and reached France in September of that year when he transferred to

Wm. Robertson, Victoria, B.C.
Acting B. C. Lumber Commissioner in East,
who is returning to the Coast

the Canadian Engineers. He won his commission on the field in May, 1916, and in June of the following year was given a Military Cross for specially meritorious work with the First Canadian Tunnelling Company. He was wounded and gassed in June, 1918, and had to return to Canada. After recovering from the effects of the gas he joined the Soldiers' Civil Re-establishment staff in Victoria for a short time until he was engaged by the Imperial Ministry of Munitions as technical assistant to the District Inspector of Aeronautical Supplies Vancouver. In this position he rendered valuable service in the inspection of aeroplane spruce. The necessity for a laboratory in which tests could be made of wood doubtful quality for aeroplanes and of substitutes for Sitka spruce led to the establishment of a branch of the Forest Products Laboratories in Vancouver through the co-operation of the Dominion Forestry Branch, Imperial Ministry of Munitions and the University of British Columbia. Mr. Brown was put in charge of this laboratory and though the cessation of the war necessitated the withdrawal of Ministry of Munitions the Forestry Branch has continued to operate the laboratory and Mr. Brown has carried on a series of investigations as to the properties of the British Columbia woods which will fill a long-felt need.

Unfortunately the laboratory did not receive the support it should have from the Dominion Government, the salaries offered for the operators not being sufficient to hold the personnel and as a result the institution has been short-handed for some time.

The lumbermen of the Coast are much interested in having the institution maintained and enlarged.

Mr. Meyer in Canada on Business Trip

British Visitor is Not Inclined to be Optimistic Regarding General Lumber Outlook

Montague L. Meyer, London, Eng.

Mr. Montague L. Meyer, director of the Imported Timber Section of the Board of Trade, England, is on a visit to Canada, in connection with the Government purchase of Canadian lumber, which has now all been disposed of. He arrived in Montreal, via New York, on May 20, and left the following day for Vancouver, in order to close up the Government business there. He is accompanied by Mrs. Meyer. His connection with the Government will cease on his return to England.

Mr. Meyer is pessimistic as to the general outlook for lumber. In an interview with the Montreal representative of the "Canada Lumberman," he discussed conditions in the Old Country, pointing out that his views were based on the impar-

tial consideration of those conditions. He is not interested in lumber, in England, as a buyer or seller. He stated that during the end of last year and the beginning of this year lumber merchants enjoyed a period of great prosperity, but lately the market had slackened—he referred to spruce particularly. Pine was a much firmer market. The banks in Great Britain were withdrawing credits, with a view of stabilizing conditions, and for this and other reasons he was of opinion that there would be a substantial drop in lumber prices within the next six months.

There were ample stocks in Great Britain to meet all requirements, even for the tens of thousands of houses which were admittedly very badly needed. The cost of construction was so high that private enterprise was shy of investing money in houses, and it was impossible for workmen to build at a cost which would give an economic rent.

The Scandinavian countries were sending a large amount of lumber into the Old Country; Poland too was exporting and Lithuania was sending fair amounts of lumber. While Russia was just now out of the market, it would not be long before she resumed her lumber trade.

The entire position was therefore, in Mr. Meyer's opinion, favorable to a decline in values—values which had gone to an unprecedented height, and were bound to come down.

While it was true that manufacturing costs had gone up, and that consequently lumber could not be sold at a profit on the old basis, yet this consideration would not have any effect if prices should begin to tumble. The manufacturers and wholesalers would be forced to sell, and this would aggravate the situation. It would not be a question of what the goods cost to produce, it would be one of what they would sell for. Workmen would have to accommodate themselves to the position, and in his opinion would have to produce more, if conditions were to get back to a more staple basis.

St. Catharines Lumberman Called by Death

Mr. Archibald Maddaugh, a well-known retail lumber merchant of St. Catharines, Ont., passed away recently in that city, following an illness of six weeks, the latter two of which he was confined to his bed. The deceased, who was 74 years of age, was born in East Flamboro. He had resided in St. Catharines for the past seven years and conducted a lumber business on Vine Street in that city. He is survived by one daughter, Annie, and two sons Archie M. and William. The remains were interred in Guelph, Ont.

The Passing of Veteran Lumberman

N. S. Lusty, J. P. of Rodney, Ont., died recently. He was a well-known lumberman and the father of E. G. Lusty, lumber retailer, of Rodney. At the time of his death he was village treasurer and also Justice of the Peace, having held both positions for many years. He was also a former member of the Elgin county council and deputy reeve of Aldborough township before the village of Rodney was incorporated. Mr. Lusty was born in Oakville and when a youth worked for his uncle, Robert Coates, in a sawmill, where he remained for a couple of years; then he and two brothers started for

Rondeau. After spending some time there, he moved to Aldborough township where he decided to start a sawmill and one was erected where the old village now stands. From that date until he was seventy years of age Mr. Lusty conducted this mill and was one of the most progressive lumbermen in Southwestern Ontario. He was a member of the Masonic Order, the Oddfellows and other organizations, and leaves a widow, four daughters and two sons to mourn his death.

F. D. McIntyre Joins Silent Majority

One of the best known and most popular lumbermen of British Columbia passed away in the person of Frederick D. McIntyre, aged 51 years.

Mr. McIntyre came to British Columbia when a youth and engaged with his father in the lumbering business, which he successfully followed for more than thirty years. He succeeded his father as head of the various timber interests in which they were engaged and soon won for himself through his sincerity and integrity a high reputation as a keen business man and one who was absolutely reliable.

He operated camps at Genoa Bay, Vancouver Island, Wulfseshon Bay (now Lang Bay) and Clayton, B. C. He was managing a mill at the latter place at the time of his death. At one time he was associated with the late Joseph Tate in a mill at Rosedale.

William Grier Expires in Montreal

Mr. William Grier, who died in Montreal, on May 17th, aged 79, from pneumonia, was the last of four brothers who were for many years identified with the lumber trade, and all of whom achieved success in that industry. One brother was Mr. G. A. Grier, founder of the existing firm of G. A. Grier & Sons. The late Mr. William Grier was born in Ottawa in 1842, and about 35 years ago removed to Montreal, where he engaged in the lumber business with the firm of J. and B. Grier, his brothers, a firm which continued for many years. Later, on the death of his nephew, the late J. W. Grier, took over the latter's insurance business, which he conducted with success during the past twelve years.

"The Way the Government Does Things"

The State is a great waster of money, says an advertiser in a recent edition of a London, Eng., journal. The other day a ship in St. Katharine's dock, London, was loaded and unloaded seven times, because of contradictory orders from various Government departments. During the war we have had proof positive that Government control means waste. There are 15,000,000 people in Great Britain who have personal experience of "the way the Government does things." Every soldier's wife who ever carried a ring-book; every soldier who has ever had a mix-up in his pay account; every officer who has ever found himself entangled in "official correspondence," every employer of labor, whether he was nationally controlled or otherwise, knows what "Nationalization" means. It means delay, delay, delay. It means waste of time and money and brains. It means fighting a way through a palanx of officials before reaching the "right man." It means nobody is responsible for anything.

NATIONALIZATION

.....The Consumer Pays

The disciples of the German socialist, Karl Marx, are trying to nationalize the coal mines. They want to take the control of coal-getting from the hands of the coal owners (the investing British public) and place them in the hands of a committee composed of miners and government officials. Can you imagine what price coal will be when the miners (who take in wages 14 cwt. out of every ton of coal raised) and the government get together? You know "the way the government does things." You would have to buy the mines and then pay more for your coal—the consumer pays. Every article in common use would rise in price with the rise in the cost of coal—the consumer pays. Dear coal means dear everything.

NATIONALIZATION

.....The Consumer Pays

Oriental Still Employed in Woods

Toward the end of March the B. C. provincial forestry department notified the shingle and logging interests of the province that after May 1st a regulation of the department prohibiting the employment of Orientals in their operations in the woods, would be enforced. About 400 of these laborers are engaged in cutting shingle bolts and around 150 are logging.

It was learned that due to the difficulty in securing adequate white help for the woods the employers are taken no action and the Orientals are still working.

Cost of Construction is Steadily Increasing

Building Materials are High While Labor is Heavy Item of Expenditure—Review of Conditions Present and Prospective—Replacement Values

"There are many thrifty people who would like to know when they may safely proceed with cherished building plans, either for much needed homes or for necessary commercial space. The rent-payer is harassed with the query as to when he may expect relief from rent increases; the landlord is interested in how long he may expect the present heyday to long leases and liberal rentals to continue, says Allen E. Beals, in the "Annalist."

"In the matter of building material prices costs of production of basic commodities are increasing. There is an increasing shortage of common labor. Freight rates are almost sure to be increased. Cotton bags, barrels and other containers are being constantly pushed to higher price levels. Supply is already far below the potential requirements of the country's present building program, and manufacturers are at a loss to know how to gauge the actual demand for basic building commodities.

"There are almost no lumber schooners plying the Atlantic seaboard as in former days. These boats have been chartered since the war days for other duties. Railroads are already congested. Road work alone is almost sufficient to take care of the cement plant outputs. In addition to this the railroads are beginning to come into the market for this and other heavy construction commodities. The structural steel shops of the country have their plant capacities 95 per cent. contracted for, even before the building season is fairly under way. Common brick producers in the eastern section of the country are scouring the South for labor to run their plants this summer, and even the lure of greatly increased wages over former years has not been sufficient to insure sufficient man power. Nails are being doled out like sugar in war days, and there is a great and increasing scarcity of sheet metal of all kinds. Glass is practically out of the market. So is wood lath. Canada is unable to ship plaster rock fast enough to meet America's demands, and some gypsum mills have been forced to close down because they cannot get cars in sufficient quantity to move the finished products they have in their crammed store-houses.

In the skilled labor-market wage agreements that have been signed are likely to undergo revision upward under the "snowballing" process. Certain labor unions are insisting upon a basic wage scale of \$10 per day, although the employers have already arranged for a stabilized wage base of \$8 a day for all artisans based upon the cost of living indices obtaining as of Jan. 1. It is admitted in some circles that if the \$10 wage rate is accorded the contending labor union members the other trades will insist upon a further readjustment, and the trades now in conference for the advance will, in turn, insist upon a \$12 day. This condition may be expected to recur just so long as the cost of living increases, and the cost of living is not likely to drop until rents are lowered, which, of course, cannot come to pass until more houses are built."

Cannot Meet Demand

"As for contractors, men are refusing to estimate on new construction work, first, because they are not sure of building material supply; second, because they refuse to render estimates at present-day wage rates only to have them advanced possibly as soon as building gets fairly under way; third, because almost 70 per cent. of the work upon which estimates are requested never proceeds to actual construction, and it costs from \$100 to \$500 to estimate each projected building enterprise.

"The sub-contractors, when they go into the market for guarantees of supply and shipment on schedule, find a growing unwillingness on the part of building material and equipment manufacturers to tie themselves down to any specified performance over a length of time sufficient to insure the completion of the job at present costs. Those who have stocks of material are apparently content to wait for later price developments, especially since there is no telling where replenishment of stocks is to come from when the present supply is exhausted.

"The foregoing represent the retardant factors in the present building construction market almost everywhere. There are stimulating factors, however, that give the prospective building investor hope.

"In the first place, there is the element of demand. The potential building construction program of the country to-day is probably in excess of \$4,500,000,000. The best previous national construction record stood at \$1,480,000,000. The greatest volume of building ma-

terials of all kinds that the country has even been able to turn out in a single year totaled in value \$1,700,000,000. That total was developed when the plans were able to operate at 85 per cent. of capacity. It does not seem probable that the building material plants of America will be able this year to produce more than 50 per cent. of this total. It would appear, therefore, that the present demand cannot be met this year, nor for several years to come.

"Demand has always stimulated supply. Public attention has probably never been so closely focused upon the building industry as at the present time. The immediate necessity for relieving the national space famine which is menacing the health and comfort of families, and is retarding the development of business of all kinds, is pressing for attention everywhere. Such a demand must be met. Public sentiment is rapidly reaching a point where internal labor union differences, hostility between the worker and his employer, the jumping cost of containers for building commodities and inadequate shipping facilities, cannot much longer be misinterpreted."

Supply Will Not Descend

"Competent judges of the present building dilemma have felt and have repeatedly emphasized their belief, that there can be no progress in the building construction enigma unless there is a com-

Miniature house recently seen at Builders' Show

plete realization on the part of architects, dealers, builders, building material manufacturers, owners, loaning interests and transportation companies that the costs of production have affected the scale of prices, and that the law of supply and demand has practically been suspended by the manufacturer in favor of the builder. If the latter does not take advantage of the current quotations he is chiefly to blame if further delay occurs. Inactivity will tend to decrease production, and thus indefinitely keep prices at a level even above those now existing. It is all very well for theorists, philanthropists, legislators and publicists to hope or wish for decreased price scales, but the only method by which these can be assured is by encouraging production to the limit, and that necessarily involves prompt resumption even under the present scales. Labor has been demanding, and doubtless will continue to demand, the highest wage that can be enforced, and the best method of meeting the conflicting purposes of labor for the present is to encourage its prompt and active engagement in production.

"Many stalwart minds in the building industry and the financial world concede the probability of a frantic scramble for available building material supply this summer. There is almost a unanimous objection to any suggestion in favor of Federal interference, and at this time it does not seem to be the safest way out of the difficulty in the light of wartime experience with Federal control. The situation may provide its own solution.

"There is a startling similarity of opinion among building ma-

material manufacturers to the effect that the real peak of building material prices will not be reached until about the spring of 1921. From that period a price plateau is due to develop at which quotations may be expected to rule with almost unbroken fidelity for an indefinite time.

Save Trees by Waste Paper Reclamation

Every ton of waste paper that can be substituted in paper manufacture will save eight trees of mature growth required to produce a ton of wood pulp and we are sending annually to the dump 150,000 tons of waste paper representing substituted power for at least 1,200,000 trees of mature growth, says the Waste Reclamation Service of the U. S. Department of Commerce, in urging a more extensive use of waste paper as raw material in paper manufacture.

The United States with its 30,000 or more newspapers is said to publish nearly one-half the total number of newspapers in the world, the aggregate circulation for the United States and Canada being given as 34,363,000 for dailies and 17,233,00 for Sunday papers in 1919. These figures indicate the enormous quantity of newsprint paper required by the daily press, exclusive of that used in other branches of the publishing business.

In urging the salvage of waste paper, the Waste Reclamation Service says that the largest tonnage of waste paper consists of any and every sort and scrap of paper such as old newspapers and its chief use is for paper boxes, roofing and building boards, paper shipping containers and wrapping paper. More than 2,000,000 tons of ordinary waste papers are used for boxes and shipping containers alone, the use of waste papers for this use preventing the consumption of over 1,000,000,000 feet of lumber annually.

Largest Saws in the World Installed

When it was suggested that Henry Disston & Sons of Philadelphia make some circular saws 108 inches in diameter to be used in cutting shingle bolts people laughed and thought the idea crazy. The strain would be too great, no mandrel could hold, a saw with a surface so large could not run straight and true. But even as Marconi accomplished his idea of the wireless telegraph after the world mocked, so has the Disston firm done what seemed impossible.

Recently two circular saws, 108 inches in diameter, made in the Disston plant in Philadelphia, began their first run in the Coats Shingle Mill at Hoquiam, Washington, and they ran perfectly. There was a large gathering present. Usually a special saw is built to fit machinery. But as these saws departed from the commonplace in size, so they did in requirements. Special machinery was necessary to carry them. The power turned on, they began to run slowly, then as the speed grew the hum increased until it sounded like the noise of a swarm of bees. The serrated edge, traveling at a speed of 130 miles an hour, cut through those big Coast logs with an ease and rapidity that astonished experienced mill men. With an ordinary saw the shingle weavers frequently had to wait for bolts to accumulate, with the installation of these saws the crews in the cutting and packing departments were fairly swamped.

The day was a happy one for the shingle industry because, to quote Mr. D. W. Jenkins of Seattle, "With these saws a success, they will revolutionize shingle manufacturing. Smaller saws, of course, will cut the largest logs, but the objection to them has been that they cannot sever them completely, but do it in sections, causing them to split and thus wasting considerable timber. The larger saws cut without splitting."

Filling Big Order for Railroad Ties

British Columbia lumber mills have started cutting on the order for 5,000,000 feet of ties for the British Government's railways in the United Kingdom. The order was placed through the Lumbermen's Export Association, and is being allocated to the various mills on the same principle as the last British Government order for 70,000,000 feet of lumber was handled. Shipments will be made as soon as boats are available.

New Edition of Handy Reference Work

The third edition of Baughman's "Buyer and Seller—Cost and Computation Tables," has just been issued and is the most complete and representative in every respect. The work is designed to present in the smallest compass consistent with clarity, the largest amount of general information considered to be of most value to the average reader. The comprehensive volume is a vast treasury of facts with all the unimportant details omitted. This "Cost and Computation" manual covers so many lines of activity that it is impossible to refer to them in detail. It is calculated to meet all conditions and fill every requirement from the beginning to the end in business, saving much time and research on various important prob-

lems. The salient items of information usually found in large and expensive works are presented in condensed form. The book is published by H. R. A. Baughman, Indianapolis, Ind., whose slogan is "The efficient books to buy by, to sell by, to know the world by."

Priceless Possessions That Cost Nothing

Justice Walter Lloyd Smith, who presides over the third department of the appellate division of the supreme court, brought with him to a dinner of the New York university law school alumni association what he said was "the most remarkable document that ever came into his possession," says the New York Times.

Others who read the document, the last will and testament of Charles Lounsbury, who died in the Cook county (insane) asylum at Dunning (Illinois), were not disposed to disagree with him. Here it is:

"I, Charles Lounsbury, being of sound mind and disposing memory, do hereby make and publish this, my last will and testament, in order as justly as may be, to distribute my interest in the world among succeeding men.

"That part of my interest which is known in law and recognized in the sheep-bound volumes as my property, being considerable and of no account, I make no disposal of in this, my last will.

"My right to live, being but a life estate, is not at my disposal; but, these things excepted, all else in the world I now proceed to devise and bequeath.

(Item) I give to the good fathers and mothers, in trust for their children, all good little words of praise and encouragement, and all quaint pet names and endearments, and I charge said parents to use them justly and generously, as the needs of their children may require.

(Item) "I leave to children exclusively, but only for the term of their childhood, all and every flower of the fields, and the blossoms of the woods, with the right to play among them freely according to the custom of children, warning them at the same time against thistles and thorns. And I devise to children the banks of the brooks, and the golden sands beneath the waters thereof, and the odor of the willows that dip therein, and the white clouds that float high over the giant trees. And I leave the children long, long days in which to be merry in a thousand ways; and the night; and the moon, and the train of the Milky Way to wonder at, but subject, nevertheless, to the rights hereinafter given to lovers.

(Item) "I devise to boys jointly the use of the idle fields and commons where ball may be played; all pleasant waters where one may swim; all snow-clad hills where one may coast; and all streams and ponds where one may fish or where, when grim winters come, one may skate; to have and to hold the same for the period of their boyhood. And all meadows, with the clover blossoms and the butterflies thereof; the woods and their appurtenances, the squirrels, and birds, the echoes, strange noises, and all distant places which may be visited, together with all distant places there found. And I give to said boys each his own place at the fireside at night, with all pictures that may be in the burning wood, to enjoy, without let or hindrance, and without incumbrance or care.

(Item) To lovers, I devise their imaginary world, with whatever they may need as to the stars of the sky, the red roses by the wall, the bloom of the hawthorn, the sweet strains of music, and aught else by which they may desire to figure to each other the lastingness and beauty of their love.

(Item) "To young men, jointly, I devise and bequeath all boisterous, inspiring sports of rivalry, and give to them the disdain of weakness and undaunted confidence in their own strength, though they are rude. I give them the power to make lasting friendships, and of possessing companions; and to them exclusively I give all merry songs and brave choruses to sing with lusty voices.

(Item) "And to those who are no longer children or youths or lovers, I leave memory; and I bequeath to them the volumes of the poems of Burns and Shakespeare, and of other poets—if there be others—to the end that they may live over the old days again freely and fully, without tithe or diminution.

(Item) "To our loved ones with snowy crowns, I bequeath the happiness of old age, the love and gratitude of their children, until they fall asleep!"

Building Milling in Transit Planing Mill

There are almost as many different ways of laying out planing mills as there are planing mills, and the same is true of locating machinery in these mills. Those who plan to build a planing mill to operate at the least expense, would do well to give careful consideration to modern labor-saving devices and the location of the different machines, says R. C. Leibe in the "American Lumberman."

The accompanying illustration shows a plan for a milling in transit planing mill which will operate cheaply and with less labor than is usually employed. A railroad track on each side of the planing mill should be secured and the machinery should be placed at

small machines, while "C" shows the filing room and the location of the saw sharpening machines and extra band saws. A filing room should be light and in this plan windows are indicated by the double lines. The machine is indicated, while at "D" live rolls lead to the sidetrack. In this plan one man feeds the machine and one man puts the lumber in the empty car on the siding at "D." No one is required to tail at the rear of the matcher. Thus, as one man can do the unloading only three men are required to unload the stock, operate the machine and load the matched material. Should it be necessary to reload the dressed stock in the same car in which it arrived at the mill live rolls at "E" are installed so that by reversing them, the man at "D" can easily shift the material on these rolls, and send it back to the car again. As the matcher runs somewhat slowly the man who is doing the unloading can load the dressed stock very easily, especially if the rough stack has been unloaded from one end before starting the run.

The molding machine is next in line. Back of the molder the live rolls at "F" lead to the sidetracks so that the molding can be loaded direct into the car; or, if this must be returned to the car from which the rough lumber came, the molding can be transferred to the reversible live rolls at "E" and sent back to the cars it started from.

The machine, or belting and supply room is located as shown in the sketch, leaving some extra space which can be used for small machines or for any other purpose desired. The band resaw machine is located so that the band mill can project into the clear space in front of the belting room. By putting the belting room between the molding machine and the resaw, space is given for the spotting of freight cars on the sidetrack so that they are not so close together as they would be if all the machines were in an unbroken line. The live rolls at "G" convey the lumber from the car to the resaw and then from the resaw into the waiting car. If it is desired to put the resaw stock back in the same car in which it came this can be accomplished by means of the reverse live rolls "H." The method of transferring the lumber is indicated by the arrows.

The surfacing machine is located next to the resaw. Lumber for this machine passes over the live rolls "I" into the machine and then goes over the live rolls to the waiting freight car on the opposite sidetrack. If it is desired for any reason to reverse the line of travel the lumber is transferred to the rolls at "H" and goes directly to the freight car from which it was taken, or if desired, may be run to the resaw. Frequently stock after being resawn is to be surfaced one or two sides and this may be done by transferring the lumber over the live rolls, as indicated by the arrows. Last in line is the siding machine. Lumber may be transferred from the live rolls back of the surfacer by chains "J" to the siding machine and after being worked may be passed on to the car over the chains at "K."

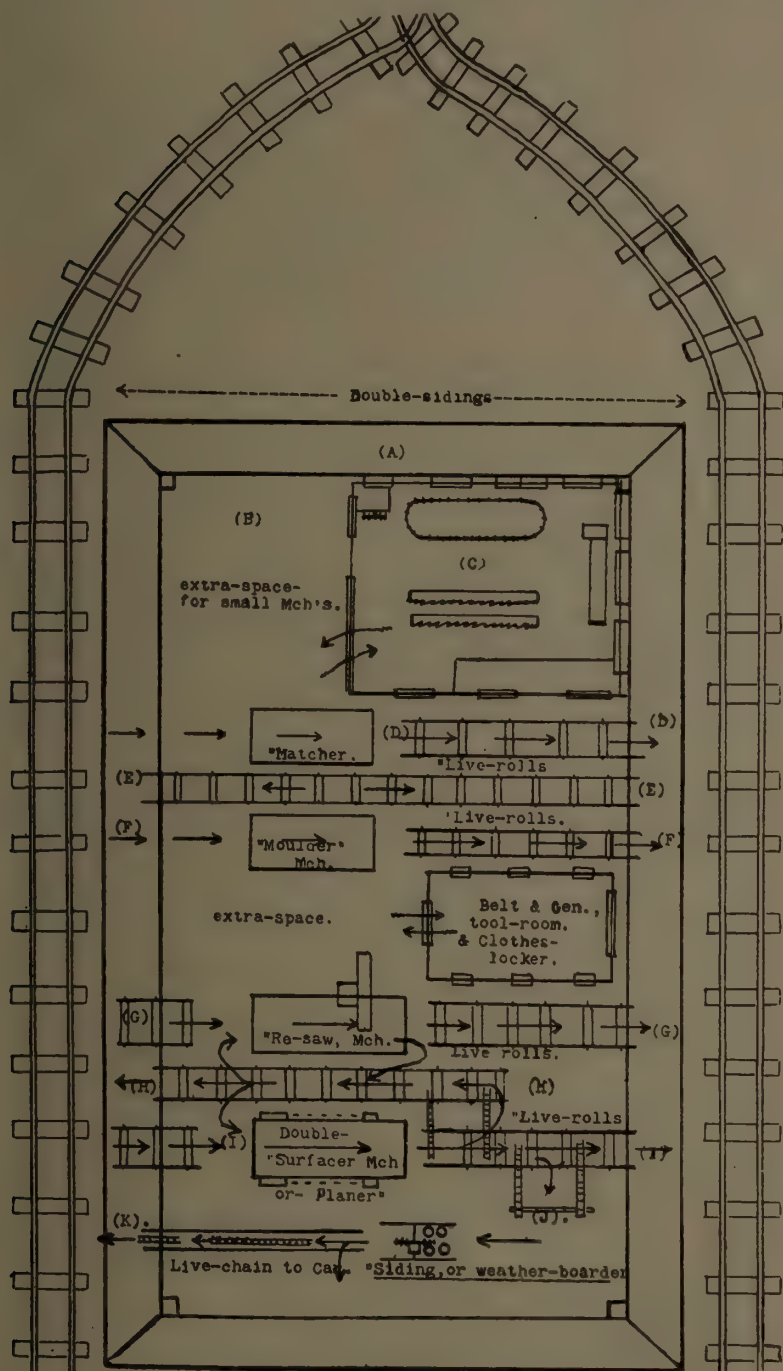

When lumber which is resawn is to be reloaded in the car in which it arrived four men are required to do the work, as the lumber is generally heavy and, consequently, somewhat harder to handle. In the case of the matcher or molder, however, which works only narrow and light lumber, the same man unloads the car and also reloads it. If the lumber is to be resawn only one man unloads, another reloads the return lumber, a third feeds the machine, while a fourth tails the resaw and puts the lumber on the returning live roll.

It is always best to have as many empty cars as possible on the siding opposite the one on which are spotted the cars of lumber to be dressed so the lumber may be passed through the machine into an empty car.

Mills at Bathurst Are Now Cutting

The Bathurst Lumber Co., Bathurst, N. B., have started running both their sawmills for the coming season. The logs were rather late in coming down this spring, but a sufficient accumulation is now on hand to insure steady operation. Angus McLean, vice-president and general manager of the company, reports that labor is none too plentiful, but he is of the opinion that the situation will be much better on the whole than it was last year.

Mr. McLean says that the market for sulphite and kraft pulp is pretty active at the present time and particularly so during the last two months. The pulpwood situation has been strenuous in the East for some time but the pulp and paper division of the Bathurst Lumber Co. managed to keep going as the Miramichi Lumber Co. came to their rescue and helped them out with a large supply of pulpwood to tide them over a crisis. This was owing to the fact that one large contractor, who had a contract with the Bathurst Lumber Co. to deliver 10,000 cords of pulpwood, fell down on the job.

Erecting a milling in transit planing mill

right angles—not parallel—to the sidetracks. There are many of these milling in transit planing mills which resaw, surface, match, mold and make siding, flooring and ceiling from rough lumber, the product being put back in the same car in which it came to the mill or in another, and shipped immediately. The ideas illustrated were once put to test in a small planing mill by the writer and they doubled the capacity of this mill and, at the same time, lowered the expense of handling material.

In most planing mills the builders have failed to learn the lessons which the sawmill builders learned years ago; namely, that instead of carrying lumber about by hand live rolls and chains for conveying it should be employed to as great an extent as possible.

The accompanying diagram shows a railroad siding on each side of a planing mill. At "A," at the top, is indicated the porch shed, which runs around the entire planing mill. "B" is space reserved for

Straight Road to Profit in Lumber Business

By the Wife of a Retailer

It was about six o'clock and I heard John's steps coming up the walk. He was whistling and walking briskly. I opened the door and he jumped in full of life and enthusiasm. He grabbed me and gave me a whirl and a kiss.

"What's the matter, John?"

"Oh! Great doings Mary."

"Well, tell me. I don't want to wait."

"All right, sit down. Two days ago a carpenter came into the office with a note from Samuels and the note said to send enough flooring up to his house as soon as possible for his kitchen and summer kitchen, and to send a suitable grade."

"Do you mean Andrew Samuels, the president of the First National Bank?"

"Yes, yes, it was he. Well, I thought to myself he may not know how very greatly flooring has advanced in the last year or so, and I thought I had better call him up and let him know what the price would be, and so I did. The party who got the message at the bank said that Mr. Samuels was at an important conference, and I told him that I had a hurry up order to send some flooring up to his house and wanted to tell him about the price. He said, 'I will try and see him,' and in a minute or so he was back on the phone and said Mr. Samuels had given him word that he could not stop and to send it up as he was in a hurry."

"One room was 20 x 18 and one 20 x 16, so I sent up 840 ft. of 1 x 4 lumber 1 Common Yellow Pine flooring, and that night I mailed him a bill which amounted to \$107.10, making the price on the flooring at \$127.50 per thousand."

"All right, go on John."

"Right after lunch today Samuels turned up in his car, got out, came into the office, and said, 'John, it looks as though you made a mistake on that bill of flooring. The price you name is nearly three times what I have paid for similar flooring before, and I wish you would look it over.'"

Was Not Overcharging Him

"I said, 'Andrew, I will tell you. I called you up yesterday before sending that out so as to let you know about the price, and you were very busy and sent word to fire it along, and so I did. If you will just step in here a minute I will show you that I am not overcharging.'"

"Well Andrew said he would take the time to look into the matter, so we went into the office and I showed him where I had placed an order about two weeks ago for a car of this same kind of flooring at a price of \$95 f.o.b. cars my switch. Immediately Andrew spoke up and said, 'Well did the flooring that you sent me cost \$95?' I told him that it had not, that the flooring I had sent to his house had cost \$60, but that I was running my business on a more systematic line than I ever had before and that I was basing selling prices on market and replacement values."

"Then he asked where the \$32.50 per thousand additional came in, so I took him over to my books that for the last seven months I have been running in such a manner that I would know my costs. I got out my ledger and showed him a little group of accounts which amounted to so much money up to July 31st, and I showed him a record of the lumber that had come into my yard and had been put into pile or shed during the first seven months of the year. By dividing this footage into the amount of expenses it made practically \$6.00 per thousand."

"Then I showed him another group of accounts that cover my lumber delivery and I also showed him a record of the total number of feet that I had delivered during this same period, and by dividing one into the other it gave me about \$3.00 per thousand."

"I then showed him another group of accounts which covered expenses for administration and selling in my business, and that the part allotted to lumber was so many thousand dollars. By taking my cost of lumber sold for the first seven months and adding to it the cost of getting into shed and pile and the cost of delivering, and then dividing it into the cost of administering and selling, it made 11 per cent."

"I then said, 'Mr. Samuels, I take my replacement cost on this flooring and add \$6.00 and \$3.00, making \$104.00, then to this I add 11 per cent. to absorb my administration and selling expense, and have \$115.44. To this I add a profit of 10 per cent., or \$11.54, which

makes \$126.98. I have used the price of \$127.50 as being the nearest suitable price of \$126.98.'"

Wanted to See Trial Balance

"I want to say Mary that Andrew Samuels was very much interested in these books and asked to see my Trial Balance. I took it out of the safe and showed it to him, and he looked it over with the eye of a banker who knows where to look. The first thing he spoke of was my Reserve for Depreciation, and I told him since having the new system that every month I charged into the expenses 1/12 of a fair annual depreciation and credited this account, so that I did not need to wait until the end of the year to have it in my expenses. He noticed another item on the credit side of the trial balance called Accrued Taxes, and I told him that I had estimated my taxes for the year at so much, and every month had charged 1/12 of this amount into my expenses and credited it to the accrued account, so that I would not have a bump at the end of the year from leaving it out."

"The next thing he noticed was a personal account in my name of about \$1300 and asked what that was doing on the books. I told him that I had started out this year under the new plan with the idea of paying myself a just and commensurate salary, so that my expenses would show a proper charge for executive salaries, but that as I was rather close on money I did not draw all of this every month as I would like to have done, but let the balance remain to my credit."

"He next noticed an item called Bills Payable, and he immediately asked if I had given notes to take up some of my account. This was very embarrassing because four or five months ago I had gone to Andrew Samuels and asked him to increase my line of credit, you remember Mary my telling you about how I explained to him that the increased cost of all commodities made it necessary to have more money to carry stock and also to carry accounts, and that I needed a little more credit, and you remember Mary my telling you that after quite a little talk with Samuels he refused to grant this. I recalled this to his mind and told him that it had been very difficult sledding and that I had had to miss taking the discount on a good many bills."

Yard Looking Spick and Span

"After some more talk in the office Andrew asked to look around the yard and it made me feel mighty good to think that I keep my stock in such nice shape. The alleys in the yard were clean and my planing mill was busy, and I am sure made a good impression. I also showed him my dressed lumber shed where you remember I have recently put a concrete floor which has been a fine thing in keeping my dressed stock looking bright and nice, on account of reducing the dust to a minimum."

"We returned to the office, sat down and talked over a few things, and finally Andrew arose to go, and he said to me, 'John, you certainly have given me a big eye-opener this afternoon and I believe that you are on the highroad to an earned success. I can see by your figures that you are making money, and I believe you will continue to do so. I will admit that in the past I have not thought well of your business but what I have seen this afternoon, and the way you look and the confident air that you have, which is very different from the last time I talked with you, has caused me to change my mind. In regard to this bill for the flooring I will mail you a check tonight and if you will come down to the bank tomorrow morning and tell me the amount that is necessary within reason to put you where you can discount your bills, I am inclined to think that our Discount Board will agree to increase your line of credit.'"

"Oh! John, isn't that fine?"

John jumped up from the chair and started briskly up the stairs to wash up for dinner, and I thought to myself, how that man has changed in one year.—The Lumber Co-Operator.

Do Not Pull Down the House of Another

Prosperity is the fruit of labor; property is desirable; is a positive good in the world. That some should be rich shows that others may become rich, and hence is just encouragement to industry and enterprise. Let not him who is houseless, pull down the house of another, but let him work diligently and build one for himself, thus by example assuring that his own shall be safe from violence when built.—Abraham Lincoln.

All Retail Transactions are Exempt

How New Federal Taxation Provisions Will Operate in Respect to Volume of Sales

In connection with the taxation provisions which were recently brought down by Sir Henry Drayton, Minister of Finance for Canada; clause 7 (a) in the amendment to the special War Revenue Act provides:

"7. (a) That a tax of one per cent. in addition to the present duties of excise and customs be imposed, levied and collected on sales by manufacturers, wholesalers, or on importations; that the purchaser shall be furnished with a written invoice of any sale, which invoice shall state separately the amount of such tax, when not included in the purchase price; that such tax must not be included in the manufacturer's or wholesaler's costs on which profit is calculated; and the tax shall be paid by the purchaser to the wholesaler or manufacturer and remitted to His Majesty in accordance with such regulations as may be prescribed, and such wholesaler or manufacturer shall be liable to a penalty not exceeding \$500 if such payments are not made, and in addition shall be liable to a penalty equal to double the amount of the excise duties unpaid.

"(b) That the Minister may require every manufacturer and wholesaler to take out an annual license for the purpose aforesaid, and may prescribe a fee thereof, not exceeding \$5.00, and the penalty for neglect or refusal shall be a sum not exceeding \$1,000.

There was some doubt in the foregoing whether a retailer, should he mill part of his lumber, would be regarded as a manufacturer and have to collect 1 per cent. on that portion of his stock which he "worked."

Mr. Frank Hawkins, secretary of the Canadian Lumbermen's Association, Ottawa, has sent out a notice to the members and it shows where manufacturers or wholesalers do a retail business there will be no tax of 1 per cent. This is also true of those who operate a sash and door factory. The retail lumberman is, therefore, not expected to collect the one per cent. tax from customers.

The notice from Secretary Hawkins reads: With reference to the Resolution presented by the Minister of Finance, the operations of which became effective May 19th, 1920.

After consultation with Mr. George W. Taylor, Assistant Commissioner of Customs and Assistant Deputy Minister of Inland Revenue, who will have charge of the administration of the Act, insofar as the lumber business is concerned, the following decisions will obtain.

1. Where lumber was bought prior to May 19th, 1920, and paid for on proforma invoices prior to that date the tax of 1 per cent. will not be assessed, provided ownership has not changed since that date.

2. Where lumber was bought or contracted for prior to May 19th, 1920, but not paid for or delivered the tax of 1 per cent. will have to be added to the invoice by the seller.

3. In billing at a delivered price the proper proceeding will be to show on the invoice the value of the goods figured at the delivered price, then deduct the actual amount of freight and from this deduct the cash discount, if any, and on the balance figure the 1 per cent. Government tax, which is to be added to the invoice.

4. On all goods imported there will be a tax of 1 per cent. which will be collected by the Customs Department on entry into Canada.

5. In cases where a manufacturer or wholesaler has a retail business in connection therewith and operates a retail sash and door factory, etc., any business performed by the retail department for the wholesale department will have to charge the tax of 1 per cent. to the wholesaler on the invoice. All retail transactions are exempt from the tax.

Canada Must Conserve Her Pulpwood

Canada is possessed of enormous wealth in natural resources, and these possessions are becoming of more value as similar resources in other countries diminish, says Sir William Price, of Quebec, in a recent issue of the "Financial Post."

Canada has not had a sufficient population to develop these resources to any extent and has had to be contented with permitting the shipment of her raw materials instead of handling the manufacturing and shipping the finished article.

The result of this policy has been that Canada is looked upon as a source of supply of raw materials for other countries, who have naturally benefited materially from their manufacture.

The re-adjustment of the world's trade has definitely awakened us to the value of our natural resources and also to the enormous loss to Canada that would be entailed should we continue the old policy.

Canada proved her ability as a manufacturing nation during the war, and it would be suicidal for one moment to permit the return

of her people to the position of "Hewers of wood and drawers of water."

Prior to the war, Canada's export of surplus production was insufficient to pay for her import requirements. During the period of the war, this condition was reversed.

Canada's wise policy in wholeheartedly participating in the war of "Right" against "Might" has incurred what is to her, with her small population, an enormous debt, and the question now facing us is, how are we going to pay this debt, and at the same time meet the constantly increasing expenses of the State?

Without doubt the obvious answer to this question is that we must increase the value of our production for export purposes, and this can be only economically done by increasing the value of our shipments of finished commodities; only exporting in the crude that which at this time we have no facilities for manufacturing on a sound economic basis.

Outside of that of agriculture, there is no Canadian industry which so naturally belongs to Canada, and can be developed so economically as that of the manufacture of newsprint and allied productions.

As the soil of the great wheat belts is the basis of our agricultural activities, so are the forests the basis of the paper industry.

In the past, Canada was content to export pulpwood and groundwood pulp (which is a semi-manufactured article), thus disposing of its natural resources, which are practically irreplaceable, at a small margin of profit, permitting other countries to get all manufacturing profits at the expense of Canada.

During the last few years, conditions have happily been considerably improved, as instanced by the following summary of Canadian paper exports from 1912 to the present year.

1912	...	\$3,867,119
1913	...	6,214,810
1914	...	12,675,036
1915	...	15,478,388
1916	...	20,021,270
1917	...	26,072,646
1918	...	37,742,697
10 mos. to Jan. 31, 1919	...	37,963,319

The action of the Provincial Government of Quebec in prohibiting the export of pulpwood cut upon Crown lands is on a par in its wisdom with Lloyd George's "Patent Acts Bill" of England, and I am satisfied that not only should the export of pulpwood from Crown lands be prohibited, but that the export of groundwood manufactured from pulpwood from Crown lands, should also be prohibited.

The English Timber Market Trade

The import of New Brunswick and Nova Scotia spruce deals exceeded the consumption during April, say Alfred Dobell & Co., of Liverpool, Eng. Owing to the healthy demand in the United States and Canada the position of the f.o.b. market is strong. The consumption of Douglas fir slightly exceed the import and stocks are sufficient. On Scandinavian deals and boards prices remain firm with a steady demand.

The import of pitch pine was light, and consisted mainly of lumber. Stocks are sufficient. Spot prices were easier, due to consignment shipments and quotations for forward shipment were firm. There was no sign of weakness in f.o.b. values. The position of the hardwood market has not altered. Buyers are disinclined to purchase for stock at existing prices as their present holdings are moving but slowly into consumption. Imports of late of East India teak have been heavy, principally against old contracts made at prices considerably lower than those ruling at present for forward shipment. Stocks are ample for some time, and forward sales are difficult to make.

The auction sales of mahogany in April were well attended. Competition was keen for sound logs of large size in Benin, Lagos and African wood. Medium and small sized logs and hose in faulty condition also sold readily, but for these descriptions prices were on a lower level than the previous sale. Sapeli mahogany was not in demand, and the greater part of the quantity offered was withdrawn. African walnut met with little interest from buyers, and sellers' ideas of value were beyond what the market was prepared to pay. Cuban cedar was firmly held for high limits, and was withdrawn in consequence.

The American Newspaper Publishers Association recently pledged its members not to consume any more newsprint from May 1 to December 31 next than they did in the corresponding period last year. Members will make monthly reports of newsprint consumption to a committee of the association.

How Retail Lumberman May Buy Best Truck

Important Features Which Should be Considered—Economic and Service Points That Should be Kept in View—Advantage of Motor Delivery

Every up-to-date lumber dealer knows the value and advantage of truck delivery over the antiquated horse-drawn vehicles. Therefore it will be needless to dwell on that particular point.

However, probably every lumber dealer does not know how to select the right truck, both from an economic and service standpoint, and the object of this article is to set forth some of the important features which every truck purchaser should seek when buying a motor truck.

Almost any blacksmith, in a remarkably short time could build a truck to your direct specifications. From any one of several concerns he could buy a motor of proven worth. From another he could purchase a strong, sturdy frame. He would have a wide selection of reliable, wear-resisting bearings. He could buy well-known axles, gears, wheels, springs, radiator, and the hundreds of parts that go into a completed truck.

Every unit in that truck would be as good as could be obtained. The truck would possibly be as good as could be built by experts who had to follow your instructions to the letter. The blacksmith would only assemble the various units.

But would that truck be a good investment? Would it meet the thousand and one requirements of a good commercial car?

Probably not. It would lack one essential thing. It would lack the experienced designer, who by years of study and test had overcome the stumbling blocks that impede the way of the inexperienced.

Only One Test of Merit

Because each part is good, it does not necessarily follow that the whole is beyond improvement. Each stone in a mosaic may be perfect—but the mosaic itself will not be good if put together by an inexperienced artist.

So it is with motor trucks. Each part may be the best that can be bought—but the completed truck may not give satisfaction.

The only test of truck worth is performance. Performance inevitably reflects the ability of the designer—ability gained only through experience and constant determination to reach perfection.

Bear this in mind when you come to select a truck that will give long, uninterrupted service—at a moderate initial outlay and reasonable operating and maintenance costs.

First of all, at any price, you will want a truck that is going to be a good investment. To be a good investment, it must operate at a profit. This means that its service must be uninterrupted. It must stay out of the shop. It must not be held up for roadside repairs. It must give constant service in the hands of the average operator. It must not be wasteful of tires and gasoline. It must have long life.

But a truck might be all of these things and yet, if the first cost is excessive, prove a poor investment.

Other things being equal, you would make a poor investment if you paid a high price for a truck having no advantages over one which could be bought at a material saving.

Bear that in mind when you finally decide.

Pick the Dealer

You would likewise be using poor judgment to buy a truck from a dealer who was not progressive and prosperous. His very prosperity is, in a measure, a guarantee of the worth of the article he sells. Only a prosperous dealer can afford to carry an investment that assures him of a full line of spare parts. Only from such a dealer can you always be sure of efficient service.

Men of that type realize the importance of "service." Their interest in the truck you buy is not ended when they receive your check. They know that their future prosperity depends upon the satisfaction given their customers. It is to their interest to see that you receive continuous economical service from your truck.

Naturally, it is to your interest to deal with men of that type. Your business experience has taught you the futility and poor policy of attempting to deal with unprogressive, unprosperous men. They will "guarantee" almost anything you ask. But what is the value of their "guarantee" with nothing to back it up?

They can't afford to keep a full line of parts. If you have an accident, it will take days, maybe weeks or months, for them to replace the damaged parts. If the truck fails to give satisfactory ser-

vice, they are not in a position to make it good. A guarantee is never stronger than the man who gives it.

These things have been learned in almost every business. Don't forget them when you buy a motor truck.

Study the Builders

Don't buy a truck merely because it has an excellent motor, good axles, fine bearings. You may feel sure that you get them in any truck which, for more than a brief period, has proven satisfactory.

Buy rather on the basis of past history. Demand a truck that has come untarnished through the trying test of hard, continuous usage under all conditions. Buy a truck made by men whose past success may be taken as an indication of hopes for the future. Makers of that caliber can never afford to stake their reputation and their business hopes on a mediocre truck. They can never afford to sacrifice quality for immediate profits.

A truck may possibly be good even if built by a new concern, provided that concern has been wise in its choice of designers and engineers. But there is a risk that its designers are inexperienced or have failed to profit by their experience. When you buy a truck, your investment is too large to gamble with. You cannot afford to take a chance. It would be a poor article of unknown value.

Minor Details Important

Take, for instance, a seemingly unimportant detail like the location of a cross member on the frame. The frame—merely as a frame—may be the best that can be built. Unless that cross member is correctly placed in its relation to other parts, however, that frame will soon develop weakness. Shorten or lengthen the springs only half an inch, and a satisfactory frame may give trouble. Possibly the cross member would need to be moved only a small fraction of an inch to work in harmony with those springs.

But unless that small change is made the truck is doomed to a short life of usefulness.

You should feel confident that in the truck you buy each screw, each nut and bolt in the truck.

That is another thing you should learn about any truck you consider. Has it proved its ability to withstand the service you will require of it?

The average truck utilizes only a small part of the power developed by its motor. Even that small part is greatly reduced when the truck is starting, pulling on a grade or running less than eight or ten miles an hour.

Wasted power means excessive operating costs; short life. An advanced method of power application actually delivers more than 90 per cent. to the rear wheels—where it drives the truck and is not consumed in overcoming internal friction and resistance.

Simplicity Important

The performance of most trucks depends to a large extent upon the care and attention of the operator—and many drivers are negligent and careless. You should get a truck simple in design, with no unnecessary parts to get out of order. It should be as nearly fool-proof as a piece of machinery can be made.

Every hour spent in the shop or delayed for roadside repairs is a dead loss to the owner. The truck that shows a profit is the one that gives uninterrupted service. It must stay always in service, without needless delays because the driver thinks "she's not running just right and has to be tuned up!" A truck that must be frequently "tuned up" is too delicate to meet the requirements of those who must have dependable transportation.

Simplified design is a factor in reducing gasoline consumption and running costs. It reduces the necessity for repairs, as there are fewer parts; and inexpert mechanics delight to tinker with adjustments—frequently necessitating a costly interruption in service. Your truck should be so designed that adjustments that invite tinkering and tampering are done away with.

A great many parts could well be eliminated from the average truck. It should be exceedingly simple, practically fool-proof.

The average driver fails to give proper attention to the many grease cups and places to oil found on most trucks. And unnecessary places to lubricate mean unnecessary time—and expense—spent in oiling and greasing the truck. Neglected lubrication will soon send any piece of machinery to the junk pile. It has probably been

the greatest factor in truck destruction. The truck you buy should have the fewest possible grease cups and spaces to oil. Wherever possible automatic lubrication should protect against carelessness and neglect.

The Test of Popularity

You will find some of these features in almost every truck. In some trucks you will find many of them. But you may feel sure that very few builders can put out a commercial car of such high quality at a price which would prove a good investment value for the average user.

You should insist upon a truck which is proving its value in a large number of lines of business. If it is a good truck, its value should be recognized throughout the country. It should be giving daily service in the metropolis and on the farm. Its popularity should not be localized. It should be in service in every principal foreign country.

When you select a truck insist that it embody all of these things—at a moderate first cost. To be good, a truck need not necessarily be expensive. Advanced design, with good factory methods and quantity production, makes it possible to manufacture such a truck to sell at even less than the average price.—Burt R. Barr in the "Lumber Co-Operator."

Good Use of Tractors Hauling Pulpwood

The A. Sherman Lumber Co., of Potsdam, N. Y., say that they are now using trucks to transport their supplies to the logging woods, and the route is over good state and country roads. They began last winter to employ tractors hauling logs and pulpwood and were so pleased with the results that they are planning in the future to do all their hauling with tractors. This refers to hauls of one or two trips per day. In the matter of short hauls, the firm do not think that tractors would be a paying investment.

The A. Sherman Lumber Co. have been using a caterpillar tractor which carries a one-sled trailer behind it and will take from two to three additional sledloads of logs. On a recent spring trip over an ice-road, from thirty to forty cords of peeled pulpwood were hauled.

An officer of the company lately said: "We were not fully prepared for tractor hauling last winter but our experience indicates that, after making proper preparations on our roads, we will be able

Caterpillar tractor hauling approximately thirty cords of wood

to make one of these caterpillar tractors displace six or eight teams of horses. Our experience leads us to believe that the greater value of the tractor is on the longer pulls rather than on the shorter ones. We feel quite certain that the coming winter will see us hauling approximately forty cords of pulpwood at a trip with the tractors. It was a haul of twelve miles from the double headers to the landing and we had seventy-five teams on the road, making one trip per day. The tractors should make two trips and could have done so except for conflicting with the teams. We did not get our tractors last fall until after we had begun hauling with horses, and our roads had not been prepared to the best advantage for tractor use. The average time for making the trip with the tractor was three hours going down with the load and two hours and twenty minutes returning empty. We hauled three loads at a time, approximately thirty cords of wood a trip and we would have no difficulty in adding the fourth load if we had had the extra equipment and eliminated the short curves in the road. By hauling four loads at a trip and two trips a day, the tractor would have displaced eight teams. We sent only one man with a tractor train, and the consumption of gasoline was between twenty and twenty-five gallons in ten hours' running."

Aeroplane Spruce Converted into Pulp

What on the surface would appear as almost criminal waste, and yet is a conservation measure, is taking place in the pulp-mills on the Pacific coast, says Roland D. Craig of Ottawa. Prior to the close of the war upwards of 100 million feet of the finest spruce logs for the manufacture of aeroplanes was cut in northern British Columbia, principally on Queen Charlotte islands. As the timber was not required for its original purpose, and, as the logs lying in the woods would decay and those in the water would soon be destroyed by teredoes, it was disposed of for commercial uses to the best advantage.

The limited capacity of the lumber mills in that portion of the province prevented the utilization of the greater portion of the supply of logs for lumber. The pulp-mills, however, which during the war had been producing large quantities of aeroplane lumber, purchased much the larger proportion of the logs, and will convert them into pulp. The large timber on the British Columbia coast has to be sawn before it can be used in the pulp-mills, and as several of the pulp companies also manufacture lumber, material suitable for aeroplane construction can and is being saved to the extent warranted by the demand.

Though it is regrettable that such fine timber must be used for pulp, true conservation dictates its use for the purpose for which a market exists rather than to have it wasted. It is also claimed that larger financial returns are secured from its manufacture into pulp instead of into lumber.

Some Useful Facts About Oakum

The George Stratford Oakum Co., Jersey City, N. Y., has issued a useful and comprehensive booklet entitled "Useful Facts About Oakum and Kindred Products." This book contains a wealth of information and many artistic illustrations of the George Stratford Oakum Co., Jersey City, the largest oakum plant in the world. Oakum, which is a proportion of tarred fibre, as used in shipbuilding for caulking and packing joints of timbers in wooden vessels and the deck planking of iron or steel vessels, is made by preference from old tarry ropes and cordage of vessels. The various classes and grades of gum in which the George Stratford Co. specialize are set forth and it is announced that this organization is the only one making all grades of gum.

New Place to Carry Earnings

The latest thing in coin carrying devices is reported by the woodsmen who are drifting into the town of Virginia, Minn., in increasing numbers. Instead of the old scheme of carrying their stake in their woolen socks, loose in their pockets or in a wallet, the lumberjacks and miners now carry it in their neckties. They insert the bills in the lining of the necktie, pin the tie, and then tuck it in the front of their shirt. The advantage lies in the fact that one has his bank directly in front of him at all times. Incidentally, more woodsmen are wearing neckties this year than ever before.

Government is Reconstructing Air Forces

Although there are sceptics as to the possibilities of aeroplanes for forestry work, some of the larger lumber and pulp and paper companies, and also the Federal Government, believe that the experimental work should be continued. We have already reported that the Laurentide Company, Ltd., and Price Bros. are spending large amounts in trying out seaplanes and aeroplanes for fire protective and survey work, and a message from Ottawa now states that the Dominion Government will use aeroplanes for similar purposes on the West Coast and in the Rocky Mountains. The air force which is being recruited by the Government should prove of great value in this connection.

Will Pulp and Lumber Companies Unite?

One of the most popular rumors now being circulated is that the Riordon Pulp & Paper Co., Montreal, will shortly effect consolidation of interests with other companies. It is reported that these enterprises have valuable pulpwood and timber limits in the Ottawa Valley. Although it has not been directly stated, it is probable that the interests referred to are Gilmour & Hughson, of Hull, Que., and W. C. Edwards & Co., of Ottawa. These concerns have large timber and pulpwood holdings up the Gatineau River, and Gilmour & Hughson have a valuable waterpower at Chelsea, Que., where it is rumored that the merger will erect a huge pulp and paper plant. The Royal Securities Companies are said to be financing the big enterprise.

**SPECIAL REPORTS
ON CONDITIONS AT
HOME AND ABROAD**

Halifax Reports but Little Change in Situation

There has been an abundance of rain in Nova Scotia for driving this spring, and the log drives for the most part have already been delivered at the mills. A number of the larger mills have now started sawing under conditions which promise more than an average cut for the coming season. Many of the manufacturers have already disposed of a portion of their output, and in consequence of the steady demand for building material, do not expect any difficulty in selling the balance at profitable prices.

During the past month there has been little change in the general situation. If anything there may have been noticeable a slight falling off in demand for spruce and hemlock from the United States, which may be due to one or more of several different causes, and could hardly be taken as an indication of any considerable change in market conditions. During the early part of the year American firms bought quite extensively in this part of the country, and until these orders are cleaned up it is natural they should not be anxious to take on new obligations. In the meantime shippers are making strenuous efforts to get their stocks away, but unfortunately they are still seriously handicapped by embargoes on some of the American railroads, and the car supply is still far from satisfactory.

This apparent weakness of the market is taken by some as an indication that prices may not be maintained at their present level, but the manufacturer who is faced by the ever rising cost of all kinds of supplies and equipment does not exhibit very much apprehension on this score.

The English market has not yet shown that activity which shippers anticipated would follow the period of reconstruction after the close of the war. There is probably no other business that reacts more quickly to outside conditions than the lumber business, and the unfortunate labor disturbances and transit difficulties in England have had a harmful effect on the trade. The indications are, however, that an improvement may be looked for in the near future and in this connection it is gratifying to note that during the months of March and April the consumption of New Brunswick and Nova Scotia spruce in Liverpool and Manchester has considerably exceeded the imports of these stocks.

British importers however do not yet seem to exhibit very much enthusiasm over the situation and are little interested in spruce shipments containing more than a fair percentage of scantling, although the demand is active and prices are well maintained for a specification showing a good percentage of 3x7 and wider containing a fair proportion of 3x9 and wider. The hardwood market seems very well provided for although special sizes may be readily disposed of at satisfactory prices.

Summer shipments of spruce deals have begun from Halifax, Parrsboro, and the more important outposts of the province. The export of deals to the English market this season will probably not be over 50 per cent. of what it was last year due in part to the large proportion of the winter and spring cuts sold in the United States and absorbed by the local market.

The overlying stocks that were stored in different parts of Nova Scotia by the British Government have been disposed of to an English syndicate known as 'The Associated Importers, Ltd.', composed of a large number of the timber dealers in England. Up until the end of February the transportation of these stocks overseas was in the hands of the British Ministry of Shipping at which time the Ministry was demobilized and shipment ceased for the time being. Shipments have been now resumed however, by the syndicate from Halifax and also from St. John and it is probable that the balance of this old stock will be moved as fast as tonnage can be secured to carry it away.

Montreal Confident that All Will Be Well

Generally speaking, business in Montreal is easier. Although there are wholesalers who are frankly pessimistic as to the outlook, as a rule there is absolute confidence as to the maintenance of forces for a long time. The mills are asking very stiff figures, and some manufacturers declare that they have no intention of selling except at the quoted rates. The danger is that lumber might fall in sympathy with other commodities should there be a general reduction of values, as the outcome of the present agitation for a lowering of prices. Once a movement like this starts there is no knowing when it will end. Lumber, however, is not likely to be in large supply,

and if the present rate of construction is maintained, there will be a pretty good demand, thus assisting to keep the market strong. Some large building contracts have lately been let, but the great difficulty is to secure sufficient supplies of building material.

The hardwood section is as firm as ever. Wholesalers can sell as much as they can secure, and there does not appear to be any prospect of an immediate reduction.

Lath is without much change. Reports to hand from the Province indicate that there is likely to be a good supply in the future, many manufacturers which had ceased producing having again put their mills into operation.

The B. C. market has recovered a little. The reduction was due to the number of transit cars, but this was only a temporary condition.

Inquiries from across the border are fairly good. Unfortunately shipments are slow, owing to the lack of cars.

Pulpwood continues to be very scarce and prices have gone skyward for any that is available. As much as \$45 per cord delivered has been offered. Groundwood has also gone to record prices, while sulphite is away out of sight.

A fair amount of lumber is being shipped to the U. K., mainly consisting of birch and spruce. The rates are still very stiff, about 300s. per standard.

Trade in Ottawa Has Fallen Off Some

A sharp drop and general slowing up of demand, coupled with a continuation of the serious foreign car shortage which resulted in millions of feet on order being unable to go ahead, and in some circles the expression of a doubtful outlook as to what the market would be, were the high lights of the Ottawa lumber market during the closing period of May.

The requisitions from the United States fell away off. There was practically no special demand for any grade. It was a toss up if an order or inquiry was for dead or mill culls, or for higher priced stock. There was, so some of the trade reported, no means of telling what was going to happen next, and accordingly the dealers sat tight and were prepared to put up with whatever was coming. The domestic demand did not anywhere begin to meet expectations, and though stocks were scarce, and dry stock practically low, there seemed for some unaccountable reason, little desire to secure it on the part of purchasers.

One inference which might be taken from the situation was that the period from May 15th to 30th might be the starting point from which a lowering of prices could be reckoned. On the other hand there were others of the trade who scoffed at the idea of prices coming down, and referred to the prospective increases of from ten to fifteen per cent, which it is expected the manufacturers will ask for this season's saw cut.

To attempt to predict or summarize what may or may not happen was a hopeless task. The falling away of the demand while not creating any panic as to price, was far from being a hopeful symptom that present rates were to continue. All grades of lath for instance dropped five dollars per thousand, and shingles in the different grades dropped one dollar per thousand pieces. Otherwise the prices for lumber remained firm and unchanged as compared with the advances reported in late April and early May.

The slackening of the demand from the United States was to some companies, to say the least, unexpected. Rather than a falling away it had previously been hoped for that the volume of business would increase. One solution of the situation as given to the "Canada Lumberman" was that United States yards which made heavy purchases during the late fall and winter months had now found themselves well stocked, and that the demand for building materials which had been expected did not fully materialize. In eastern Canada the same story appears to hold true as to building. The volume expected is not there, or if it is, few persons have heard about it. More building is going on than last year, but there is hardly fifty per cent., if that much, of the expected building and construction work going on as was previously anticipated. Here and there a large commercial building is going up, and repairs to houses and dwellings are being made to a considerable extent. What is hitting the real estate and lumber markets is that the element of speculative building is absent. To find the solution for this one would have to be a close student of the money market. Unsettled

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 20 cents per agate line (14 agate lines make one inch). \$2.80 per inch, each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word, net. Cash must accompany the order. Minimum charge 50 cents.

Advertisements must be received not later than the 10th and 20th of each month to insure insertion in the subsequent issue.

Wanted-Lumber

Spruce and Shingles Wanted

We are always in the market for Spruce boards and 2 in., also Furring, Lath and Shingles.

RICE & LOCKWOOD LUMBER CO.,
9-12 Springfield, Mass.

PULPWOOD

We are open to purchase peeled Spruce and Balsam Pulpwood in carload lots. Quotations furnished on request. Also Deal ends.

The Jost Company, Limited,
285 Beaver Hall Hill,
1-t.f. Montreal, P.Q.

Cedar Wanted

We want to buy clear Eastern Cedar lumber. We are always in the market for this. Let us know what you have now or may take out later. We also want clear cedar lath, special sizes. There is good money in cutting these. Write us particulars.

Peterborough Canoe Co., Limited,
6-11 Peterborough, Ont.

Birch Wanted

No. 1 Com. and Btr., 4/4" to 16/4". Name us your best prices delivered here for dry stock. Will contract for mill output in Birch, Elm, Basswood and Ash.

WARREN ROSS LUMBER CO.,
10-t.f. Jamestown, N.Y.

Pulp Wood

We are prepared to buy unlimited quantities of peeled poplar and hemlock and peeled or unpeeled spruce and balsam pulpwood.

ADVANCES MADE

Thompson & Heyland Lumber
Company, Limited,
10-13 123 Bay St., Toronto.

WANTED

White Pine Spruce
ALL GRADES.
Also LATH of all grades

JOHN F. BURKE,
2-t.f. Aeolian Bldg., New York City.

Wanted

From 5 to 10 cars of 1 in. No. 2 Spruce, suitable for re-sawing for crating. No fancy prices.

W. Y. LLOYD,
350 Confederation Life Bldg.,
11 Toronto.

WANTED

One Carload of White Ash Squares

1 1/2 x 1 1/2 x 14 1/2", good clear stock. Send particulars to Canada Foundries & Forgings Ltd., James Smart Plant, Brockville, Ont., Canada. 10-11

Pulpwood Wanted

Wanted to purchase pulpwood in Nova Scotia, New Brunswick, or Eastern Quebec, for home consumption for Canadian Paper Mill.

Address stating price, quantity and location,

FRANK J. D. BARNJUM,
4-11 Annapolis Royal,
Nova Scotia.

Birch, Beech, Basswood, Maple and Other Hard- woods Wanted

Will pay spot cash on cars shipping point on any of the above; dry or green; log run or on grade. Will send inspector.

Wallace H. Partridge, Inc.

4-11 Springfield, Mass.

For Sale-Lumber

For Sale

4,000 cords 4 feet sap peeled pulpwood, Spruce and Balsam, containing about 90 per cent. Spruce, for immediate or next summer delivery, situated at Blue River, Canadian National Railway; 23 1/2 cents to Watertown.

QUEBEC LUMBER CO.,
98 St. Peter St.,
Phone 329
10-15 Quebec, Que.

Dry Hardwoods For Sale

50,000 ft. 2 in. Sound Planks, Dry.
50,000 ft. 3 in. Sound Planks, Dry.
5 cars 1 1/2 in. No. 2 Com. Birch, Dry.
5 cars 2 in. No. 2 Com. Birch, Dry.

Box 250, Canada Lumberman, Toronto. 11-12

Logs For Sale

36,000 ft. more or less good quality Hard Maple Logs. Will be delivered alongside of railway track. Bid to Box 259, Canada Lumberman, Toronto. 11

For Sale-Lath

10 cars Merch. Spruce Lath, 1 1/2" x 4'.
3 cars Hardwood Flooring, No. 1 and No. 2, also clear.
About Two Million Feet of Spruce, Pine and Hardwood in the new cut. Apply Box 258, Canada Lumberman, Toronto. 11

Pulpwood For Sale

1920-1921 Delivery

3,000-4,000 cords Spruce and Balsam.
1,000-1,500 cords Poplar.

Timber For Sale

3,000 acres Crown Right Virgin Timber in Ontario. Birch, Hemlock, some White Pine, Basswood, Elm. Warren Ross Lumber Co., Jamestown, N.Y. 6-t.f.

For Sale

About 20 cars Pine, 4/4, 6/4 and 8/4.
About 10 cars Hemlock, 4/4 and 8/4.
About 1 car Hardwood Railway Ties.

KAWATHA LUMBER CO., LTD.,
11 Lakefield, Ont.

For Sale

At Thessalon, 100,000 No. 2 White Pine Culls in transit:
1/2 car 3X B. C. Shingles.
1/2 car 5X B. C. Shingles.
3 cars 3X B. C. Shingles.

McGIBBON LTD.,
11 Sarnia, Ontario.

Wanted-Machinery

WANTED—Two heavy log or lumber trucks. Box 257, Canada Lumberman, Toronto. 11-t.f.

Wanted To Buy

Sawmill machinery only, capacity sixty to one hundred thousand per day. Must be heavy and standard make preferred. Apply P. O. Box 592, Vancouver, B.C. 10-13

For Sale-Machinery

Truck For Sale

Four-ton Acason Truck for sale, run 18 months, good as new, new tires throughout and in best of condition. If interested see this at once. Price \$4,040, \$2,500 cash, or will take amount in lumber. Terms on balance arranged. Apply

HALL BROS., LTD.,
11 Toronto, Ont.

For Sale

1 Clapboard Machine, cut either 4 or 6 ft. blocks.
1 Clapboard Planer, right and left hand combined.
1 Clapboard Trimmer, two saws.
1 Drag Cut-off Saw with truck and track for cutting logs into Clapboard Bolts. All the above made by Lane Manufacturing Co., and are in first class condition, complete with saws.

JAS. H. HOLMES & SON,
11-12 Doaktown, N.B.

For Sale

1 Waterous Big Champion Edger, 6, 28" Saws ... \$875.00
1 Waterous Steam Log Kicker, with Arms, 10" cylinder ... 200.00
1 Set Works ... 150.00
1 Waterous Nigger, 8 and 10 in. cylinders ... 275.00
2 Friction Drive Brackets, each ... 150.00
All the above in good condition.

Apply CONGER LUMBER CO.,
10-13 Pary Sound, Ont.

Circular Slab Resaw For Sale

Strictly First Class Machine carrying 42" inserted tooth saw. Keenan Bros. Limited, Owen Sound, Ont. 9-t.f.

Machinery For Sale

Heavy Planer and Masher, 24" Pony Planer, Sash Sticker, Horizontal Boring Machine, Elliott Woodworker, Power Paper Cutter.

A. J. LINDSAY,
10-18 90 Pembroke St., Toronto.

Engine For Sale

One Golden & McCulloch Engine, 18" x 38", complete with heater, pipes, oil pump, etc., in first class condition.

R. Laidlaw Lumber Co., Ltd.,
11-14 65 Yonge St., Toronto

For Sale

Morris Corliss horizontal twin steam engine, 18" x 48" cylinders, side cranks, 18" flywheel, 52" face, including jet condenser. In good condition and can be seen in operation. Apply Box 230, Canada Lumberman, Toronto, Ont. 9-t.f.

Wickes Gang No. 12

125 H.P. Steam Engine

Wickes Gang No. 12. Stroke 15", sash 40", steam press rolls, new type feed and oscillation, three sets of saws and hangers complete, the whole in first class condition.
125 H.P. Steam Engine. 16" x 18" balance wheel and flywheel, rock valves, Waterous make, excellent condition. Prices and further particulars on application to The Pembroke Lumber Co., Pembroke, Ont. 10-12

For Sale

The following second-hand Saw Mill Machinery and Equipment:—

- 1—Circular Saw.
- 1—Double Edger.
- 1—12" Cant Kendall Circular.
- 1—Wm. Hamilton Twin Circular with 3 span attachments.
- 1—Waterous Circular Resaw.
- 1—Five Saw 4 feet Slasher.
- 1—Two-saw Trimmer.
- 2—Jack Ladders.
- 1—Wm. Hamilton Saw Carriage (old make).
- 1—Waterous Box Board Machine—takes 16" and up.
- 1—Waterous Box Board Trimmer.
- 1—Single Lumber Rip Saw.
- 2—1 1/2" capacity Picket Machine (convertible into lath machine).
- 2—Two-saw Picket Trimmers.
- 1—Two-saw Lath Trimmer.
- 1—Lath Bolter (Law make), 4 saw.
- 1—Lath Single Side Machine.
- 1—Box Board Two-saw Edger.
- 2—Automatic Grinders—capacity 72 circular saws.
- 1—Automatic Grinder—capacity 40 circular saws.
- 1—Automatic Planer Knife.
- 1—24" Lumber Planer.
- 1—Champion Vescott Feed Grinder.

All of this Machinery and Equipment can be inspected at Temiskaming, Que., on application to

Kipawa Company, Limited
Temiskaming, Que.

Now being built and will be ready for delivery in 6 to 8 weeks.

One NEW 7½" x 10" JENCKES Saw Mill Type Plain Slide Valve Engine, developing 20 H.P. on 80 to 100 pounds steam pressure. Speed 225 R.P.M.; right hand; diam. pulley 40 in., face 8 in. Floor space 7 ft. x 4 ft.; weight 1700 lbs.

One NEW 4¼" x 5" H. P. TROY Vertical Steam Engine, complete with oil cups and throttling governor. Speed 300 R.P.M. Equipped with two 28" flywheels. Shipping weight 1100 lbs.

One 14" x 13" "LYCOMING" Left Hand Automatic Side Crank Engine Complete. Pulley 60" in diam. by 15" face. Slightly used and in good condition.

One SECOND HAND 9" x 12" JENCKES Saw Mill Type, Plain Slide Valve Engine, developing 30 H.P. on 80 to 100 lbs. steam pressure. Speed 200 R.P.M., right hand. Diam. of pulley 48", face 10"; floor space 7' x 4'; weight 2660 lbs. Sight Feed Lubricator, Oil Cups, Throttle Valve and Pickering Governor.

One NEW 12 H. P. JENCKES Vertical Tubular Boiler, 33" Diam. x 85" High. No. of tubes 52; length 4' 9", diam. 2" thick; shell 5/16", heads 3/8". Designed for 100 lbs. working pressure and to pass Quebec or Maritime Inspection. Complete with stack and all regular fittings.

One NEW 4 H. P. Vertical Fairbanks-Morse Gasoline Engine. Speed 350 R.P.M., water cooled, make and break ignition and governor, equipped with one plain and one adjustable friction clutch pulley, Symbol C-6860.

One NEW 4 H. P. Vertical Fairbanks-Morse Gasoline Engine, similar to above but without friction clutch pulley.

One SECOND HAND Motor Generator Set, consisting of a 6 H. P. Secor Oil Engine, direct connected to a 3½ K.W., 125 volt, 28 amp. Northern Electric Generator. This would make a fine lighting outfit for a large farm or saw mill and will handle 30 to 35 100-watt Mazda lamps or an equivalent number of smaller ones. Engine is equipped with governor, make and break ignition and pulley.

One SECOND HAND 4 H.P. Secor Oil Engine similar to above but without Generator. Complete with governor, make and break ignition and pulley.

For prices and detailed information regarding any of this equipment, write, phone or wire.

FOR SALE—TIMBER LIMIT in Haliburton County. 1100 acres. 60% hard maple, beech, black birch, ash, elm, etc., balance spruce, hemlock, basswood and cedar. Timber is tall and thick. Siding 6 miles. For terms and particulars apply to

FRED INMAN,
11-t.f. Milton, Ont.

Saw Mill For Sale

The Carriage is E. Long Manufacturing Company make, three blocks, one receding knee, double action set works, in very good repair.

The Edger is 5-saw, open front, with back press rollers. Slasher is 3 pair of saws on a double 22" mandrel. The table is 12 ft. long to cut short wood. Trimmers are an ordinary set which is put up by the E. Long Manufacturing Company. Saw mandrel is 4 in. diameter with adjustable boxes and adjustable guides. Log Jack is endless chain, about 250 ft. long. Cross carriers and slush chains and shafting. Pulleys and extra saws. One Shingle Machine in very good shape with 2 saws and collars, also saw jointer and saw, also wheel jointer. One 8 in. steam feed, 42 ft. long, with valves in good shape. One Steam Nigger, 6 in. and 8 in. cylinders. One Steam Engine, 75 horse power, slow turning up. Large Iron Fly Wheel, 2 large drive wheels. One Circular Saw, Filing Machine, Smoke Stack 60 ft. long. 4 Solid Tooth Circular Saws. One Inserted Tooth Circular Saw. Wooden Live Rolls, Chain Drive. 2 Boilers carrying 100 lbs. pressure.

Apply to Bethune Pulp & Lumber Co., Ltd., 10-13 Huntsville, Ont.

TIMBERLANDS FOR SALE

We have many attractive properties listed with us, for sale, in all parts of Canada and Newfoundland, in both Freehold and Crown lands.

BRITISH COLUMBIA

Large tracts of Cedar and Spruce situated on tide waters and the larger rivers, with or without saw mills.

NEW BRUNSWICK

Some very fine Freehold hardwood properties.

NEWFOUNDLAND

More than 3,000 square miles of the best timbered pulpwood land in the Colony.

ONTARIO

Many pulpwood and hardwood tracts, both Freehold and Crown land.

QUEBEC

Some excellent Freehold properties running heavily to pulpwood. Large pulpwood limits on the Upper Ottawa and on the North and South Shores of the St. Lawrence.

Cruiser's reports and blue prints, where available, will be sent to Principals or their accredited agents.

R. R. BRADLEY

4 Hospital Street,
MONTREAL, P.Q.

For Sale—Saw and Planing Mill

25 H.P. Engine, 50 H.P. Return Tubular Boiler, Good Saw Rig, etc., 24" Planer and Matcher, 18 H. P. Gasoline Engine, 2 Rip Saws, Tenon Machine, 1 Side Sticker, etc. Would sell Sawmill separate. Box 165, Canada Lumberman, Toronto. 7-13

Portable Saw-Mill Wanted

For June or July delivery. A good, used outfit with double edger and preferably with end-trimmers. Give full particulars of mill and power and if it can be seen in operation. Address Box 246, Canada Lumberman, Toronto. 11-13

Standing Timber For Sale

We have some very desirable blocks of Timber listed with us for Immediate Sale, located on railways and within easy distance of shipping centres.

Both large and small stands of Hardwoods. Choice block of Basswood, also a large area of Pulpwoods.

The prices we can sell at should be an inducement for intending purchasers to make full inquiries from us if contemplating operating this Autumn.

WM. COOKE & SON.

11-14 Timber Brokers,
Stair Building, Toronto.

Saw Mill Plant For Sale

Practically new and modern Saw Mill Plant, capacity about 30 Million feet per annum, located in the Interior of British Columbia on a beautiful inland lake and on the main line of the Grand Trunk Pacific Railway. About 500 Million feet of timber on and adjacent to Lake (about 90% Spruce) and another Billion feet available at reasonable prices. Natural conditions ideal for economical logging, manufacturing, piling and shipping. An advantage of about \$4 per thousand feet in freight rates to the Prairie Provinces over Coast shipments.

This property offers unlimited possibilities as a lumber, pulp and paper property. Would consider selling a half interest. Terms reasonable.

A. C. FROST COMPANY,
165 Broadway
New York City.
5-t.f.

Wanted

Owner of first class portable saw mill to cut nine thousand Pine and Spruce Logs, sixty foot average, now in the water in the Township of Coleman, three miles from Kerr Lake Siding, near Cobalt. Good wagon road. Write James Halliday, Gillies Depot, Ont., or Gillies Bros., Limited, Braeside, Ont. 10-12

Unusual Opportunity

For Sale Cheap—Water power in the Village of Kagawong, summer resort, surveyed by New York engineers and later by Detroit Engineers and the Hydro people, certified by the Robt. W. Hunt & Co., of Chicago, estimated 2,000 H.P.

An excellent opportunity for a cement proposition. There is an unlimited quantity of cement rock adjacent to power and some 120 ft. above level of bay there is ample room for plant and docks, together with 20 rods of water frontage.

Also the greater part of the Village of Kagawong with most of the adjoining lands, lumber, shingle and planing mill. Heavy American Standard Oil drilling outfit, store, farm and other buildings, 400 acres of sheep ranch, about 1500 acres of timber lands with natural gas for heating and lighting in logging camps. Other timber handy to purchase, also 610 acres in the vicinity of Gore Bay.

Object for selling, advanced in years.

JAMES CARTER,
Kagawong, Manitoulin Island.

10-12

Miscellaneous

Wanted

Two heavy log trucks.

Trenton Coopers Mills, Ltd.,
Trenton, Ont.

8-11

For Sale

3½-ton Acason Motor Truck, nearly new, with new tires. This truck is equivalent to five teams of horses at any kind of work. Guaranteed in first class condition. Free trial, price and terms arranged.

HALL BROS., LTD.,
Toronto, Ont.

11

No More Permits Issued to Cut Ontario Timber

Hon. Beniah Bowman, Minister of Lands and Forests, informed the Ontario Legislature recently that since the present Government had come into power he had refused to issue permits to cut timber in a small area or a large one. The policy had been to offer timber for sale by tender, and in following this system the department had received, in some cases, 50 per cent., and in others 100 per cent. more than under the old method of issuing permits. "If we continue to issue permits we might have considerable difficulties in knowing where to draw the line," the Minister opined.

The discussion was brought on by P. Heenan, Labor member for Kenora, who said he had been receiving letters and resolutions stating that the policy of the Government in refusing permits to cut ties was not fair because when large blocks of timber are put up for tender, requiring a large deposit, it debar the poor man. He suggested the Government might arrange its policy so that permits could be granted for small blocks of timber.

Z. Mageau, Sturgeon Falls, who is a well-known lumberman, was for cutting out every permit granted in the last three or four years, put the timber back for

sale, and if the people concerned were willing to pay the price let them purchase it back.

Major Malcolm Lang, Cochrane, took the view that because the permit system had been abused in the past that did not necessarily mean the permit system was wrong. He considered the small man should certainly have a chance, and if the permit system was to be cut out there must be some other that would meet the need that arose in so many cases.

J. H. Marceau, Nipissing, declared the way the permit system had been handled was somewhat of a curse. "Not fifty per cent. of the ties taken out in Northern Ontario had been paid to the Province," he asserted. He added that in past years practically a monopoly had existed.

K. S. Stover, Algoma, remarked the Province had been robbed of millions of dollars and the system of the late department was operated and carried out for the benefit of a clique.

Lumberman Narrowly Escapes Death in Auto Upset

Mr. C. W. Pitt, his wife, son and daughter, and Mrs. P. W. Lyons, of Collingwood, Ont., recently had a miraculous escape from death. They were on their way from Toronto to Collingwood in Mr. Pitt's car, with his 18 year old son, Bertram, driving. Just north of Minessing they turned out to pass another car when their front wheel broke and they turned completely over in a deep ditch. Mr. Pitt and his daughter, Bessie, who is 16 years old, both had their collar bones broken, and in addition Miss Pitt had her face very badly cut and bruised. Mrs. Pitt and Mrs. Lyons were severely bruised, and Mr. Bertram Pitt had his wrist seriously injured. Mr. Pitt is the manager of the Collins Inlet Lumber Co. His friends here will be glad to hear that he escaped with so few injuries.

The Forest Revenue Has Increased in N. B.

The forest revenues of New Brunswick have more than doubled during the past year. It is estimated that the total will amount to about \$1,500,000. This is nearly three times the forest revenue for 1917 and closely approximates the forest revenue of Quebec. It falls only a few hundred thousand dollars short of the forest revenue of Ontario. This is on a cut of some 343,000,000 feet of logs, ties, poles and pulpwood, supplemented by some minor sources of revenue.

The province of New Brunswick achieved this highly satisfactory result by a thorough reorganization of its forest service. This is now administered by an Advisory Board consisting of three representatives of the Pro-

vincial Government and two representatives of the timber owners. Patronage has been eliminated and efficiency and economy have been furthered by making the one organization responsible for the various lines of forest work, including fire protection, enforcement of cutting regulations and timber scaling. The staff employed consists of full-time men, who work for the Government only. Hence the scaling has been much closer, and this fact, together with a higher royalty and perhaps a slightly increased total cut, has brought about the immense increase in revenue and thoroughly vindicated the Government's progressive forest policy.

Advices Steps to Break the Ban on Pulpwood

The resolution authorizing the President to appoint a commission to treat with Canada on the embargo placed by the Dominion on pulpwood, for use in making newsprint paper, was favorably reported to the House at Washington by the Foreign Affairs Committee. The resolution has already passed the Senate. Its passage will be practically automatic. The amendments inserted by the House were of minor importance. The report follows in full:

"Your committee has made an exhaustive investigation of the shortage of pulpwood in the United States, and finds it is largely due to those embargoes which were laid upward of ten years ago, and that, with the exception of one or two mills on the Pacific coast, there has not been a paper mill constructed in the United States since those embargoes were laid, and no additions built to present mills. The spruce, pine and hemlock, which alone can be used for the making of print paper, have been rapidly reduced in quantity and quality until there is none available for the Eastern mills, except in small portions of Maine, New Hampshire, Vermont, Minnesota and Michigan. In these States the supply is rapidly diminishing and becoming more inaccessible.

"The reports of our Consuls, together with the newspaper clippings printed in the hearings, will show conclusively that it has been the policy of the Dominion of Canada, for upward of ten years, to force American paper makers to move into Canada in order to secure an adequate supply of pulpwood. This a number of them have already done.

"The embargoes are limited to the Crown lands, but the testimony shows that quite recently during the last year strong efforts have been made to prohibit American manufacturers from buying pulpwood from the owners of land in fee. The testimony also

conclusively shows that we must have pulpwood from the Crown lands of these three Dominion Provinces (Ontario, Quebec and New Brunswick), otherwise our paper mills will eventually be compelled to close down or move into the Dominion of Canada. Canada must have coal, sulphur, kaolin and dyes from the United States or suffer a similar misfortune.

"It is true that the Dominion of Canada or the Provinces have a legal right to lay these embargoes, but, on the other hand, we have the same legal right to lay embargoes on the products of the United States; and if we adopt the same policy as Canada the paper mills in both countries would have to cease operation.

"Your committee feels confident that the appointment of the committee to confer with the Dominion and Provincial Governments, as provided in the resolution on this matter, which is of much grave importance to the people of the United States, would bring about an amicable adjustment of the matters in dispute."

Pioneer Lumberman Passes Away in the West

Timothy Foley, pioneer Minnesota lumberman, and widely known railroad contractor, miller, wholesale grocer and capitalist, died at his home recently in St. Paul, Minn., after an illness of several months. He was born in 1838, in Lanark County, Ontario.

Market Correspondence

(Continued from page 71)

labor conditions may have a good deal to do with it, but lumber dealers at Ottawa did not attribute this as the primary cause for the non materializing of their expectations.

As against this gloomy and problematical outlook, there seemed to be no good reason to suppose that the manufacturing cost of lumber had gone down one penny. Without the demand coming from and being created by the consumer, the retailer cannot dispose of his stock, nor can the wholesaler sell him more. In turn the manufacturer has got to get his stock out of the way to the wholesaler, no matter what happens. Demand and not price, appeared to be the fundamental factor. Even though the demand fell away, there still remained the fact that dry stocks were short. It appears that if there is to be a salvation of present price levels that the shortage of stocks and increased manufacturing charges will bring it about.

Just where lumber, pulp and paper manufacturers were going to get off at in connection with the new budget proposals remained a question at Ottawa up to May 20th. No one in the trade knew what was going to happen or how the one per cent. tax on sales of manufactured articles was going to work out. The general impression was that the one per cent. tax would apply to all manufactured merchandise used in Canada, but not to the amount exported. If this view finally proves to be correct, it will mean that the lumber manufacturers in the Ottawa Valley will not, generally speaking, have to pay the tax on approximately sixty per cent. of their output.

Prices outside of lath and shingles remained firm. The saw-mill season was reported to be going ahead at a satisfactory gait, though all of the mills in the Valley had not opened up. The log supply was reported by most mills to be good, though the water levels were low. Low water will result in at least one mill having to make a second drive to get sufficient logs down to the mill pond, for the sawing season.

Labor with the sawmills continued to remain fairly plentiful. With the woodworking plants and factories, while the future outlook as to labor was doubtful, there was up to May 20th sufficient workers on hand to man the plants. At the date of writing it appeared that a general strike of the workers in woodworking plants and factories would take place. Some time ago the men demanded increases ranging from twenty to thirty-five per cent., and asked of the employers that their union, which has a membership of upwards of five hundred be recognized. The workers appealed to the Labor department for a board of conciliation, but the manufacturers would not lend their assent or sanction. By doing so they would have recognized the men's union. The department of Labor had not the power to grant a board unless both sides agree. The factory workers are not, under the Lemieux Act, classed as employees of a public utility, and therefore the consent of both sides for a board is necessary before the department can act. Some factory owners made the statement that there was not a chance in the world that they would go to arbitration, or agree to a board. Rather they would shut down their plants. "What is the use of going to arbitration when there is nothing to arbitrate about. The employers have given their men all they can. If the men are not satisfied with it then we will have to close our mills and let the men go out on strike or do whatever they want to do," stated Mr. G. P. Davidson. Several of the Ottawa factories granted increases ranging from ten to fifteen per cent. over last year's salaries to the men, which became effective May 1st. Still the workers were not satisfied.

The situation as regarding European exports showed little or no change. A few shipments continued to go forward, but the volume was not as great as during a corresponding period a year ago. A shortage of stock for the English market was reported. The chief demand was for merchantable spruce, and red and white pine. Owing to the shortage of stocks it was not expected that the shipments to the Old Country would be as heavy this year as in 1919.

St. John Market is Active and Mills Busy

All the mills at St. John are now running, the mills of Stetson, Cutler & Co., sawing long American logs, while all the others are sawing shorter provincial logs. The estimated turn-out per day of the St. John plants is about 350,000 feet of sawn lumber every 9 hours—with an increase over last year of 30 per cent. in wages. The mills are doing poorer work than ever as, with every increase in wages, the men seem disposed to be more careless and unsteady. Help is not scarce at St. John, there being plenty of men to man all the mills. About fifty per cent. of the cut is for the American market, the other 50 per cent. being for the British market. During the past week good rains have come.

On the Upper St. John, in Quebec and Maine it looks as if all the brook drives would come on to the main river without any hang

up. It is then up to the different log driving companies to see that they are passed along and reach the booms at Fredericton, N. B., where the logs are sorted to mark and rafted. The cut, as explained before, in a previous issue, is greater than a year ago. The English market for narrow six inch and under in width is very dead and no offers can be had for narrow stock, as it is claimed that large stocks of government lumber are being offered by the committee in charge in England, it being largely responsible for the present slump in prices as they are sacrificing prices to clear up the material. This stock is very narrow, practically no 7 x 3 and up mixed therein. For 7 x 3 and up the price remains firm and stocks are quite scarce.

Freights are yet hard to find at any reasonable rates, very little shipping by steamers taking place from St. John. Large quantities of narrow stocks for the American market are being shipped from here. If it were not for a shortage in American cars, the shipments would be much larger. During the last few days the foreign car situation has become more acute and, no doubt, will be worse unless the Canadian roads will allow their cars to cross into United States. This will not be at all probable as the United States have a large proportion of Canadian cars on their tracks at present. The C. N. R. and C. P. R. are allowing some Canadian cars to go to central points in Maine but only a few and not west of Portland, Maine.

Prices in the American market are firm. Very few buyers are visiting the provinces at the moment as they want to get their purchases made early in the season shipped out before any more are made. Business in general is good. Lath prices are not as strong as they were, the price being around \$9.00 to \$10.00 on cars here with buyers getting scarcer every day, some parties wanting to cancel on high contracts made some time ago. Shingles remain firm at old prices and good demand. Local business is not good as far as some of the factories are concerned but the cut-of-town business is good. This helps to swell the volume of trade and keep the wheels going to capacity.

Current Trade Conditions

Ontario and the East

Many different opinions prevail regarding the present condition and outlook of the lumber market. Buying for some time has been rather quiet but on the whole retail yards report a good demand from the country district and smaller towns. Building is pretty active in the larger centres and, while strikes have held up operations at some points, there is, on the average, a decided indication that building will be more active this season than it was last.

In softwoods all dry stocks are practically off the market at the present time and the demand for new stock is coming along as well as can be expected, taking into consideration existing conditions in the labor market, car situation and the embargoes on railways. Transportation facilities are improving somewhat and freight is being accepted for certain points across the border, from which it has been debarred for several weeks owing to the outlaw strike.

Some big scales of white pine stock have taken place during the past few days at an increase of 40 per cent. to 45 per cent. over last year. Requisitions for hemlock of all kinds are still very strong and this wood is holding its own. Mill run 1½ inch and mill run 5/4 inch white pine are pressing items at the present time.

What has added to the uncertainty of the building and wood products situation is the general discussion which has taken place in regard to the values of various commodities being rapidly reduced and the apex of prices being reached. This creates a feeling of uncertainty and the newspapers have been publishing rather sensational tales to the effect that lumber prices are coming down, basing their deductions on the softening of quotations in connection with the recent congestion of B. C. cars at Cartier, Ont. It is true there was a cutting on some lines in order to escape the demurrage that would be levied on so much rolling stock, and several bargains were secured. This, however, was only a flurry in the general situation and the effect is now largely passing over.

The demand from the United States has fallen off considerably of late owing to the quiet situation prevailing across the border and the railway tie-ups.

Lath are holding firm in value and there was not the quantity sawn up north that it was expected would be produced. Most of the dealers are fairly well supplied but do not look for any particular drop in prices. The values range from \$12.00 to \$16.00 and \$17.00 at most mill points in Ontario. A few British Columbia pine lath have been sold in Ontario but the demand is very limited.

In regard to shingles, the situation is very much unsettled and prices have been hitting the toboggan. Most dealers are now fairly

well supplied. Some of the Western mills report that they are turning out shingles at a loss owing to the high prices of logs. Several plants have closed down and others are operating only one shift.

The labor situation at many mill points is not any too reassuring and in the East a few firms have had difficulty in getting their mills started owing to outside agitators working among their men.

The high cost of producing lumber is everywhere being discussed and while there may be a recession in values of clothing and other articles, it must be remembered that lumber was one of the last commodities to go up and, therefore, will probably be the last to come down.

One of the interesting items in connection with the importation of southern hardwoods is that the war tax of $7\frac{1}{2}$ per cent. is now abolished. This may result in a keener competition with some Canadian woods, particularly as the market in the United States is barely holding its own at the present time.

In Ontario there is a good steady demand for birch, maple and ash so far as the factory trade is concerned, and automobile producers and agricultural implement manufacturers are taking all that they can secure.

It is difficult to analyze the general situation at the present time but on the whole values are holding firm and as the days pass the feeling of confidence in the future grows more solid. Some travelers and wholesale firms report having disposed of more carloads during the past two weeks than at any similar period during 1920.

The export situation is promising but many firms are holding back in the belief that ocean freight rates will come down materially.

Another month's record in building permits, issued by the city architect's department, Toronto, was reached in April, the total value of these amounting to \$2,138,025, as compared with \$1,620,966 last year. This is a higher figure than in any previous April. Judged by value, dwellings stand first in the various classes of buildings, with an approximate value of \$1,000,000 for 255 houses. Private garages, for which permits were issued, number 380, with a value of \$200,000. The approximate figures for other classes are: Four warehouses, \$180,000; 25 stores, \$149,000; three factories, \$58,000; and about 125 additions to dwellings, \$52,000.

United States

General conditions in the lumber market are rather difficult to define at the present time as there has been so much talk about break in prices of other commodities and the peak being reached, that it has had its effect in the wood products arena. Business in many centres has fallen off considerably and there have been declines on several lines of wood. The railroads are using considerable quantities of material for construction which are of special cutting. So far as the yard and shed stocks are concerned, the demand is quiet. Whether it will pick up shortly or not, it is difficult to tell owing to the industrial unrest, the general political situation and congestion in transportation.

There are certain manufacturers, who heretofore have maintained that prices are not declining, but are now revising their stock sheets. Yellow pine has dropped some in value throughout and for the first time in some months mills are seeking orders.

The demand for hardwood just now is comparatively quiet on entire list, which includes timbers and special cutting, and the prices on certain items are at a standstill. There have been some improvements in the conditions surrounding logging and hardwood manufacture in some parts of the Mississippi Valley territory. In the South logging is still virtually at a standstill and intermittent rains are further deferring the time when operations can approach normal. Many mills are entirely without logs; others have suffered damage to equipment because of high water that will necessitate extensive repairs. Southwest Louisiana and Texas mills are operating at normal.

Practically all the shingle mills of the Pacific Northwest are closed down as a result of poor demand, as well as for the reason that with extra stars selling at \$4.15 to \$4.40 and extra clears at \$5.10 to \$5.40 a thousand f.o.b. mill, and with red cedar logs costing \$36 to \$40, manufacture at a profit is impossible. From some sections come reports that red cedar log prices have declined to \$30, but this lower price is not as yet general. But even if log prices decline materially from their former high levels it is doubtful whether the shingle mills will resume manufacture until demand and prices of their product have improved materially and the market has to some extent been cleared of present heavy stocks. White cedar shingles have moved very slowly during the last two months, on account of the large quantities of red cedars on the market selling at prices considerably below what is asked for the white cedars.

What appears to be the feature of the hemlock market at this time is the competition which this wood is beginning to meet from Douglas fir. Prices of Douglas fir have declined during the last few weeks to such extent that the hemlock manufacturers claim that

they cannot meet them without actual loss, and this creates a problem similar to that of several years ago, when southern pine came into such active competition with hemlock on the middle western markets at such low prices as to render the manufacture of the northern product actually unprofitable. This situation has not succeeded in demoralizing the hemlock market, however. Stocks at the northern mills remain low and broken, and while demand is small there is a ready sale for what hemlock can be put on the market, with the result that prices have shown no perceptible decline from recent levels.

There is little domestic business in Douglas fir being transacted at this time. Prices are going downward, and where the stopping point will be is hard to predict at this juncture. But the manufacturers see hope in the situation. They say that, naturally, nobody buys on a falling market, but that as yard stocks are being eaten into, when prices once hit bottom it is logical to expect that there will be a big scramble for stocks, with the result that there will be a rebound in values. In the meanwhile, it is largely a game of watchful waiting.

Great Britain

There is but little change in the hardwood market and the demand is moderate. It is believed that the total supply has not been sufficient so far to equal the consumption this season. It is stated that if those, who have stocks on hand, do not become discouraged, but are content to hold on, there will be no decline in quotations. Now that May weather is prevailing and outdoor conditions are favorable, trade in the forest products line is picking up considerably. While the Government housing scheme has not made very rapid advancement, still results are beginning to show and some building is now going on.

Referring to the uniformity in design of building, it is pointed out that while a saving of expense is experienced in some directions, there is a serious handicap so far as timber is concerned. The demand for special sizes is likely to cause a great scarcity of 2 x 4, 2 x 3, etc., and to force the manufacture of these from larger wood. There are still many complaints about red tapeism, and anything that can be done to expedite matters, is appreciated.

Recent reports from Manchester and Liverpool show that the combined stocks of spruce at these cities is now 26,380 standards, which is considerably larger than at any time during the past four years. The returns cover the month of April. In birch logs there are 400 loads at Manchester and Liverpool, which is also the largest in the last three years. In birch planks the number of standards on hand is 1,375, which is double the amount of any year since 1915.

Speaking of the f.o.b. market, the Timber Trades Journal in a recent issue says:

The opinion has been frequently expressed that when exporters in Scandinavia find the shipping season has commenced they will be glad to accept some reductions on the top figures of the year, in order to keep their stocks on the move. Many English firms, after purchasing a certain amount, have held off from the market in anticipation of this happening. It is early days yet, but there is certainly no sign whatever of any weakening in values either for Swedish or Finnish wood, but it must be remembered that in several of the recent seasons an easing in prices has taken place in the summer months, only to be followed by reaction towards the close of the year. Every season, and particularly now when wood is so expensive, exporters are naturally anxious to get their yards as clear as possible for the coming winter. When the market is quiet, as it naturally is when most importers have purchased the bulk of their prompt requirements, the temptation to press sales is often strong, and this year may be no exception to the rule. Similarly with importers, when the supplies arriving are large, and stocks heavy, a cash buyer who comes along to relieve the situation generally receives a hearty welcome, and prices are not rigidly adhered to. This week we have heard the most divergent views expressed regarding the prospects, and when these views are analyzed it is found that the money question is at the root of the matter. Those who have not bought largely, and can afford to store their wood, are quite confident; whereas, on the other hand, those who have plunged a little, and know that they must keep selling, are becoming rather nervous. Exchange has remained fairly steady of late at a little under four dollars to the £, and many think an improvement may shortly be expected. As in the case of softwoods, the total supplies of hardwood are scarcely likely to be equal to the consumption this year, and if holders of stocks keep their heads, and are not depressed during the quiet periods, there should be no serious drop in values. Pitchpine is rather weaker, and the supplies of this wood are ample in many districts.

There are seasons for lumber just the same as for clothing and millinery. Have you any new ideas to offer your trade this spring?

Handle it Mechanically

with

JEFFREY CONVEYERS

The Standard Equipment for Handling Mill Refuse, Logs, Lumber, Etc.

"V" SHAPED TROUGH for large capacities of Refuse, Blocks, Etc. An all-steel trough with re-enforcing angles on the top edges may be used in place of the wood trough with steel lining illustrated above.

JEFFREY GAPPED SHEAVE WHEELS with Solid Rim and Single Flexible Teeth. Also furnished in Adjustable Rim—Double Flexible Teeth.

Jeffrey Wire Cable Conveyers

are especially adapted to economical handling of large capacities and to long distance handling of Sawdust and Mill Refuse.

Long Link Coil Chain with U-Bolts and Cross Bars carrying Slabs from Mill to Fire Pot.

Simple and Inexpensive Conveyers for the handling of Logs, Ties, Lumber, Blocks, Slabs, Refuse, Saw Dust, Coal, etc., can be made from our Standard Line of Saw Mill Chains.

The McChesney sawmill at Porcupine, was recently burned, the loss being \$100,000.

Bert Marsh, whose sawmill was destroyed by fire recently at Auburn, Ont., will rebuild at once.

John Staddon, of Arner, Ont., intends making extensive improvements and additions to his sawmill.

The Pigeon River lumber mills at Port Arthur have resumed operations for the season. A large quantity of logs is on hand and it is expected that the plant will be very busy until the fall.

The T. F. Shufley Co., Limited, saw manufacturers of St. Catharines, Ont., have been authorized by supplementary letters patent to increase their capital from \$200,000 to the sum of \$500,000.

The lath mill recently equipped by Rhodes & Mayor at Thessalon, Ont., has been put in operation. This firm installed new machinery in the woollen mill building to manufacture lath and other wood products.

Fire, believed to have started from sparks from an engine, did considerable damage to the lumber yards at Jaffa, Ont., of James Payne & Son, of Tillsonburg. A number of logs and a quantity of wood was destroyed.

Walter T. Pigot Lumber Co., of Windsor, Ont., are erecting a new planing mill, boiler house and dry kiln on Langlois Ave. A new office building and shed will also be put up. The planing mill will be 60 x 150 feet and two storeys high, and of solid brick construction.

F. F. Burton, of the Long Lumber Co., Hamilton, who has been driving a car for the past twelve years, had an unusual experience recently when his McLaughlin coupe was stolen. It was recovered the next afternoon by the police and returned to the owner, who reports that this is the first time in all these years that he has ever had his motor taken for a joy ride.

The Spanish River Pulp & Paper Mills, who recently installed two new machines at Espanola, are now installing another newsprint machine at Sturgeon Falls, which will turn out fifty tons additional. This will bring the capacity of the Spanish River mills at Sturgeon Falls, Espanola and Three Rivers up to 650 tons a day. The entire output for next year will run about 195,000 tons, about 85 per cent. of which is exported.

McCabe Bros., Tottenham, Ont., suffered a series setback when their large planing mill was destroyed by fire. The dry kiln, with its stock of lumber, was also burned. The strenuous work, on the part of the fire brigade and citizens of the town, saved the sawmill and lumber yard. About thirty-two machines were destroyed, the damage amounting to between \$30,000 and \$35,000. No insurance was carried.

Kalbfleisch Bros. Limited, with a capital stock of \$150,000 and headquarters in Stratford, have been incorporated to carry on the business generally of manufacturers and repairers of automobiles, motor trucks, bicycles, etc., and planing mill proprietors, sawmillers, lumber dealers and general contractors. The new company are empowered to acquire and take over as a going concern the two businesses now conducted in Stratford, one by Henry Kalbfleisch and George Kalbfleisch, in partnership under the name of Kalbfleisch Bros., machine shop and garage proprietors, and the other by Henry Kalbfleisch, George Kalbfleisch and Emil Kalbfleisch in partnership under the name and style of the Kalbfleisch Planing Mill, planing mill proprietors and lumber dealers.

Eastern Canada

The sawmill of F. D. Swim, Doaktown, N. B., was destroyed by fire. E. T. Nesbitt, Enreg., Quebec, P. Q., has been registered as a dealer in lumber.

The new lath mill of Whalen & McDade, of Woodstock, N. B., is now in full operation.

John Argue is rebuilding his sawmill at Bryson in Pontiac County, Que., recently destroyed by fire.

The partnership known as Girard & Lupien, who conducted a sawmill at St. Monique, P. Q., was recently dissolved.

It is the intention of Tobin and Mitchell to erect in the near future a sawmill at Bell River, Pontiac County, Quebec.

The Standard Iron & Lumber Co., of Montreal, are making extensive alterations to their factory at 524 St. Ambrose Street.

The Fraser and Bryson Co., of Ottawa, are considering the erection of a ground wood pulp mill at Bell River, Pontiac County, Quebec.

The Gloucester Lumber & Trading Co., Bathurst, N. B., was recently registered. Wm. G. White and George A. Rogers being the partners.

The sawmill of A. Lemieux of Thetford Mines, Que., was completely destroyed by fire recently. The loss is \$15,000, and there was no insurance.

A large number of forest fires have occurred in the Laurentian Mountains, P. Q. Some of the forces of the mills assisted in fighting the fires.

The Fraser Companies, Ltd., South Nelson, N. B., are building a boarding house for their employees, consisting of 26 rooms, with hardwood flooring and beaver board finish.

Winthrop Bower's property on the Shelburne River, N. S., timber and a mill, has been sold to Hon. Robert Irwin, John Cox, Jos. Sutherland and John Etherington for \$50,000.

The Dalhousie Lumber Co., Dalhousie, N. B., have recently installed a Waterous 72-inch gang edger, which it is expected to increase the output of lumber by 2,000,000 ft. for the season.

Construction of an 18,000-ton pulp mill will be undertaken at East Angus, Que., by the Brompton Pulp & Paper Co., Ltd. This plant will probably be in operation before the end of the year.

Pulpwood valued at nearly a half million dollars, the property of the Cape Breton Pulp and Paper Company, went through the booms on the North River at Murray, C.B., recently, and was swept out to sea. As the

pulpwood was cut in short lengths of four feet, to gather it together again will be nearly impossible, and it is probable that the whole of it will be a loss to the company.

Champoux Bros., of Campbellton, N. B., have recently purchased as a going concern the Matapedia Lumber Co. and will be manufacturing about 5,000,000 ft. of lumber per year. The size of the limit is about 125 square miles.

A. Filion, Limitee, Nouvelle, Que., have been incorporated to carry on a general business, dealing and manufacturing lumber, timber, pulpwood and other forest products. Capital \$10,000. Among the incorporators are A. Filion, and J. S. Filion, both of Victoriaville, Que.

Julian E. Rothery, consulting forester, of New York, spent a few days in Fredericton consulting with Provincial Forester G. H. Prince. J. D. Gilmore, of the Anglo-Newfoundland Development Co., who was in consultation with Mr. Prince, left recently for his home in Grand Falls, Nfld.

The Kitchener Timber Co., Limited, Montreal, Que., were recently granted a federal charter to carry on a general lumber, timber and pulpwood business. Capital \$200,000. W. W. Craig, merchant and J. A. Crowe, manufacturer, both of Montreal, are two of the incorporators.

The Sea-Sled Company, Limited, Montreal, Que., have been incorporated to manufacture and deal in boats, aeroplanes and craft of all kinds. Capital \$1,160,000. Among the incorporators of the company are Hon. William James Shaughnessy and Chilion Graves Heward, both of Montreal.

L'Aqueduc & Pouvoir d'Amos, Limitee, Shawinigan Falls, Que., were recently granted a provincial charter to conduct a business as sawmill owners, manufacturers and dealers in lumber, timber and other wood products. Capital \$90,000. G. McTeigue and R. Brodeur, both of Montreal, are two of the incorporators.

Messrs. MacIntosh Bros., contractors and builders, of Bathurst, N. B., have recently erected a planing and sawmill and will be manufacturing sash and doors, hardwood flooring, and cedar shingles. They have a portable mill, situated at South Teteagouche, and have installed a power feed rip saw purchased from the P. B. Yates Machine Co., Ltd., and a chisel mortiser, purchased from the Canada Machinery Corporation, Ltd.

A million and-a-half acres of pulp wood forests in Southern Labrador immediately north of Cape St. Charles in Newfoundland territory is being acquired by a United States securities firm to supply the British trade. Details of the deal are not yet available, but it is understood that full survey of the area has been made by means of photographs from an airplane and the corporation has practically completed its arrangements.

A small forest fire occurred in Bellechase County, P. Q. Two trains of men were despatched by the Quebec Central Railway to the limit affected, and several lumber firms, including the B. C. Howard Company, the Murray and Gregory Company, and the St. Maurice Lumber Company, sent large gangs of men, who, together with the railway employees, successfully prevented the flames from spreading and extinguished the fire.

Messrs. C. H. & H. W. Read, Smith and Milton have purchased the mill and 900 acres of timber, mostly spruce and pine, situated at Upsalquitch, N. B., from A. E. Smith, of Bathurst, N. B., who will still retain an interest in the company. They have already cut about 3,000,000 ft. of lumber this season. Messrs. C. H. & H. W. Read are connected with the Read Stone Co., Ltd., of Stonehaven, N. B. Mr. H. Milton is a resident of Bathurst, N. B.

La Compagnie Philippe Lavasseur Limitee, Montmagny Station, P. Q., were recently incorporated to operate sawmills, shingle mills and to carry on a general lumber and timber business. The new organization will also take over the company known as La Manufacture de Boites de Montmagny, Engr. Capital \$49,000. Philippe Lavasseur, manufacturer, and G. Marcotte, lumber culler, both of Montmagny Station, are two of the incorporators.

Western Canada

Demanding an eight-hour day, employees of the Usk sawmills, Prince Rupert, have declared a strike and work has been suspended. The company offered a nine-hour day with proportionate pay, but the men rejected the proposal.

The White Rock Lumber Co.'s mill at White Rock is nearly completed and the machinery will be installed very shortly. In the meantime the work is progressing of extending skid roads up to the hitherto untapped timber limits of the highlands back from the summer resort.

Among the recent incorporations in British Columbia are the following: James Logging Co., Ltd., Vancouver, capital \$2,000,000; the Yellow Fir Lumber Co., Vancouver, \$150,000; Prince George Sawmills, Ltd., Prince George, B. C., \$25,000; Lansor Lumber Co., Duncan, B. C., \$10,000.

That the demand for lumber for building purposes within the next month will greatly exceed the supply was the statement made recently by H. H. Ross, president of the Ross Saskatoon Lumber Company. At present, he said, there was a large supply of lumber on hand, and dealers are willing to sell at a fair price.

Among the new companies recently granted a charter in British Columbia are: The Lorne E. Butt, Lumber and Shingle Mills, Ltd., \$25,000, Vancouver; Munson Sawmills, Ltd., \$10,000, Kelowna; Georgie Lake Logging Company, Ltd., \$100,000, Victoria; Killarney Loggers, Ltd., \$25,000, Vancouver; Extra Provincial: J. E. Morris Lumber Company, Inc., \$100,000, B. C. office, Vancouver, United States office, Seattle; Osprey Lumber Products, Ltd., \$75,000, Vancouver.

The order placed with British Columbia lumbermen through the Associated Timber Exporters' Limited for the United Kingdom is for 13,000,000 feet of railway construction work. The shipments will cover the period from June to December and will be made by way of the Panama Canal. Of this order Vancouver Island lumbermen will receive 5,000,000 and the remainder will go to the mainland mills. During April the Associated Exporters Limited reported 19,000,000 feet of lumber sold on the foreign market.

A recent despatch from Victoria says a general demand for an increase in wages in the logging camps of the province with the alternative of a strike if the demands are not met, is the programme of the Loggers' Union, the organization which forms the backbone of the One Big Union in British Columbia. So far there is nothing in the nature of a general walkout, but officials of the One Big Union are predicting that unless the full demands to be formulated are met, there will be a province-wide strike that will involve some 16,000 loggers.

"HAMILTON" CIRCULAR RE-SAWS

Here is a strong, rigid, well designed machine, specially gotten up for resawing slabs. The feed rolls are carried on a sliding frame that is easily adjustable to cut lumber any desired thickness. The binding or press roll is 13 in. diam., fitted with saw discs and power driven. The saw used is 42 in. diam., driving pulley 18 in. diam. x 12 in. face. Cut shows Left Hand Machine.

We also make this machine with wooden frame, having the mandrel and saw carried on an adjustable sliding frame.

Descriptive circular sent upon request.

"HAMILTON" HUSK FRAMES

Made in different sizes to suit all requirements. Frames are all of cast iron, of heavy section throughout, planed on top and bottom, with mandrel boxes lined with high grade babbit. Mandrels are exceptionally large, of forged steel with forged collar, and the guide is the famous Parkhurst steel saw guide with steel splitter.

We manufacture a complete line of up-to-date Sawmill Machinery for either Band or Circular Mills.

Would You Spend \$575 to Save \$2,000?

Last Fall a certain lumber concern in Ontario purchased a small 10 H.P. Double Drum Belt Driven Hoist from us for handling logs. This machine cost them \$550, plus \$25, freight, total \$575. They operated this small Hoist by a belt from a gasoline Engine, the whole making a light, compact, portable outfit, easily moved from place to place.

They were able to work this outfit in the coldest weather, and found that it did the work of three or four teams.

As it required only one man to operate the Hoist, it is easy to figure the daily saving effected by the use of this machine. In other words, compare the wages and board of one man and the cost of a little gasoline with the wages and board of four drivers and the feed and upkeep of eight horses.

This machine handled up to one thousand logs per day.

We make these machines for either Steam or Gasoline Power, and in 7 sizes, one of which should be just right for your use.

GOODHUE BELTING

FACTORY TO YOUR MILL

TO the saw mill and woodworking industries we offer an unusually good belting value in our "Acme Waterproof." This belting is specially made from the best hides to run in wet places where only the best quality belt can "make good." If you require any belting you should enquire into the merits of "Goodhue Belts," then you will buy a "Goodhue." According to the conditions under which the belt has to run, we recommend "Extra," "Standard" or "Acme Waterproof"—each brand the best quality, but each made for a different service

The Ideal Edger for Light Mills

Specifications

Our new Double Edger is built on entirely new lines, and possesses many features that commend it to mill men. The saving in material alone will soon pay for the machine. The output of a mill with this machine can be increased by one-third. It is best adapted for medium-sized or portable mills that cut from 5,000 to 25,000 feet of lumber per day.

SAWS—This Edger is fitted with either two or three saws as required. The saws are 16 in. in diameter, and 10 in. gauge. The greatest distance between saws is:—Two saw machines, 24 in.; three saw machine, 20 in., the least distance between saws, 2 in.

DRIVE PULLEY—The Drive Pulley is 9 in. x 9 in., affording a good belt grip, and is supported by an outside bearing.

SAW ARBOR—The Saw Arbor is made of 2½ in. steel, and has very wide bearings.

ATKINS STERLING QUALITY SAWS

ATKINS REPAIR SERVICE DEPARTMENT

We make a specialty of all kinds of repair work. This branch of our business has assumed large proportions.

With improved machinery and appliances, expert workmen, careful attention to details and prompt return of work, we are prepared to guarantee absolute satisfaction.

With such a Service Department at hand, the user of Atkins Sterling Quality Saws is constantly protected in case of accident, or when natural wear and tear necessitate overhauling or the replacement of parts. We stand ready to help our customers in this way at lowest cost with maximum efficiency. At your next opportunity we should like to show you what we can do for you in the matter of repairs. Use Atkins Sterling Quality Saws and reduce these repairs to a minimum. "We stand by our slogan in keeping Atkins always ahead."

The Filing Room—The Great Southern Lumber Company

Ten Aloxite Saw Gumming Wheels Grind 192 Saws in Twenty-four Hours in one of the Biggest Mills in the Country—

DOWN in Bogalusa, La., is the big mill of The Great Southern Lumber Company. Every twenty-four hours they cut thousands and thousands of feet of lumber—night and day they are at it—there is no let up. So it is up to the filing gang and Aloxite Saw Gumming Wheels to keep the battery of saws on the job.

And they surely do!

On ten machines, Aloxite wheels, on two

shifts grind fourteen band saws forty-four feet long; one hundred and twenty-five eight-inch gang saws; thirty-six twenty-five inch edgers; six forty-nine inch slasher saws; ten thirty-inch trimmers and one seventy-two inch cut off saw.

And they say that every wheel cuts clean and fast—cuts cool—holds its shape—literally helping to make it possible for this great mill to keep up its enormous production.

Reduce Your Haulage Costs

A "Bell" Geared Locomotive Will Do It

The haulage end of your lumber operations is an expensive one. Expensive because of fuel, frequent repairs and breakdowns, due to faulty equipment. In addition, how many thousand feet of timber have you lost through fires caused by sparks and ashes from your engine?

To reduce the operating expenses, to guard against unnecessary breakdowns and repairs, to eliminate

the fire hazard and to provide an efficient means of haulage many lumbermen have equipped their camps with the "Bell Locomotive." This little giant is a marvel of tractive power which has "made good" in the lumber industry of Canada. It is something you should know about if you are not already acquainted with its capabilities. May we send you the information?

Harness That Stands Up

During the Spring and Summer—work in the bush or in the lumber camp undoubtedly puts more strain on the harness than in Winter time. For the earth is not then covered with an extra mantle of snow to act as a lubricant.

So, why not get the best there is for your horses and get the most out of them by equipping them with a harness and outfit that will stand all strains?

"Carson Quality" Michigan Lumber and Skidding Harness is that kind of a harness. It is made on honor from the best oak tanned leather by skilled makers.

Hugh Carson & Co.
LIMITED

OTTAWA, CANADA

P.S.—We handle everything in horse equipment. Let us know what your requirements are and ask us to send you a catalogue and full particulars.

A Mill to Suit Your Needs

The Bertrand Circular Sawmill shown below is a practical model that has been a favorite among millmen for many years. Each season finds it making new friends in all quarters of the country and under widely varying conditions. And we have yet to hear of a case where it has failed to do everything we claim for it.

The materials which enter into its construction are of the best and each part is thoroughly tested before leaving our hands. The general design and construction of this machine is the work of practical sawmen of many years experience—which is your best guarantee of ultimate satisfaction.

Our line of sawmill and woodworking machinery includes planers and matchers, buzz planers, band-saws and resaws. Write for booklets.

GLOVES & MITTS

Well Known in the Lumber Camps

There must be more than ordinary quality in a work-glove to stand the lumber-camp test. The lumberman does not handle things gently—he works. And he wants a glove that will work with him. He has found such a glove in the TAPATCO Brand—and he likes it so well that thousands of these gloves go into the woods every year to help bring in the logs.

The styles the lumbermen like best are our heavy weight Canton Glove and the leather-faced glove which we make for heavy service.

"TAPATCO" COLLAR PADS Keep the Horses Fit

A Pad so well made that it gives long service—with hooks so secure that they do not work loose. Use these pads to protect the necks of your horses. They prevent friction and so remove all possibility of sores, galls, and chafing.

34-inch Heart Brand three-ply belt in use at the plant of the Fredonia Portland Cement Co., Fredonia, Kansas.

An Easy Way to Save Money

A product which doesn't conform to exact specifications can't pass inspection in its own factory. A fraction off standard measurement will condemn an expensively made mechanism.

Although manufacturers are jealous in the inspection of their own products, they are losing dollars because they have not applied the same rule to the transmission of power in their factories.. It's a losing game to let the eye, or guesswork, judge the efficiency of a belt's work. That is an engineering matter for a belting expert.

The Graton & Knight Standardized Series of Leather Belting, which contains the **one right** kind and size of belt for every class of drive, is a series standardized in its manufacture and in its application.

High quality leather belting put to work on an exact engineering basis means the highest economy in power transmission.

Graton & Knight belting experts will be glad to extend their services to any belt user who questions the present efficiency of his power transmission. G & K experts are men trained in the G & K laboratories and by long service in the field.

Write for our book "Standardized Leather Belting."

The Policy Behind the Goodyear Cord Tire Built This *Better* Hose

MORE motorists would not be riding on Goodyear Tires than on any other brand, if Goodyear scientists had been satisfied with orthodox methods of tire building.

Neither would Goodyear Industrial Hose possess the qualities that enable it to give longer, more satisfactory service, if old-fashioned methods had been followed in its construction.

Modern industry's methods were studied exhaustively to ascertain the conditions industrial hose must meet in use. Then new formulae were created, new and more exacting standards set—resulting in a better hose, capable of standing up under the severest service.

The long service given by Goodyear Air Drill and Goodyear Pneumatic Tool Hose in mines, quarries, shipbuilding yards and structural work—where it is dragged over rocks and steel girders, beaten by ore and building materials—is evidence of the thoroughness of construction of all Goodyear Industrial Hose.

The cover on any air drill or pneumatic tool hose is prominently responsible for the life of the hose. The extra-heavy cover of tough, white rubber on Goodyear Air Drill and Goodyear Pneumatic Tool Hose resists wear and greatly prolongs the life of the hose.

Inside this hard-wearing cover is a special, oil-resisting inner tube, and a fabric of such strength that five-ply is found as satisfactory as six or seven-ply of old-style hose.

Records of Goodyear Air Drill Hose giving from 18 months to 2 years' service are in our files. We have similar records of long, satisfactory service and lessened hose costs, due to the use of Goodyear Industrial Hose in other classes of work.

Let a Goodyear man specify the particular kind of Goodyear Industrial Hose that will lessen hose costs in your plant. No obligation. Phone, wire or write the nearest branch.

Oldest and Best

HOE

Chisel Tooth Saws Choice of Lumbermen Everywhere

The even temper of these saws and the fine quality of steel from which they are made have proved Hoe saws reliable for nearly one hundred years.

More than one hundred thousand "Hoes" are to-day successfully sawing lumber in all parts of the globe. The Hoe Chisel Tooth Saw, invented 40 years ago, is still the best for cutting hardwood.

Special Flanged Shanks and Superior Bits Supplied

R. HOE & CO. 504-520 Grand Street New York City

America's Oldest Saw Manufacturers

Rubber Goods FOR LUMBERMEN

Belting Our long experience in the making of Rubber Belts enables us to specialize on this line. "P.M.S.," "Special Drive" and "Lion" are our leading brands for power transmission.

Packings "Redstone" High Pressure Sheet Packing has proved by test that it will outlast any other similar packing on the market. We make Spiral and Ring Packings, etc., that are equally reliable.

Hose for Steam, Water, etc., in various grades, made especially to give satisfactory and economical service under different conditions.

Fire Hose One or more of our twenty brands of Fire Hose will be found, not only in the best equipped Factories, Mills, etc., but in almost every Fire Department in the Dominion.

LUMBERMEN'S

EQUIPMENT

Our No. 40 Heavy Duty Steel SAW CARRIAGE

Known Throughout the Lumber Industry

An unusually substantial carriage and one that will give a long, continual service.

All parts are made from the best quality materials and the whole arrangement designed and constructed to ensure a smooth operation.

This carriage can be equipped with steam set

works attached to either our No. 3 or No. 4 set. We also furnish it with any number of head blocks or axles. The knees recede 40 inches from the saw line.

Our catalogue gives full specifications. May we send it?

Steel Carriages

**Over 450
Waterous
Carriages
Installed in
Canadian
Mills**

WATEROUS Steel Carriages are being used in the largest, best equipped Mills in Canada to-day. Built for fast cutting, for accuracy, and to give operating service, they are carefully put together of the best materials obtainable—they stay right.

Increase in cutting efficiency and the increase of cutting speed have been taken care of in the design of these carriages. Improvements in the knee and head blocks and in all moving parts to overcome lost motion; a new setworks—our No. 4—(which may be attached to Steam Setter, or be replaced by trout Power set works) which absolutely prevents and will not develop slack; new style, inserted tooth; quick and easy operating dogs; a friction receder that is operated with the Setworks—these special features are what keep the Waterous Steel Carriage at its place at the head of the list of "Up-to-date Sawmill Equipment." We build our Steel Carriages in sizes of 36 in. to 72 in. knee opening, in any length and with any number of head blocks—screw or rack motion. They are adaptable for rope or gunshot feed.

Waterous

BRANTFORD, ONTARIO, CANADA

LOG LOADING

Use your motor truck for this work by installing a BAY CITY WINCH.

You can load your truck or a trailer without other power than the truck engine. It saves time, money, men and labor.

Bay City Foundry & Machine Co.
1601 Water Street
BAY CITY, MICH.

Not altogether what we say, but what users say

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a barge containing 60,000 logs, in calm weather, 30,000 in a head wind.

West & Peachey - Simcoe, Ont.

Sole Manufacturers of the Celebrated

"MAPLE LEAF" BRAND Stitched Cotton Duck Belting

Strong Durable Economical True Running

Being thoroughly water-proof, it is equally good for running in wet or dry places. As a main drive belt, "MAPLE LEAF" cannot be excelled, and for conveyors it is in great demand. A trial belt will convince you.

**THESE EDGES**

are composed of indestructible strands interwoven with the solid body of the belt.

The Best Belt is the Cheapest

*Endurance is the test
on the heavy drives*

"GRIPOLY"—the solid woven belt composed of 85% pure camel hair and 15% best long staple cotton, equipped with patent indestructible edges which cannot fray is unquestionably the most powerful belt made.

Look at these tests, made by David Kircaldy & Sons, on various makes of belting—they speak for themselves,—

6 inch wide ordinary WOVEN HAIR belting broke at	7,736 lbs.
6 inch wide 8 ply STITCHED CANVAS belting broke at	6,811 lbs.
6 inch wide DOUBLE LEATHER belting broke at	3,572 lbs.
6 inch wide PATENT "GRIPOLY" Belting broke at	14,907 lbs.

What we mean by QUALITY

Practically all our White Pine comes from Northern Ontario where climatic conditions, soil, water, etc., all lend themselves to the growth of as fine a quality of White Pine as can be grown anywhere.

The Clear and Shop is of a soft corky nature, while the Common contains a sound red knot, very little black knot defect being found.

Your own interests are best served by buying this class of material—it means satisfaction.

Mills at: - SPRAGGE, ONT. & BLIND RIVER, ONT.

"There is Only One G. A. Grier & Sons Ltd."

—a name synonymous with quality

Quality counts in Lumber—today more than at any other period—counts more with the customer, because he realizes its true economy—counts more with the merchant because he knows that ultimately it is only quality lumber that will bring his customers back. Counts more with us too, because dealer and customer satisfaction is what we have based our business upon and our success is wrapped up in that one word "Quality." Our

**Hemlock, Spruce, Pine, Hardwoods
B. C. Lumber and Timber**

represent the finest in Forest Products. A trial order in any or all of them would convince you of their business possibilities. Let us hear from you.

WIRE YOUR ORDERS AT OUR EXPENSE

209 Winch Building,

VANCOUVER, B.C.

Many Eastern Canadian Firms have never used either WESTERN SOFT PINE or WESTERN YELLOW LARCH.

The extremely heavy demands for lumber in 1920 may force them to use these woods. We hope so, and also that some of our product may be available, for we know we will then have made many life long friends.

How to Reduce Costs of Building

Buy our "Utility" grades of Siding (made in Sitka Pine or Fir), and Flooring (Fir only). They effect a 20% saving. They satisfy the contractor because no extra labor cost is necessary and consumers appreciate the receipt of maximum value for their dollar. If you have not used "Utility" grades, write us —no others produce them.

British Columbia

RED CEDAR

SHINGLES

—the standard on this continent for economy and satisfaction in roofing or siding.

—gives a weather surface which for durability and artistic appearance cannot be equalled by any type of building material on the market.

Our shingles are made from selected material—the giant red cedars of British Columbia—the finest stand of red cedar in the world.

Our shingles are made right—Our grading rules demand "Vertical Grain"—"Strictly Clear"—

"Free from Sap"—regulations which assure you of a product that will give the highest satisfaction.

Write us for a supply of our Dealer's Booklets—literature which gives just the facts about roofing and siding your customers want to know.

MILLMEN

and others interested in Steam Power Plants

Whether you contemplate building a new or repairing your old power plant it will pay you to investigate our recently patented **Steel Water-Jacket Furnace**. This brickless furnace is built of heavy steel plates, spaced apart, forming a water jacket all around, carrying same amount of steam as boiler. Splendidly adapted

for use of portable mills as it is easily moved and placed in position. Burns sawdust or mill refuse of any description, while at the same time it generates one hundred per cent. more steam than will any other type of furnace. Conforms to any style or type of boiler, either straight draft return or water tube.

SIMONDS

Circular Saws

For the mill or woodworking shop saws that stand up to the work are a source of gratification to the filer or sawyer. It is safe to assume that the mill owner or operator will be the first to appreciate the economy of such saws. Less repairing and fewer delays mean the cutting of lumber costs if the saws

cut the lumber as do Simonds. Our Inserted Tooth Rip and Cut-Off Saws are leaders in their field. They are economical because the teeth, which are renewable, stay in the plate and are strong and durable. Simonds Solid Circular Saws have long set the standard of Quality and Efficiency.

Write us about your requirements

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice, at Buffalo, N. Y., under the Act of Congress of March 3rd, 1879.

Why Should Lumber Bear the Blame?

The value of well-directed, effective publicity for the retail lumberman, particularly in the columns of the daily and weekly press, has been emphasized many times in the "Canada Lumberman." That more attention is being directed to this phase of merchandising, is evidenced by the consideration which Retail Associations are giving to the subject.

At the annual meeting of the South Western Ontario Retail Lumber Dealers' Association, Chester H. Belton of Sarnia, delivered a brief and stirring address in the interest of publicity on the part of the yard man. He drove home the wisdom and necessity of the lumber dealer getting away from the idea that there was no apparent need for him to use printers' ink and answered the plea, often put forward by handlers of forest products in the smaller centres, which is "Why should I advertise? I am the only one in my community selling lumber and people will come to me anyway when wanting something in my line." Mr. Belton pointed out the secret of advertising was to get a customer to feel that he needs what the dealer has, and if more callers are induced to come to the office and yard the result is a larger and ever-widening trade.

There are other phases of the question which might be touched upon. In connection with the high cost of building, furniture, etc., a great deal has been said about the alleged exorbitant price of lumber. Many retailers have been quite content to sit down and rest quietly under the charge. Lumber has been getting all the blame for this extra cost in building and furniture in spite of the tremendous increases in quotations taking place in brick, hardware, glass, plumbing, cement, tile, labor, etc. Lumber in reality constitutes only a small part, but "passing the buck" has been a favorite pastime of late, and the dealer has had it passed on him too long without any protest or complaint. It is time for the latter to arouse themselves

and explicitly inform the public where they stand in this important matter. Lumber should no longer be "the goat" for all the high prices.

The following article, which appeared in a recent edition of "Lumber," furnishes an illuminating incident of why the trade should tell the people through the medium of the press, leaflets, booklets, etc., the exact truth.

A prominent manufacturer of hardwood lumber priced some rather luxurious chairs in a furniture store of a western city a few days ago. The price named on a chair that he wanted was about one hundred dollars. As this was somewhat higher than he had expected to pay he asked some questions as to the high prices. The salesman immediately explained that the "high price of lumber" had made a big advance in chairs of this kind imperative.

As a matter of fact, the chair in question contained six or seven superficial feet of lumber—plain oak of good quality—for which the sawmill man had received, at an outside figure, about \$1.50 to \$2.00. Doubling this figure to cover the cost of reworking and finishing, the cost of the wood in the chair to the furniture manufacturer could hardly exceed \$4.00.

Granting that the price was not excessive—and the furniture dealer insisted that it was quite moderate—it is quite evident that the item of lumber entering into the chair's construction was the smallest element in the advanced cost. Yet the dealer argued the advance in lumber costs as the CHIEF reason for his higher priced chair.

It is quite possible that the furniture dealer was sincere in his statements; that he believed that the advance in cost of the chair to be due principally to higher-priced lumber. It is even possible that the manufacturer had suggested this "talking point," shrewdly taking advantage of the very active propaganda against "lumber profiteering" that has emanated from the United States Senate—and other high places—in recent months. A "talking point" of this kind is effective, for the reason that wood bulks large in most articles in which it is used. Few persons outside of the lumber trade will realize, as did this manufacturer of hardwood, the really small quantity of the product, as lumber is measured, that is contained in a given manufactured article.

No one in the lumber trade will deny that prices have been, and are, higher than formerly; possibly they have been too high on some items—but every lumberman will resent his product being made "the goat" for advances that have occurred in other materials. Certainly he will emphatically resent the imputation of blame for price advances on articles in which his product forms an insignificant three or four per cent. of the retail price!"

Where Much Work Is Yet To Be Done

The subject of forest fire protection has been so freely written about that it is almost threadbare. But it is of such paramount importance to the lumbering industry that we make no apology for again referring to it. Every season we have to record the destruction of hundreds of thousands of dollars' worth of standing timber, and this year already reports are to hand of serious fires in the Maritime Provinces and also of fires in Quebec. In view of the dwindling amount of Canada's forest wealth, we cannot afford these ever-recurring fires, and it is imperative that further steps be taken to minimize this destruction of property.

The world is looking to Canada for its supply of pulp and paper, commodities which are of greater value than ever before, and give this country a trade opportunity which has not been within her reach for many years. That opportunity can only be fully realized if we conserve our valuable resources. The fires which devastate immense tracts of our forest lands involve the limitation of that industry, and also of course the depletion of our supplies of commercial lumber.

The forest protective associations have done splendid work, but considering the area of our forest lands, the work is quite limited. There is a vital necessity for more associations, for more educative work as to the financial losses which we are yearly suffering, and

for heavier penalties on those who wilfully perform acts which may and do lead to these fires.

Notwithstanding the propaganda work of the Forestry Association, there is an immense amount of ignorance regarding the destruction wrought by these fires, and until the co-operation of all interested—limit holders, lumbermen, settlers, hunters, etc.—is secured, we shall have to record, year by year, the wiping out of wealth which cannot be replaced for many years and represents a loss not only of the trees but of the employment which would have been necessary to convert the raw material into manufactured articles, and of profit to pulp and paper companies, lumbermen, wholesalers and retailers.

Higher Rates Do Not Deter Trade

The agitation against the increased Montreal wharfage rates has ended in smoke. Lumber is an important item in the exports of the port, and lumber merchants were, therefore, considerably interested, especially as the new schedule is based on higher lumber rates. It was originally complained that the increased rates would, generally speaking, prove detrimental to the interest of the port by diverting trade to competitors, but according to the Harbor Commissioners this has not proved to be the case, and New York firms are using Montreal much more freely for sending exports to Liverpool.

A committee of the Board of Trade after negotiations with the Minister of Marine agreed that it would be necessary to obtain an additional \$225,000 to meet increased operating and other costs of the harbor, and the agitation then took the form of an alleged inequality of the distribution of the increases. Even the new schedule will not meet all the requirements necessitated by the higher cost of operation, but it is hoped to effect economics in other directions so as to make the budget balance.

At a meeting of the Board of Trade on June 2nd, the matter was discussed at great length, and a resolution was moved in favor of the Minister of Marine being asked to distribute more equitably the charges in order that "certain serious discriminations in the new tariff be eliminated." Mr. W. G. Ross, Chairman of the Harbor Board, met this motion with an undertaking to receive any representations as to any inequalities in the tariff.

The discussion was very lively, and brought forth the statement that there was no necessity for the members having been brought together to go into the matter. The result was that the motion was withdrawn, and it is now left in the hands of the Harbor Commissioners to deal with individual complaints as to the new charges.

Editorial Short Lengths

If the merger business continues to flourish in the future as in the past, many small businesses may be "submergers."

* * *

It is announced that the Quebec Government will extend its efforts in the direction of airplane service considerably as a result of recent forest fires. The eastern province has always been to the forefront in the work of safeguarding her wooded assets.

* * *

Will somebody please appoint an official interpreter to tell the lumbermen where they are at in the matter of the new federal tax? So far the provisions of the regulations are about as clear and illuminating as a patent medicine testimonial.

* * *

It is announced that the Ontario Government will refuse to issue permits to cut timber in either a small area or a large one and that the policy has been adopted to offer timber for sale by tender. It is intimated that since inaugurating this regulation, the department has received in some cases from 50 per cent. and in others 100 per cent. more than under the old method of issuing permits. This is a progressive move and it is to be hoped that the new colors which have been nailed to the mast will be kept flying for a long time, ir-

respective of friend or foe. "A fair deal and a square deal" instead of "a long pull, a strong pull—and often a political pull."

* * *

The forest fire is still the worst enemy of Canada's timber wealth. The recent dry spell demonstrated in New Brunswick and Nova Scotia and also some parts of Ontario and Quebec that many more radical moves and aggressive steps must be taken in the way of forest protection and conservation before this arch fiend is conquered. Like Banquo's ghost, it will not down.

* * *

The cost of the floor of the new House of Commons at Ottawa which is of teakwood and ebony was \$2,955. This information was given in the chamber by Hon. J. D. Reid, acting Minister of Public Works, in reply to a question by Mr. J. O. Brouillard of Drummond. It was explained the wood had been imported from India with small ebony strips and was purchased from wholesalers by the contractor who manufactured and laid it.

* * *

While in the lumber arena the demand may have slackened off to a certain extent, still there is no reason why pessimism should find a foothold. Everything is bound to come out alright in the end and the present is only a temporary halt on the road to further progress and development. The upheaval in conditions caused by five years of strife is not going to be remedied and restored in a year and a half. The leavening process is operating and with confidence and co-operation everything will come out alright.

* * *

The crying needs of the country to-day are industry, thrift and education, although certain municipal, provincial and national authorities would, by official decree and otherwise, lead the public to adopt a totally different attitude. Judged by recent events, what Canadians really and truly require are a few more tag days and public holidays, three of the latter having occurred lately within as many weeks. Much is heard about the urgency of greater production. How is this to be brought about when all the world apparently wants to sit on the fence and see the procession go by?

* * *

Every form of business depends more or less upon lumber and no other material lends itself to so many uses. The beauty and comfort of our homes, the very existence of our railroads, the economical handling of manufactured goods, the benefits of a free press—the entire prosperity of the nation, in fact, is built up on a plentiful supply of this most necessary material. Within a century, the forests of the United States have been reduced from 850,000,000 acres to 150,000,000. All persons are consuming lumber at a greater rate than ever before. Replanting is a matter of years, while our vital need is to protect our present supply. Conservation and preservation must join hands.

* * *

At the recent session of the Ontario Legislature J. W. Curry, K.C., formerly Crown Attorney for Toronto, made a rather sensational statement to the effect that there was a ring of multi-millionaires, who met from time to time in Toronto, Ottawa and Montreal, to fix the price that the public must pay for pine and other lumber. Probably Mr. Curry has heard of the Canadian Lumbermen's Association, the Wholesale Lumber Dealers' Association of Toronto and the Montreal Lumber Association, and the mere mention of the word "Association" was enough for him to hurl the malicious charge. Representatives of the "Canada Lumberman" and prominent speakers from outside of the lumber ranks are present at the sessions of these bodies and never at any of them has the question of price regulation or control been considered, arranged or "fixed" in any way, shape or form. The allegation of the member for South Toronto is both false and unjust—a mere creation of the imagination or a cheap political pose for the gallery.

Busy Plant Now All Housed Under One Roof

Complete Unit Operation of Beaver Wood Fibre Co. at Thorold, Ont., Makes for Increased Production and Operating Advantages

The Beaver Board Companies having moved their Ottawa finishing plant or board mill to Thorold, there is now at Thorold a complete operating unit, where spruce logs are being converted from wood to Beaver board all under the same roof. A complete unit operation makes not only for increased production and operating advantages,

Barking room where bark is removed from non-rossed logs and 4-foot logs are cut into 2-foot lengths

but a decrease in labor, shipping and freight charges as well as a great reduction in scrap and waste costs.

The plant and operation of the Beaver Wood Fibre Company, Ltd., is one of the largest on the Niagara frontier. The holdings now include a complete ground wood fibre mill with 18 grinders and 2 cylindrical paper machines, a complete finishing plant or board mill, a black board factory, varnish plant, power plant and a new sales and administration office. The company recently constructed seven single and seven double employees' houses. These are of the latest improved construction and have all modern improvements.

The methods employed at the present time in the manufacture of ground wood have changed but slightly since 1867, when the process was first introduced. The size and capacity of the grinders have been increased and the methods of manufacture vary in the different mills. The varying factors in the mills manufacturing ground wood are the amount of horse power used, grinder cylinder pressure, size of stones and peripheral speed.

The ordinary grinder stone is 54 in. in diameter by 27 in. face, however, some stones are as large as 60 in. in diameter and 48 in. face. Formerly only natural quarried stones were used but now many mills are experimenting with artificial stones. Ordinarily the grinding is carried on under conditions of high temperature and only a

small quantity of water being dumped to the pit of the grinder. In Europe the cold grinding process is largely adhered to and is often used in this country, where an excess of water prevents any heat.

Of the several woods used in the manufacture of mechanical ground wood board, spruce is far superior, for it is more easily worked up and makes a higher grade of paper. Spruce gives about the highest yield of any wood used in the mechanical process. It averages 2200 to 2300 pounds per cord of pulpwood. It has excellent color and a long, strong fibre. Spruce can be ground under practically any condition of speed, sharpness of stone and grinder pressure. A haphazard method sacrifices the quality of board manufactured.

In the manufacture of wood board from hemlock a larger amount of power is required and the wood must be small in diameter and of a very good quality. The fibres are short and the board has a reddish tinge. Eastern hemlock yields about 2,000 pounds per cord and makes a board satisfactory for news print purposes, even with the handicap of short fibres.

The balsam fir in the green state furnishes a fairly good pulp even lighter in color than spruce. Seasoned balsam usually shows decay and insect attack and results in a board containing many shives and is soft. It yields, on an average, about 1900 pounds to the cord, and a fairly sharp stone is generally used in grinding the green wood.

Poplar produces a brittle, dark and short fibre pulp. A large amount of power is required in the grinding. Poplar, however, is often mixed with spruce, where it proves very satisfactory. It yields a pulp of a very good color, although it is likely to contain black specks unless the knots are removed from the wood.

No wood, however, has ever been found which will equal the qualities of spruce nor the ease and latitude which are found in the manufacture of spruce into ground wood pulp. All pulpwoods in the green state produce a larger yield and a better grade of pulp

Jack-ladder taking logs out of the river at Frederickhouse, Ont., into the rossing plant and sawmill

than when seasoned and spruce is no exception to this rule. Spruce will continue to lead in the manufacture of ground wood pulp until the present supply is exhausted. Not until then will the other woods which are applicable to ground wood purposes be used to any great extent.

Pulp Producers Must Aid Publishers

Premier Drury said recently that he had heard nothing of the application for more pulp concessions for the Backus pulp and paper interests in Fort Frances, Ont. "I can say that they won't get any more unless they come through with a fair share of paper for Canadian publishers," said the Premier of Ontario. "We are taking up with them at present this matter of more paper for the Canadian publishers. In a letter I have just received there is no mention of any additional concession for pulp from them."

Two units at work. Both these machines take up the wet fibres at one end and mesh them together, dry and smooth them out into the finished single-ply stock which comes out the delivery end of the machine

Does It Pay Retailer to Operate Planing Mill?

Preponderance of Opinion from Representative Lumber Dealers Favors Project Particularly in Larger Towns—Others Declare Plant Not Necessary.

"To be or not to be" are memorable words in the soliloquy of Shakespeare's Hamlet on "Death." To own and operate a planing mill, or not, is a problem presenting more than a soliloquy for the average retail lumberman to solve. This question has loomed up pertinently of late by reason of the rapid advances in the price of machinery, the general restlessness of labor, the active house-building campaign, and the shortage of dwellings in every town and city. Like many modern business propositions, it opens up a wide field for argument and exploitation and allows the presentation of strong points both for and against.

Recently the "Canada Lumberman" obtained views from representative lumber dealers in all parts of the country relating to what they thought of the operation of a planing mill in connection with their yards. It was stated that, while such an adjunct may be profitable in summer time during the busy building season, it was generally conducted during the winter at a loss.

Considering that the plant is usually quiet for several months; that the upkeep and cost of equipment is on the increase and so much finished material in the building line can be secured in standard sizes, dealers were asked if a planing mill added in any way to the expansion, profit and service of the ordinary retail yard.

It was further declared that this was a particularly live issue at this juncture in view of the scarcity of help, high wages and the movement towards standard thicknesses and widths for mill work lumber and timber and standard designs for mouldings.

It is interesting to read the views of different retailers in various parts of the country. Some men, who have not a planing mill or have lost money through investing in one, assert it is a non-essential part of their business, a sort of fifth wheel or an unprofitable adjunct. On the other hand, those who own a planing mill—at least the majority of them—declare that they are able to make it pay and cater to many new lines in the way of construction, contracts, etc., which they would not be able to do if they had to rely on the customary thicknesses and widths of mill work lumber.

Many lumber merchants say that if they did not run a planing mill in connection with their business, someone else would and carry off a large portion of their legitimate and natural trade. If they did not possess such a convenience and facility in their own town, contractors, farmers, builders and private citizens would go elsewhere for their supplies, and where they got their planing, matching, re-sawing, dressing, etc., done, there they would also purchase their lumber, lath, shingles, doors, sash, interior trim, flooring, etc.

There seems to be a consensus of opinion that in a town of only a few hundred population, there is scarcely enough business for a well-equipped planing mill, but in any place of fifteen hundred population or more, there should be a profitable trade for, at least, one establishment of this kind.

The Cost to Equip a Plant

To-day, outside of the building itself, to equip a planing mill that will do practically all classes of work, and to install electric power, shafting, hangers, belting, etc., will cost between \$8,000 and \$10,000. Of course, this may be reduced in some instances as a great deal depends upon the locality and the class of customers served.

A leading representative of the industry states that a man, who is thinking of establishing a planing mill, should possess, at least, a standard swing cut-off saw, 24 in. pony planer (side heads), 10 in. sticker, variety saw table for ripping and cross-cutting, a two-spindle shaper, 36 in. band saw, 12 in. buzz planer, a chain mortiser, single end tenoner, with copes and cut-off saw attachment, a post borer, etc. These, together with a 50 horse power motor, which would be requisite to run the machines, along with a complete blower system and other accessories, would entail an expenditure of about \$10,000. Such an equipment would enable a man to do practically every class of work with the exception of manufacturing doors in quantities. He could take contracts for all kinds of trim and virtually every class of building. With the foregoing or similar installations he could undertake stair work, newel posts, mouldings, window frames, door frames and all other kinds of jobbing in the way of odd sizes, etc.

Another authority declares that the investment for a planing mill depends entirely on the locality to be served. While many la-

bor-saving machines might be desirable, a person should not install equipment that will be required only occasionally. There are many suitable machines that should be included in all planing mills and there are others which will come in handy and cut costs in certain operations and specific jobs, yet the planing mill owner should consider carefully before installing these latter machines. He should not put them in for occasional jobs; only where he can see sufficient work to keep them employed, at least, 50 per cent. of the time, should he make the investment.

Several combination machines, such as a variety saw, including boring and mortising attachment, might be installed if there is not sufficient work to be had to warrant a disbursement necessary to purchase individual machines. In the way of mechanical equipment, a man should limit his outlay to the needs and requirements of his district and the amount of prospective business or trade, likely to develop within the next few years. A retail lumber dealer who does a turn-over of only a few thousand dollars annually, would not be wise if he invested in an equipment that practically equals the amount of his yearly receipts. In building a planing mill he should take cognizance of future needs and make provision for additions to his installations as required from time to time in the development of his business. He should always add new equipment which will enable him to enlarge his service and work well in conjunction with standard machines already on the floor. Often the expansion of the small planing mill is hampered by the site occupied and the building erected. If enlarged operations prove a necessity, a new location must frequently be secured before such expansion can eventuate.

Various other features might be dwelt upon and while one authority believes that it would require \$10,000 to equip an average planing mill in a town of three to six thousand, another representative of the industry asserts that several things may be eliminated, such as the blower system, two spindle shaper, and post borer, and that a very air equipment consisting of a variety saw, swing saw, planer, jointer, 8 in. moulder, belt sander, band saw and 30 horse power motor, might be installed along with shafting, pulleys and belts for approximately \$6,000. Another item of interest to note is that prices on planing mill machinery of all kinds have been in the last year increased about 30 per cent. or since the outbreak of the war fully 100 per cent., and in some instances more.

Plant is an Absolute Necessity

W. J. Markle, sales manager of the Boake Mfg. Co., Toronto, says—In answer to your first question re operating a planing mill in connection with a retail lumber yard, it has been my experience that it would be very difficult to make a success of a retail lumber business without a mill. It would be next to impossible to carry stock to supply orders for the different kinds of dressed material you are called upon to supply. At the present time we have a large stock, and as well assorted as it is possible to obtain, and we find at least 25 per cent. of our orders have to be manufactured in some way or other. Consequently, until the consumer is educated to use what you have in stock (which in my opinion will take longer than our natural lives) a planing mill will be an essential part of a retail lumber yard. With regard to the slack season, to anyone having a fair trade it will require the slack months to get a stock of mouldings and trim ready to carry you through the busier months. With regard to a sash and door factory, not having had a great experience along that line I do not consider that my opinion would be an authority. However, I am under the impression that sash and doors should be a separate organization.

McGibbon Ltd., of Sarnia, Ont., say they could not operate in a place the size of Sarnia without the convenience and facilities of a planing mill, but in smaller centres they think this could be dispensed with as 90 per cent. of such mills probably do not give sufficient returns for the money invested.

Handle All Work in the Town

A. Menzies, of the J. H. Bowman Lumber Co., Limited, Dundas, Ont., writes:—My experience of over forty years in the planing mill and retail lumber business may not be a very good guide as an answer to your question, as in the three different places in which I have been employed there has been a planing mill in connection with

the lumber yard. Naturally I would be inclined to think that it does pay to operate a planing mill in connection with a retail yard. However, there are no doubt exceptions. I can well imagine that in a small town where perhaps little is done in the building line, a planing mill would not be a very profitable end of the business, but take the town of Dundas, for instance, with its large industrial plants which are continually using a good deal of planing mill work. I think this work can be much more profitably handled with a planing mill than sending out of town for it. I am willing to admit that the winter months are not profitable, but the summer trade and winter work, that comes from the various industrial plants situated here, makes it advisable to run a mill. The great difficulty in sending out of town for special items is delay in being able to fill the order promptly. I do not think, however, that a mill in a small locality—and not even in Dundas—should attempt to make doors or even sash as I do not believe it pays to do so. Here we do make the odd sizes, and occasionally small lots of sash. We always order from a sash and door factory for the stock lines. My experience here for the last ten years convinces me that it is necessary to run a planing mill department along with the lumber yard, particularly on account of being so near the city of Hamilton. If contractors had to go to the city for their mill work, they would naturally buy a good deal of their lumber at the same place.

Rip Saw and Planer Sufficient

George E. Lee of Taylor & Wells, Paris Station, Ont., thinks that the least investment tied up in a planing mill; the better, but that a rip saw and planer are necessary in order to be able to deliver lumber in the shape and sizes required; otherwise the dealer would have to carry very large stocks. So far as a sash and door factory is concerned, this has become a line of its own and in order to pay for investment, business must be done in a wholesale way.

James Sheppard & Son of Sorel, Que., are of the opinion that the retail lumberman loses a good deal of money if he fails to have a planing mill in connection with his yard. While it is true the winter months are not paying ones, there is always some work sufficient to cover upkeep and the time of men, so far as the experience of this firm is concerned.

Poor Paying End of Business

Wm. Saunders, of Dutton, Ont., says he has given considerable attention to the subject of a planing mill in connection with a retail lumber yard, and he is satisfied that it is a poor-paying end of the retail lumber line. "But I do not see," he declares, "how we are going to get out of it. Where one's trade is largely from the country as long as people have timber of their own they will want it worked up, even though the cost is more than they could purchase it for. The majority of planing mills in small places are old plants, and consequently the machines are too slow to compete profitably with modern equipment. Some tell us to put in up-to-date machinery, but what is the use when you can get nearly all the lumber you want dressed and worked up for the same price as you can get it in for the rough. I have no desire to stop running a planing mill but I am convinced that the sooner we get out of it, the better for the retail lumbermen especially, when we have to pay from 50c to 80c an hour for labor and keep men employed. For a retailer to do this and make any money out his help, he has to keep going some. I am glad this matter is being discussed by the "Canada Lumberman," as it is a particularly interesting topic to the men who live in the smaller villages and towns."

Not Worth the Worry and Trouble

George N. Kernohan of the Kernohan Lumber Co., London, Ont., is quite emphatic in his statement that a planing mill is not a necessary adjunct to a successful retail lumber business. Mr. Kernohan has two large yards in the Forest City and has developed a splendid business during his thirty years' connection with the industry. Discussing the matter recently he said,—"I do not see any advantage whatever in owning a planing mill. For some years I operated one myself and lost considerable money in connection with its management and upkeep, and since then I have got along much better without the worry and responsibility of a mill. There is a woodworking plant near our yard which meets any facilities that our customers demand or require. There is much material that can be secured dressed and delivered at a less figure than one can buy it for in the rough and then have it surfaced. The idea of a planing mill does not appeal to me at all. I am convinced that I can purchase matched material and save enough in the freight charges to more than counter-balance any expenditure I would be put to by getting it in the rough and having the product go through a planer, all of which means more help, extra handling, delays, etc. I have gone into this question quite fully, and, as far as I am concerned, I can not see that there is any necessity for conducting a planing

mill. I am strongly in favor of any movement towards standard thicknesses and widths for mill-work lumber and timber and standard designs for mouldings."

Mill Reduces Size of Stock Carried

A. Henderson of Cheltenham, Ont., on the other hand, contends that a planing mill is a valuable asset to a retail lumber yard, and here are his reasons:—"A planing mill, like all other factories, is run to pay dividends, and why not manufacture your material and reap the dividend, while at the same time you are adding another industry to your town. The dealer, who has his own mill, is able to give better service to his customers than the one who has not the mill; for instance, if you have to order a few odd sized sash or doors, you might wait for three or four months, before you could get an odd sized order filled at any of the large mills, whereas a millman can fill that part of the order along with the rest. What suits one customer does not suit another. One man will want all his siding, flooring, etc., d2s and matched, while another will say "Just dress 1s, as it leaves it thicker and will be stronger; the same with dimension stuff, as some prefer saw-sized studding and joints, to having them d1S1E. I have found out, since starting the mill, that you can work up all ends or cuttings, which otherwise accumulate around the yard; especially if you do contracting along with it. I have also found that I can handle the same amount of business with less stock. For instance, you buy a car of pine—siding, V. joint and flooring—and you have a heavy run, on one of them, say the flooring, and it is sold out, but you have a good stock of the other lines. It means you buy a full car of flooring, then you are loaded with lumber, where if you manufacture your material, you could be still doing the same amount of business with far less stock. It also has a tendency of keeping away from the mail order houses, especially now, with the Farmers Co-operative organization buying so much of their material through mail order houses. When they know they can buy a pair of sash or a screen door, supposing it is an odd size, made up, with a day's notice (or if it is really a rush order that they can take it home with them), it all holds the trade you have."

Mill is Detriment to Retailer

A leading retail lumberman of Hamilton says.—I believe it would pay a retail lumber dealer (if he were in a position to do so), to buy a stock of mouldings and dressed lumber for stock, rather than run his own mouldings or dress his own lumber. It might have been alright a few years ago, when one could buy, say a carload of mill culls, and pick out quite a percentage of strips, suitable for mouldings and dressing, but that time has gone, and there are no pickings now to amount to anything. We have run our mill all winter on a ten hour day, but at a loss, and just when we had hopes of picking things up through the summer, along comes the big demand for increase of wages, and personally I feel like closing my mill. There is not a doubt in my mind, but that it adds to the service of the customer to run a planing mill in connection with the yard, but it certainly is a detriment to the retailer, for this reason, that a customer may buy a board either dressed or rough, then finds, he would like it just a little narrower, or he may want it put over the jointer, and dressed down by $\frac{1}{4}$ in. He does not expect to pay for a little thing like that, though it soon means $\frac{1}{4}$ hr. time, that the mill man has to pay for, which eats into the small profits, that are made these days. In fact, is there any profit, when the costs of lost time are taken into consideration? I might also add that I am in favor of uniform mouldings and dressed lumber and also standard size frames and sash. I have been in the building and mill work now for some thirty years or more, and can see no reason why every room in a house should have different size windows.

Difficult for Local Plant to Compete

T. Crockett, of Riviere du Loup, Que., says he does not believe a planing mill is at all profitable for a retail man, but that he thinks one or two small machines, run by electricity, to look after the odd work that turns up, would be a great convenience. Mr. Crockett adds there are so many large woodworking plants to-day that manufacture all kinds of dressed lumber, sash, doors and mouldings, in such large quantities, that he does not believe any small local plant can compete with them. All kinds of finished materials can be shipped from these mills on short notice, so that it should not be necessary for a retail yard to keep a large stock of any of this material.

J. W. Hall, who handles considerable finishing material and lumber products at Edmundston, N. B., says that, while he does not consider himself qualified to be a retail lumberman, still he believes in the principle of every man to his trade,—let the manufacturer manufacture and the retailer do the retailing. He adds,—“And I cannot see that additional cost to plant in the way of machinery and

buildings, extra help, teams, etc., can add to anything but the expense of doing a retail business.

Should Be Managed Independently

Harold Brownhill, manager of the Dartmouth Lumber Co., Dartmouth, N. S., states that he believes the retail lumber yard and the planing mill should be managed independently. If possible, the retail lumberman might have a controlling interest in the planing mill, or, failing that, a satisfactory arrangement regarding yearly requirements.

A. E. Solomon of the Kent Lumber Co., Granby, Que., says that he does not believe, in connection with the ordinary retail lumber yard, it is a paying proposition for the dealer to operate a planing mill, sash and door factory. Continuing Mr. Solomon says:—"In our own case where we do contracting as well, and are obliged to give employment to our men the year around. It helps out materially to have a shop, where you can place the men in bad weather and where they can earn part of their wage, that would otherwise be a dead loss. It also acts as a drawing-card for the lumber yard and other building supplies, that we handle, besides getting out our own shop work for contracts in the manner, and at the time required."

The discussion and consideration of planing mill operation in connection with a retail lumber yard will be continued in the next edition of the "Canada Lumberman" when the views of several more representative dealers in various parts of the Dominion will be presented. Many new phases of the problem will be gone into fully.

What Does "Carload" of Lumber Mean?

Considerable discussion was had a few weeks ago in a meeting between retail dealers and wholesale dealers, in Columbus, Ohio, over what is meant by a "carload" of lumber, and in the discussion it was brought out that there was a considerable difference of opinion as to what constituted a "carload" and also that it was the basis of many arguments and disputes, says the Bulletin issued by the National Retail Lumber Dealers' Association of New York.

It was the general opinion at this meeting, that the retail lumber dealer, in placing his orders, should not order a "carload" of any material unless in addition to that he specified the number of feet that he would consider as the minimum to be contained in that car, most of this to be arrived at by the kind of stock ordered and the average weight of the railroad car equipment.

We have just been advised by one of our prominent members, of an interesting case which he has had in Court on just such a proposition as this. This member ordered a "carload" of 12 in. No. 2 Board 10 and 20 ft. from a lumber manufacturing company in the South. When the order was finally shipped, after considerable delay, it was found upon arrival, to contain only 14,496 ft. The dealer immediately made a complaint and claimed that the car should have held 19,000 or 20,000 ft. as a minimum shipment. The shipper objected to this, but the dealer arbitrarily, in making his settlement, deducted \$40.00 for 5,000 feet of lumber at \$8.00 per M., which he felt was a reasonable price at that time. The result was that the manufacturer brought a suit against the dealer for the collection of the balance of what they considered was due them.

The Court rendered a decision in favor of the dealer but did not, however, permit the dealer to deduct the full amount which they had claimed, as the dealer was unable to show by the records of the manufacturers in the South, that the difference in price was more than \$5.75 per M., and the dealer was ordered to pay the difference between that and the \$8.00 which he had arbitrarily deducted, but the shippers to pay the cost of the suit.

The Interstate Commerce Commission has insisted and made rules that all shippers should not ship less than the minimum weight of the car, and the consignor who is guilty of shipping less than this amount is always subject to the regulations of that Commission, in addition to the ruling of the Courts.

In our opinion it is a dangerous practice to order merely a "carload" of lumber without specifying the number of feet which the dealer will accept as the minimum, and we believe this is a matter which dealers should consider very seriously and make a particular note of in placing their orders.

Methods of Developing Farm Trade

What we believe is one of our best methods of developing farm trade is that we offer a very substantial cash discount of 5 per cent. for spot cash, 4 per cent. if paid within ten days, 3 per cent. if paid on or before the tenth of the month following delivery. In this day and age all of our farmer customers have plenty of ready cash and nearly all of them avail themselves of this as it makes a substantial reduction in prices and closes up the transaction at once says M. S. Rudisill of Niles, Mich.

Another matter that we try very hard to follow is the matter of

service. When a farmer drives into our yard he is waited upon immediately and shown every courtesy that is possible; he is given plenty of help to load his load and thus his time is conserved by not being obliged to wait indefinitely for this service, or to load the material himself.

Along the line of this service idea we use truck deliveries. At any time during the season when a farmer is in special need of material, and is too busy to secure the same himself, we very gladly deliver it, charging him a small haulage charge. Many of our customers have found this a very satisfactory and money-saving service to them in the busy season.

Another help: In quoting material to all our customers we quote by the 100 board feet instead of by the thousand. We have noticed a great many times that this makes considerable difference.

We had one little experience in the fall of 1918 which might prove interesting. We had a very good farmer customer who had the misfortune to have all his farm buildings burn down and after figuring his new requirements for his buildings and eventually selling him the material we assisted him in forming a plan whereby all his neighbours were to make up a "hauling bee" for him and haul all his material at one time.

We arranged to have several teams, possibly ten or twelve, come in one day and secure all of his foundation material, such as cement, lime, etc. Within the next few days we determined how many teams it would require to handle the remainder of his building requirements in the lumber line, and succeeded in securing twenty-six of his farmer friends to agree to come in the same day to haul it.

We had everything arranged in the yard for quick loading of all of these wagons and had all of the twenty-six loads loaded before the noon hour, at which time we had arranged to feed all of the teams and took all the men together with the owner and some of our yard men to a noon luncheon together. This was in reality a service to our customer, but it also proved to be a great advertising feature for our lumber yard.

During the noon hour these entire twenty-six loads of lumber were standing in front of our place of business with tags as to where the material was bought, and one large sign on one of the larger loads of shingles read as follows:

SOLD OUT? NO!!

**Just Our 12th Barn Job This Season
THE NILES LUMBER CO.**

Upon starting out with these loads they were all directed to pass through the main business district and it surely caused some stir to see a parade of twenty-six loads of lumber in one string passing through the city. It has been the cause of a great deal of favorable comment from all of the gentlemen present, as well as many others who saw this demonstration.

According to the completed returns of the Dominion Bureau of Statistics for 1917, the value of the log production was \$115,884,905 and pulp and paper \$96,340,324. In that year the capital invested in log production was \$149,226,019 and in pulp and paper \$168,787,405.

Why Lumber is High in Price

In 1913 men's wages in the lumber industry were \$28 to \$32 per month; in 1919, they were \$70 to \$85 per month (both being in addition to board and housing), according to the New Brunswick Lumbermen's Association in accounting for the high cost of lumber.

In 1913, stumpage was \$1.50 and mileage \$8; to-day we pay \$3.50 stumpage, \$8 mileage and \$3.20 per mile for fire protection; also we have workmen's compensation for logging, river driving, rafting, milling and loading with a separate rate on each, and this still further adds to the cost; in addition, there is the heavy business Dominion war tax.

The logging engineer for one of the Montana districts of the Forest Service, as a result of an investigation in the larger band mills of the district, shows in detailed figures why manufactured lumber sells at \$40 a thousand feet or more though the timber is bought on the stump for from \$2 to \$5 a thousand. His report indicates that after the timber has been purchased on the stump at \$2 to \$5 per thousand, logging operations cost \$14 to \$20 a thousand. From the pond to the cars, including the manufacture of the rough lumber, the costs are \$11 to \$16 a thousand, these figures based on records from mills sawing 600,000,000 feet of timber during the season of 1919.

Provincial Pulpwood Regulations Are Right

Are Not Confiscatory in Character and Do Not Infringe on Vested Interests— Americans Are Misinformed by Prejudiced Interests About Embargoes

The Canadian Pulp and Paper Association recently sent out a timely and instructive Bulletin of thirty pages in defence of government restrictions upon the use of pulpwood cut from the Crown lands of Quebec, Ontario and New Brunswick. The booklet was issued from the headquarters of the Association in Montreal and is a reply to arguments advanced before the House Committee on Foreign Affairs at the late hearings in Washington on the resolution of Senator Underwood respecting the exportation of pulpwood from Canada.

The statement declares that the American viewpoint, as evidenced in Washington, is largely the result of lack of information and a misunderstanding of the facts, caused by listening to one-sided presentation of the case by prejudiced interests.

It is denied that any Canadian "embargo" on the exportation of pulp wood exists, it being pointed out that the Dominion Parliament alone has authority to deal with international commerce, and that Parliament has not acted in the matter.

The regulations affecting pulp wood cut on Crown lands in the three Provinces are shown to have been in existence for ten years and more; that they are neither confiscatory nor discriminatory in character, and infringe no vested rights.

The charge that property rights in the limits held by American manufacturers were in four days' time, made dormant and unproductive, is met by a reference to the record which shows that when the Quebec Government placed restrictions upon the use of pulp wood, the American manufacturers, in view of a protest made at that time, were asked to submit statements showing the quantity of logs on hand at their mills, as well as the amount hung up in the drives and in the upper countries, in order that the regulations might be suspended as applied to this wood. It is claimed that some of the companies' estimates, which were honored by the Government, were extremely liberal and carried not only the wood already made but all that they could hope to make for many years to follow. Further, it is said, the Government has been most liberal in accepting some of the companies' affidavits as to the origin of the wood they were undertaking to export and a reference to the export returns from Three Rivers and Batiscau, Quebec, is suggested as bearing out this contention.

Could Get Big Price for Holdings

Nor have the restrictions, as asserted, "deprived United States investors of their investments in Canada." They are only required, as a matter of provincial policy, to carry the raw material through at least one stage of manufacture, namely, into wood pulp or lumber within Canada. Stumpage values, it is asserted, have so greatly appreciated that the holder of any such license could, if he wished, readily realize a large profit upon his investment, by sale, or he may provide for the manufacture of the pulp wood into pulp or paper in Canada, as many United States concerns have done or are doing, including the International Paper Company, the chief complainant, to their undoubted profit.

It is claimed that the Canadian courts have already passed upon the claim of invasion of property rights, made by the American leaseholders and have decided against them, upholding the validity of the regulations.

It is denied that the regulations complained of are in any degree responsible for the present situation in the paper market, and it is declared that their removal would not lower the price nor enlarge the supplies of newsprint now available to American consumers, it being pointed out that no mills are now reducing production owing to the inability to get wood, and that manufacturing costs are lower in Canada than in the United States.

It is shown that so far from depriving the United States of Canadian pulp wood, wood pulp and paper, Canada is supplying one-third of the news print now used in the States, nearly four-fifths of Canada's total production, as well as the wood and pulp from which another one-third of the States' newsprint consumption is produced.

It is pointed out that the committee in Washington was informed that 63,000 tons could be accepted as the minimum by which production and importation of newsprint paper in the States last year fell below the exports of newsprint from the States to other countries amounted during the year to 110,295 tons.

Allusion is made to the fact that out of the total capital investment in the industry amounting to \$264,269,704 approximately \$180,-

000,000 is American-owned capital and it is stated that the perpetuation of Canada's sources of raw material, one of the chief reasons for the adoption of the restrictions complained of, is just as essential to these American investments as to the Canadian, and that they would be seriously jeopardized if the restrictions were lifted and unrestricted exploitation of Crown land pulp wood allowed.

Following Course of Lumber Industry

While admitting that paper manufacturers in the Eastern States are in need of increased supplies of raw pulp wood, it is shown that not all the United States mills are in any such dire extremes, that there are still large sources of raw materials untapped in the States and that if the paper industry is obliged to migrate from the East to the far West it will only be following the course of the American lumber industry.

Stress is laid upon the numerous advantages, not only to the less-ees, but to the ultimate consumers of paper to having the manufacturing processes carried on as near to the source of the raw material as can be done, the difference in the comparative freight charges for the carriage of a ton of paper and the equivalent quantity of raw pulp wood being very much in favor of the former.

The proposal to "retaliate" against Canada by stopping exports of coal and sulphur, on the theory that that would embarrass the Canadian paper manufacturers, is dealt with by the assertion "that such an action would necessarily cripple, at least temporarily, the manufacture of pulp and paper in Canada, and exports of these articles to the United States would, in consequence, be greatly decreased, if not shut off, for lack of production, quite without any action by the Canadian Government.

Coming to a discussion of the actual quantity of pulp wood available in Eastern Canada which, after all, is very largely the crux of the discussion, the statement denies in toto the claims of the Americans that the forest lands of Ontario, Quebec and New Brunswick could be opened to unrestricted use and not only without injury but with actual profit to the three Provinces.

Great emphasis was also laid in the argument at Washington upon a statement made by Sir Lomer Gouin that "with proper management" there might be cut from licensed Crown lands in Quebec four times or even five times more than the 1,000,000,000 feet per year being cut from such lands. This statement was construed in the United States to mean one billion feet of pulp wood species, which it did not. Moreover, his statement obviously refers to a possible condition in the more or less distant future.

The object of the association's statement is to show that the extremely optimistic assumptions of the claims made by the International Paper Company are not within the bounds of reason, and that any such wholesale increase in the rate of cutting as is advocated could only result in disaster to the Province and to many of the industries and communities dependent upon the forest.

The Resources of the Provinces

After reviewing in detail the available quantities of pulpwood in Quebec, Ontario and New Brunswick, and the annual cut, in which it is clearly shown that the roseate view of the Canadian situation, as set forth by the arguments at Washington, does not accord with the facts, the following conclusion is presented:

It is clearly apparent from the foregoing facts that the supply of pulpwood in Eastern Canada is neither so extensive or so inexhaustible as it has been made to appear in the statements made before the House Committee on Foreign Affairs at Washington and in special propaganda put out through the American press. On the contrary, it is certain that any relaxation of the cutting regulations and of the restrictions placed by the several provincial governments upon the use of such wood cut from the Crown limits must inevitably reduce Eastern Canada within a comparatively few years to the present status of the Eastern States in which, the Washington committee was informed, "outside of some large tracts owned by some old and large manufacturers in New York, Vermont, New Hampshire and Maine, there is not a spruce woodland tract of sufficient size to justify the erection of even a 50-ton mill."

The provincial forest policies are justified by the law of self-preservation, no less than by that of self-interest.

A Canadian Through and Through

F. J. D. Barnjum,
Annapolis Royal, N.S.

Frank J. D. Barnjum, from whose pen a number of excellent articles on the pulpwood supply of Canada, conservation, reforestation and other topics, have appeared, is an enthusiastic Canadian. He believes in Canada first, last and always, and never fails to stand up for the Dominion, its splendid progress and undoubted future. Mr. Barnjum, who was born in Montreal, comes from a long line of English ancestors and his present residence and headquarters are at Annapolis Royal, N. S., where he has extensive groundwood pulp and other interests. He attributes his success largely to two things, hard work and to what he humorously refers as a "fool-proof business." An investor in timberlands, he is the largest owner in fee land in the

province of Nova Scotia and probably in eastern Canada. Mr. Barnjum is proud of the fact that he did not make any money during the entire period of the war, except, of course, the usual enhancement in timberland value that is going on all the time and is an increase of capital rather than income. Recently Mr. Barnjum acquired ownership in two or three groundwood mills, which business he says is now in the same class with timberlands, in fact the two combined make the most attractive investment there is.

Should Ontario Do Away with Doyle Rule

"The public is apt to get an entirely false impression from the evidence at the investigation into the sales of timber limits under the late Government," remarked J. I. Hartt, of Orillia, Ont., who is an experienced lumberman, "because they do not know the usages of the trade. Timber has been measured in Ontario for generations under what is known as the Doyle rule. This rule was adopted when the logs were much larger than they are to-day. As a result, with small logs, there is always a great deal of overrun. That is, 30 or 40 per cent. more lumber is taken out of the logs than is shown in the timber measurement. Added to this, there is the allowance for culls, which not infrequently raise the overrun to upwards of 50 per cent. But lumbermen count on this when they are estimating. It is one of the recognized conditions in the trade. There is, therefore, nothing very remarkable to lumbermen in the revelation of which some papers have been making so much that the measurement in the yard had in some cases exceeded the measurement in the log by 50 per cent. or more. I quite agree that it is time that Ontario gave up the Doyle rule, in which scalers are now educated, and adopted something more in uniformity with present day conditions. New Brunswick has a rule which results in underrun instead of overrun. The Quebec rule comes nearer the actual facts. But what I should like to point out, as a lumberman, in justice to my friend, Mr. Ferguson, is said that the mere fact that there is overrun is not an evidence of wrong doing. There is always overrun under the Doyle rule, and will be as long as it is continued. When a new rule is adopted, the lumbermen will change their method of estimating to conform with the new conditions. It won't necessarily mean higher returns from the limits, but a new rule, such as that in Quebec, will do away with an anomaly inherited from a past generation, and will help to prevent misunderstanding."

Kiln Drying Taught by Mail

The manufacturer who uses lumber as a raw material must give more attention to kiln drying than has hitherto been the common practice, or the resulting excessive waste and dissatisfied trade may cause embarrassment. The time has come when the average dry kiln operator must either improve his methods or give way to a more progressive man who has learned and kept in touch with more modern methods.

The high cost of lumber and labor, a shortage of thoroughly air-dry stock, as well as a general movement for efficiency in production make better methods imperative. Losses due to inadequate methods of kiln drying, especially of stock which is not thoroughly air-dry, often run as high as 30 to 50 per cent., and occasionally even 100 per cent. of the value of the lumber. A high percentage of loss is often taken more or less for granted and its seriousness not con-

sidered. Present conditions, however, will force the facts to the attention of the manufacturer. Improper kiln operation means not only a loss of lumber and time, but also poorer goods, fewer orders, less profits, and finally the loss of trade to more alert and up-to-date competitors.

Kiln drying of wood is not just a job. It is an art based upon exact knowledge. It requires an understanding of certain fundamental principles, and their application in the daily operation of the kiln. To be efficient the operator must be up-to-date in his methods relative to the best present practices.

Within recent years the principles underlying the successful kiln drying of air-dry and green lumber have been worked out by the U. S. Forest Products Laboratory which is maintained in co-operation with the University of Wisconsin.

The Wisconsin University Extension Division has arranged to disseminate some of this information by means of a ten-lesson correspondence-study course. The course is written in simple language, and the text is supplemented with numerous illustrations. It is open to anyone with a common school education.

The lessons do not apply to any particular type of kiln, but rather to the conditions necessary in any kiln in order to bring about good results in the drying of various kinds of lumber.

Extension to Spanish River Plants

Further extensions are planned by the Spanish River Pulp & Paper Mills, Limited, at their plants in Northern Ontario. It is expected that by the end of the present year the company will have a total capacity of 650 tons of newsprint daily. Two new machines of 100 tons capacity were announced recently, and now another 50-ton machine is being ordered for the Sturgeon Falls mill. The respective capacity of the three mills will then be Sturgeon Falls, 175 tons; Espanola, 225 tons, and Sault Ste. Marie, 250 tons. The construction and installation of these machines requires upwards of six months.

Proxies are reported to be coming in freely authorizing the stock dividend recently announced by the payment of arrears to preferred shareholders, and it is expected that the scheme will be ratified at the shareholders' meeting called for June 23.

Spruce Mills Erect New Plant

The B. C. Spruce Mills, Limited, have purchased the Watts ranch at Watsburg, B. C., for \$16,000,000 and have decided to locate their big sawmill at that point. The company have in, addition to the purchase of the Watts ranch, secured some thirteen hundred acres from the British Columbia government. President B. F. Wilson, of Wausau, Wisconsin, said the first undertaking of the company would be the construction of the ten mile flume. To give an idea of the immensity of this piece of work, the total number of feet of lumber required for its construction will run close to two million feet. The contract for the installation of the portable mill, which will cut this timber, has been let to the Phoenix Iron Works, of Eau Claire, Wisconsin.

The mill will be constructed of steel and reinforced concrete. This company is also furnishing the plans and machinery, the order for the equipment having already been placed. The B. C. Spruce Mills have recently added an additional block of timber to their already large holding. Block 1, situated south of the city, being their latest acquisition.

Scarcity of Newsprint Alarming

A large deputation of publishers in various parts of Ontario representing twenty-seven daily newspapers, waited upon Sir Robert Borden, premier of Canada, and Sir Henry Drayton, Minister of Finance, in Ottawa recently in regard to the shortage of newsprint. They pointed out that two Ontario dailies were already out of business owing to the difficulty in getting supplies, and some others now threatened with a similar fate are the only local papers in their district.

It was stated because of the contracts made with the Donnacona Paper Co. of Donnacona, Que., by the Hearst papers of the United States, and of the demands on the Ontario Paper Co. supply at Thorold, by the Chicago Tribune, one-fourth of the daily newspapers of Canada are faced with the prospect of extinction within a month. The deputation asked that measures should be taken to prevent such a calamity happening to the Canadian newspapers. As a result, Sir Henry Drayton asked representatives of the Donnacona Paper Co. and the Ontario Paper Co. to visit Ottawa for a conference in regard to the situation.

Following the Supreme Court decision in the case of Price Bros., it is stated that the Donnacona Paper Co. has given absolute notice that it cannot supply a pound of paper after July 1st, because of the demands of the Hearst papers, which now ask that contracts formerly made with the Donnacona Co. shall be fulfilled to the letter.

Warm Supporter of Association Work

W. J. Green, St. Thomas, Ont.

W. J. Green, of the Green Lumber Co., St. Thomas, which was established in 1872, was recently elected a member of the Executive of the South Western Ontario Retail Lumber Dealers' Association.

The Green Lumber Co. is one of the oldest and most progressive concerns in South Western Ontario and carries on an extensive business in the building and contracting line. Mr. Green has been engaged in the same vocation all his life, having started in the planing mill operated by his father under the name of J. M. Green. This firm was later changed to J. M. Green & Co. and about 1900 to J. M. Green & Sons, and later to its present name. J. M. Green, founder of the business, passed away in 1905 and since then W. J. Green has

had general charge of the business. Previous to 1904 his duties were confined to the planing mill and contract work.

Mr. Green has always taken a warm and active interest in the militia and has attained a high rank but prefers that his title of Colonel should not be used as he does not think it in order to mix business with military matters. He is enthusiastic in the interests of the organization and co-operation of the lumber industry and one of the best boosters that the South Western Retail Lumber Dealers' Association has in its ranks.

Biggest Timber Deal Ever Known in East

One of the biggest timber deals, if not the biggest, in the history of the province is pending. The Fraser Companies, of Edmundston, N. B., are said to have an option on timber lands held by the New Brunswick Railway Company, which are valued from \$12,000,000 to \$15,000,000. It might be interesting to note some facts in connection with this big deal. In 1870 a charter was granted to the N. B. Railway Company to construct a railway from Gibson to Edmundston. Instead of a cash subsidy the Legislature granted 10,000 acres of timber land per mile. The company entered into a contract with parties in St. John to build the railway, the terms being that the said parties accept as payment of the said road per mile 10,000 acres of the Government lands to be granted, \$6,000 in first mortgage bonds on the railway, \$5,000 in paid up stock in the company and \$4,000 in cash. The whole length of the road was about 160 miles involving a cash payment of \$640,000. York county council took stock to the amount of \$100,000; Fredericton to the extent of \$25,000; Carleton County gave a subsidy of \$100,000; and Victoria County promised aid to the extent of \$25,000. The promoting company had to put up cash to the amount of \$290,000.

The land grants were as follows: York County 181,332 acres, Carleton 176,373 acres, Victoria 934,018 acres, Madawaska 356,049 acres, totalling 1,647,772 acres. At an estimate of \$3 an acre for the timber lands the value of the provincial aid was \$4,933,316.

The Payment of Freight Charges

In order to eliminate confusion growing out of the difference in exchange value between United States and Canadian money, the Interstate Commerce Commission, Washington, made public the following additions to conference ruling No. 207:

The existing difference in exchange value between the monies of the United States and the Dominion of Canada, while continuing to bear the same denomination, has been productive of confusion and uncertainty as to the construction to be placed upon tariff schedules, division sheets, and accounts in respect of traffic crossing the international boundary. We are of opinion that where transportation of persons or property or transmission of intelligence by wire or wireless takes place partly within the United States and partly within the Dominion of Canada, the tariff charges or divisions thereof accruing for the part which takes place within the United States are payable only in lawful money of the United States, irrespective of the money in which tariff charges or divisions thereof accruing for the part which takes place in the Dominion of Canada may be payable under the laws there in force.

Adjustment should be made in accordance herewith by carriers subject to the act in settling their accounts with connecting carriers.

Appropriate rules or regulations to give effect to this ruling may be included by such carriers in their tariff schedules, if they so desire.

The practice, which has grown up since development of said difference in exchange values, or requiring prepayment of charges in cases where not customarily required theretofore, tends to embarrass shippers and impede foreign commerce. Carriers subject to the act will be expected to refrain from such unusual requirements in cases where they are not justified by other considerations.

New Company Erecting Mill at Doaktown

The Southampton Lumber Co., Limited, of Doaktown, N.B., was recently incorporated with a capital stock of \$48,000, to manufacture lumber, lath shingles, etc. It is probable that the company may, in the near future, establish a box factory. It is the intention to cut 3,000,000 ft. this year and next season the output will likely be 5,000,000 ft. The company is erecting a new mill and installing a rotary saw and steam feed carriage from the Oxford Mfg. Co., Oxford, N.S., a gang edger, lath machine and log jack from the E. Long Mfg. Co., and an A. R. Williams shafting engine, boiler and planer. The mill will be equipped with extra power Goodyear endless belting. The mill is situated in Doaktown, with splendid shipping facilities, a railway siding running right to the plant, principal portion of the cut will be white pine and the remainder spruce, hemlock and birch. The Southampton Lumber Co. has planned for the erection of another mill on the St. John River, and have timberland in King's County, N.B., and expect to cut about 3,000,000 ft. there in 1921.

Big Company Will Enlarge Plant

Recent transactions place the control of the Brantford Emery Wheel Company, Limited, Brantford, Ont., in the hands of those whose interests are identical with the Waltham Grinding Wheel Company, of Waltham, Massachusetts. The Brantford Company has been operating for the past ten years in the manufacturing of grinding wheels, and it is felt that the new interests will enlarge immediately production facilities and be a factor of service to the grinding wheel users of Brantford and other parts of Canada.

Colonel Frank A. Howard is to continue as managing director.

The Waltham Grinding Wheel Company is one of the oldest and largest companies of the United States, the originators of the so-called elastic wheel process and have a record of 50 years of service and quality.

The new owners expect to greatly enlarge their production at Brantford. They already have a large Canadian trade and this in conjunction with the present trade of the Brantford Company, will make the concern one of the largest and most productive in the Dominion of Canada.

Heavy Purchase Made in Timberlands

One of the largest timberland deals ever consummated in this state was completed when papers were passed which changed ownership to the Eastern Manufacturing Co., the Orono Pulp and Paper Company, the Dead River Timberland Company and E. B. Draper, of the Eaton holdings, for which negotiations have been in progress for some time and which comprise about 260,000 acres of timberlands together with mills and rights both in this country and Canada. The price paid for the purchase was between \$2,000,000 and \$3,000,000, says a despatch from Maine.

Representatives of the individuals and concerns making the purchase met in the offices of the Merrill Trust Company and for the purposes of handling the proposition organized a new corporation to be known as the Passamaquoddy Land Co. The officers elected were: D. A. Crocker, the present vice-president of the Eastern Manufacturing Co., president; Charles F. Hutchings, of the Dead River Co., treasurer; D. A. Crocker, Charles F. Hutchings, E. C. Ryder, Esq., E. B. Draper and F. E. Bragg, directors.

The Eaton lands, so-called, are located in the three counties of Penobscot, Washington and Hancock, together with small pieces in New Brunswick.

Erecting New Sawmill in Fredericton

G. G. Scott, of Fredericton, N. B., who is the owner of a mill at Upper Cross creek in that province, is erecting a new mill on the late Richard Estey's site at Fredericton. Mr. Scott has installed a Robb cross compound engine with generator attached to generate power and light. The other equipment consists of a rotary saw and steam feed carriage from the Robb Engineering Works of Amherst, N. S. The new plant will manufacture lumber, lath and shingles and it is the intention in the near future to instal a dry kiln and to make hardwood flooring. G. G. Scott is a son of J. M. Scott who is a well known employee of the Fraser Companies, Fredericton.

What is Going on in the Pulpwood Arena

Friendly Settlement of Pulpwood Problem

The Montreal Star, which is the largest daily paper issued in Canada, referring to the export of pulpwood, says editorially:

The Foreign Affairs Committee of the House of Representatives at Washington joins the Senate body in authorizing the President to name a commission to treat with Canada upon the pulpwood embargo question. Admitting that the provincial embargoes placed on the export of pulpwood from Canada are sound in law, and that the United States is suffering from a shortage of raw material at home, the House committee proposes that, in the event of a refusal by Canada to permit the export of her pulpwood, retaliatory measures be adopted to the end that no paper at all could be made in America. Confidence is expressed in an ultimate amicable solution of the difficulty.

The principle involved in this international problem is of some importance. It concerns the whole future of Canada's wealth of raw materials, of which the pulpwood commercially available now is a very small part. Nobody will claim that Washington has begun the attempt at a solution of the difficulty with very much dignity, since threats of retaliatory action have been urged from the outset and by some men in high places.

The fact remains that settlement of disputes with the neighbor country amicably is the method preferred by most people on both sides of the undefended border line. The people themselves are often bigger than their politicians. Canada has vital interests to protect in these coming negotiations regarding pulpwood, and must regard them with serious concern, but from our viewpoint also it should be said that a friendly settlement of such problems is always possible between men of good-will.

Paper Company Buys Pulpwood Limits

At a recent meeting of the board of the Howard Smith Paper Co., held in Montreal, the directors raised the dividends from 5 per cent. to 8 per cent. The company has lately undertaken some important development work, and there will be a small stock issue to provide funds to meet this cost. The Howard Smith Paper Mills have purchased 470 square miles of pulpwood limits in the Gaspé Peninsula and it is said, intend erecting a new pulp unit at Cornwall, Ont., where the plant of the Toronto Paper Mfg. Co. is located. The latter was acquired a few months ago by the Howard Smith Paper Mills. The outstanding common stock of the company is \$2,500,000, out of an authorized issue of \$4,000,000.

Says Pulpwood Will Be Very High

Thirty-five dollar pulpwood isn't such a far cry after all, according to a sale reported a few days ago by Edward W. Elsworth, of Watertown, N. Y., a well known dealer in Canadian pulpwood among the mills in this section. This sale was made at \$35 a cord for four-foot peeled wood.

Only a few weeks ago Mr. Elsworth predicted \$35 wood next fall. Some of the manufacturers of pulp and paper thought the prediction was wild at the time, but are beginning to believe that Mr. Elsworth did not fix the time near enough. Since the world war started, Mr. Elsworth has made many predictions on pulpwood and they have all been correct.

Party Visit Big Pulp Projects

A large party of U. S. capitalists, investment bankers and brokers of New York, Boston and other cities, along with the leading financiers of Montreal and officials of the Riordon Pulp and Paper Co., Montreal, recently paid a visit to Ottawa, where they were royally entertained, and left for Lumsden's Mills and then proceeded to the new \$15,000,000 plant of the Kipawa Fibre Co. at Temiskaming. The Kipawa Co. is a subsidiary of the Riordon Pulp & Paper Co.

The party consisted of over one hundred persons representing over a billion dollars in connection with the pulp and paper industry of the United States, and, while in Ottawa, were the guests of the Dominion Government. On the way there a stop was made at Hawkesbury, where the big sulphite pulp plant of the Riordon Co. was inspected. At Temiskaming the visitors were greatly impressed with the large enterprises of the Kipawa Co. and viewed with much interest the dam, power plant, water screens house, and last but not least the splendid bleached sulphite plant, which is now in full operation and turning out 140 tons and over a day. The capacity of this plant is being doubled. The visitors were also taken by steamer for an inspection of the reserve log boom at Lake Temiskaming and were delighted with their visit to the sawmills and the contractors' camps, the cafeteria, the barking plant, the piling ground and other buildings under construction.

ation and turning out 140 tons and over a day. The capacity of this plant is being doubled. The visitors were also taken by steamer for an inspection of the reserve log boom at Lake Temiskaming and were delighted with their visit to the sawmills and the contractors' camps, the cafeteria, the barking plant, the piling ground and other buildings under construction.

Heavy Pulpwood Trade from N. B.

Two pulpwood steamers arrived recently at Portland from the Maritime Provinces. They are first this season of a fleet of some sixty new steamers coming from the Great Lakes via the St. Lawrence River, which are expected to stop on the way at various New Brunswick ports to load similar cargoes for discharge at Portland, where the wood will be shipped on cars to the mills of the International Paper Company. The first to arrive was the Lake Elsie, a steel steamer of 2,674 tons, 1,563 net, which was launched during the winter at Ashtabula, Ohio. The other was the Lake Greba, of about the same size. Several other boats are loading at provincial ports for Portland.

Is Mr. Backus After More Limits?

E. W. Backus, who is head of the Fort Frances Pulp & Paper Co. and also the Minnesota & Ontario Power Co., is said to have made application to the Ontario Government for a lease of valuable timber limits along the English River just to the north of Kenora. If the company secure the timber limits, they propose to erect a pulp and also a paper mill at Kenora. The Backus interests are also applying for the power rights of White Dog Falls on the Winnipeg River, into which the English River flows about thirty miles from Kenora.

The announcement that the Backus concern at Fort Frances had applied to the Ontario Government for additional pulp leases and power concessions, aroused a storm of protest from the publishers of Ontario newspapers who were in Ottawa recently endeavoring to prevent a diversion of their newsprint supplies to the United States. At a special meeting a resolution was carried by them expressing their unanimous opinion that, in view of the attitude of the Backus interests towards domestic requirements of newsprint, it is not in the public welfare that the Backus organization should be granted any further pulpwood or power concessions in Canada; and that all pulpwood concessions, previously granted to them, in respect to which they may be in default, should be cancelled forthwith. It was stated that the same company had not yet fulfilled the conditions under which they secured from the Ontario Government several years ago, pulpwood concessions of 1800 square miles in the Lake of the Woods district.

Premier Drury said recently that he had heard nothing of the application for more pulp concessions for the Backus pulp and paper interests in Fort Frances. "I can say that they won't get any more unless they come through with a fair share of paper for Canadian publishers," said the Premier. "We are taking up with them at present this matter of more paper for the Canadian publishers. In a letter just received there is no mention of any additional concessions for pulp from them."

Paper Industry Draining New England Timber

The output of lumber in the next decade in Maine, Vermont and New Hampshire will be greatly reduced because of the heavy inroads on the timber made by the pulp and paper industry. The paper manufacturers are making an effort to get all available pulp stock before it is necessary to abandon their plants. The result is that much of the timber that would otherwise be cut into lumber has been made into wood pulp. If it were not for the pulp and paper interests, the New England states, says a recent investigator of timber conditions, could keep up their present rate of lumber production for a long period. It is estimated that the production in Maine will shrink a quarter of a billion feet in the next ten years although it had been said that Maine would hold her own from now on. The same situation prevails in a proportionate degree in Vermont and New Hampshire. The Forest Service has been investigating production, timber stand, etc., in these New England states this spring, in preparation for the report required by the Senate under the Capper resolution.

Conducting Important Survey Operations

H. S. Laughlin, Chatham, N.B.

H. S. Laughlin, forester, for J. B. Snowball Co. Ltd., Chatham, N. B., is undertaking survey extensive work this summer and at present has two parties in the field. One party of nine men is under Deputy Surveyor Archer, who is doing all the line work and is operating separately from the cruising party. The area to be examined is being surveyed into blocks of 200 chains square. Fred White is in charge of the cruising party, which consists of two cruising crews of four men each and a camp craftsman. Mr. Laughlin is personally supervising the whole work. In the cruising party are seven University graduates while skilled mechanics and scalers in the employ of the company make up the remainder. A considerable portion of the area was burned over this spring

and a careful study will be made of this to estimate the amount of damage done and to consider the advisability of putting felling crews in to cut the scorched timber. Another interesting phase of the work will be a study of the districts attacked by the budworm, which territory was examined last year and it was thought that the spruce trees might recover from the attack. Mr. Laughlin says that the work which he and his men are carrying out is in co-operation by the New Brunswick Service. A copy of all notes will be made by the company and turned over to this service, and the latter will pay one-half the expenses of the survey. The estimated cost of the entire work is \$50.00 per mile.

Lumberman Representative at Paris Conference

Mr. J. H. Burton, J. H. Burton & Co., 52 Vanderbilt Avenue, New York City, has been appointed by J. W. McClure, President of the National Wholesale Lumber Dealers' Association, to represent that association at the organization meeting of the International Chamber of Commerce which will be held in Paris this month.

Mr. Burton is an important factor in the export of pitch pine and Pacific Coast lumber, and has also taken an active part in the councils of the Committee on Reconstruction of the Chamber of Commerce of the United States.

About 500 delegates are expected to attend this international conference from Great Britain, France, Italy, Belgium and the United States. The most vital economic problems will be threshed out. The business interests of the nations feel that the creation of an international chamber of commerce will do much to solve the serious economic questions confronting the world to-day.

Link-Belt "Twyncone" Friction Clutch

The "Twyncone" Friction Clutch is one of the Link-Belt Company's newest achievements. Among its many exclusive features, it has one-point adjustment. All moving parts are inclosed, making for absolute safety. It is perfectly balanced, this in itself being a great advantage, as it allows the clutch to run at very high speed without causing it to "throw in" or out. Construction of the "Twyncone" clutch is very simple, and the moving parts are reduced to a minimum. High speed does not affect its operation. It can be "eased in" when running at any speed. The friction cones are lined with thermoid. All parts are accessible, and can easily be replaced should the necessity arise.

Western Mill Sold to Toronto Man

The plant of the Yahk Lumber Co. at Wasa, B. C., has been sold to W. J. Lovering of Toronto. It is learned that the consideration was in the neighborhood of \$150,000. Samuel Taylor was managing director of the Yahk Lumber Co., and the sale of the mill culminates for him thirty-five years of continuous service in the lumber industry.

Mr. Taylor went west in 1901 and managed the camps of the Fernie Lumber Co. for two years. Going to Cranbrook in 1903, he engaged with the East Kootenay Lumber Co. and later linked forces with C. D. McNab, manager of the Baker Lumber Co. at Waldo, and founded the Standard Lumber Co. at Cranbrook, holding that position until the great conflagration which wiped the plant out.

It was while manager of the Standard Lumber Co. that Mr. Taylor launched the Rock Creek Lumber Co., disposing of his interests later to Joyce Bros. He was also the moving spirit in the organiza-

tion, and operation of the Taylor Lumber Co., which he subsequently sold. In 1911 he brought into existence the Yahk Lumber Co., being president and managing director until he disposed of the business last month to Mr. W. J. Lovering, of Toronto, who recently returned from an extended business trip to the coast.

Inter-Association Arbitration Plan

At the annual meeting of the National Wholesale Lumber Dealers' Association, New York, a resolution was adopted authorizing the Arbitration Committee to approach other lumber associations with a view of working out a plan to arbitrate disputes between a member of one lumber association and a member of another association. At the present time there is no arbitration method covering such disputes, and the successful outcome of arbitration between members of the National Wholesale Lumber Dealers' Association has resulted in the Arbitration Committee of that association presenting a scheme of co-operation with other associations in working out a broader arbitration plan. The Arbitration Committee of the National Wholesale Lumber Dealers' Association, of which Mr. J. B. Montgomery of Pittsburgh, Pa., is chairman, has been working on this for sometime, and it is expected some satisfactory plan of arbitration between the various lumber associations can be soon put into effect.

Canadians on National Committees

The National Wholesale Lumber Dealers' Association have appointed their standing committees for the ensuing year and a number of Canadians have been placed on the leading committees.

Gordon C. Edwards of Ottawa, Ont., is a member of the Executive Committee; W. G. Power of St. Pamoce, Que., is on the Board of Managers of Bureau of Information; W. C. Laidlaw, Toronto, is on the Fire Insurance Committee; J. S. Gillies, Gillies Bros., Braeside, on the Forestry Committee, and Angus McLean of Bathurst, N.B., on the Ocean Marine Committee.

Those on the Membership Committee for the Canadian provinces are C. W. Wilkinson of the Union Lumber Co., Toronto; W. G. Power, St. Pamoce, Que., Angus McLean of the Bathurst Lumber Co., Bathurst, N.B., and F. B. VanDusen, Brockville, Ont.

Crown Timber Dues Up 100 Per cent.

In the last issue of the "Canada Lumberman" there was published a statement of the new schedule of Crown dues in Ontario on timber, pulpwood, cord wood, etc. The new rates, which went into effect a few weeks ago, supersede the ones enacted in the Crown timber regulations in March, 1914.

The average increase in Crown dues is one hundred per cent., all of which adds materially to the cost of turning out forest products.

At the request of several readers, the "Canada Lumberman" prints a comparative statement of the increases. Section 14 of the Crown Timber Regulations (the second column of figures showing the old dues) now reads:—

All timber, sawlogs, wood, or other lumber cut under any license now in force, or under any license which may be hereafter granted, shall be subject to the payment of the following Crown Dues, that is to say:—

	1920	1914
Black walnut and oak, per cubic foot	\$.06	\$.03
Elm, ash, tamarac and maple, per cubic foot06	.03
Birch, basswood, cedar, poplar, per cubic foot05	.02½
Red and white pine and jackpine, per cubic foot07½	.05
All other woods, per cubic foot03	.02
Basswood and poplar sawlogs, per thousand feet, B.M. ...	2.00	1.00
Maple and oak sawlogs, per thousand feet, B.M. ...	2.50	1.25
Hemlock, tamarac, and other woods, per thousand ft., B.M.	1.50	.75
Spruce, per thousand feet, B.M.	2.00	1.00
Cordwood (hard), per cord50	.20
Cordwood (soft), per cord25	.12½
Tan bark, per cord60	.30
Spruce pulpwood, per cord80	.40
Balsam and other pulpwood, per cord40	.20
Railway ties, per tie10	.05
Spruce Boom timber	2.00	..
Pine boom timber	2.50	..
All other boom timber	2.50	..
Cedar poles, 30 ft. and less25	..
Cedar poles, 31 to 40 ft.50	..
Cedar poles, 41 to 50 ft.75	..
Cedar poles, 51 ft. and over	1.00	..
Cedar posts, each02	..

The figures for boom timber, poles and posts are not given for 1914 as the rates are changed from time to time, by the Department of Lands and Forests.

Activity Everywhere in Lumber Production

Reviewing general conditions in the lumber business from all over Canada during the month of May the last issue of the Labor Gazette, Ottawa, says:

River driving operations started in Nova Scotia and New Brunswick during the month, heavy ice causing unusual delay so that the saw mills were not expected to be in full swing before the middle of May. At Charlottetown saw and shingle mill workers were said to be well employed. Yarmouth, Moncton and Amherst reported some demand continuing for woodmen. The saw mills at St. John were operating, employing many men who were engaged at long-shore work in winter; it was estimated that fifty million feet of logs would be towed down the St. John river this season, as compared with thirty-two million feet last year. At Fredericton the early drives were reported successful, though a large quantity of logs had to be left in the woods; prospects were bright for work at the saw mills, and there was already some demand for millmen. Bathurst reported a strong demand for river drivers; a few of the sawmills began working. At Campbellton it was reported that about 10 per cent. of the cut had to remain in the woods, but enough logs came out to insure work at the mills all summer. River driving started in Quebec district under favorable conditions, and at Sherbrooke the saw and shingle mills were busy. The sawmills at Ottawa and Hull started work towards the end of the month and were running at part capacity. At Peterborough lumbering operations were very active, and the mills were busy, including a new mill built during winter, the largest production since 1914 being anticipated. In Owen Sound district lumbering work was rather quiet, but some camps on the north shore of the Georgian Bay were getting the logs ready for rafting; saw mills were busy, but tie mills were slack. At Sault Ste. Marie river drivers were in strong demand, and mill owners were calling for engineers, settlers, sawyers and laborers. Most of the bush camps near Port Arthur and Fort William had broken up early in the month, but some were kept open and continued to take general bushmen and tie makers; work was hampered by industrial disputes in some camps. Winnipeg reported a demand for bushmen for northern Manitoba and for mill hands. At The Pas there was a demand for river drivers, and about 450 men were required for the saw mills, which, however, had not yet commenced work. Regina, Saskatoon and Prince Albert reported a demand for drivers and millmen for northern Saskatchewan, but work in the woods for the most part ceased, many of the workers returning to their farms, leaving the lumberjacks and other permanent woodsmen to work in the mills. There was a demand for river drivers at Hudson's Bay Junction. The lumber mills at Big River had not started work at the close of the month. Edmonton reported a demand in Alberta for drivers and mill hands. The lumber camps at Fernie were still busy, with a demand for sawyers, swamper, etc.; the mills were expected to start work on May 1. Nelson, Trail and Cranbrook reported activity in lumbering, with a demand for woodsmen and mill hands. In Vernon district the drive started at the end of the month. Logging operations continued in Kamloops section. Vancouver reported lumbering, saw and shingle mills as very busy, with demand for woodsmen and mill hands. The lumber mills at New Westminster were working at capacity, and skilled and unskilled men were in great demand. Prince Rupert reported activity in logging and mill operations, men being supplied to camp on Queen Charlotte Islands; a new camp started at Surf Inlet. Nanaimo reported activity on Vancouver Island, all the camps and mills running regularly; the lumber camp which started recently on Lasqueti Island closed down. Victoria also reported activity in logging camps, saw and shingle mills, with brisk export trade.

Widening Interests of Clarke Bros.

Clarke Bros., Limited, of Bear River, N. S., who have been making extensive additions to their sawmills and woodworking plants, and are also erecting a thirty ton sulphate pulp mill, report that good progress has been made in all their undertakings. At the reconstructed mill at Lake Jolly, excellent work is being done. They have increased their daily capacity of clothespins by 50 per cent., and practically doubled their output of dowels, owing to the repairs made at this point. The past winter was an exceptionally good one for woods operation and Clarke Bros. put in a large quantity of logs. They now have a supply sufficient to keep the mill running steadily on dowels and clothespins for the next six months. The plant has been going at capacity for some time and the firm recently shipped 25,000 boxes of clothespins to foreign markets and have orders in hand, covering their entire output for the next three months. They have had no difficulty in securing shipping space for their production and with the slackening in the demand for tonnage, they anticipate lower freight rates in the near future.

In regard to their new sawmill, which began operations about the middle of April, work has been going on steadily in the mill, with an output of thirty to forty thousand feet a day, according to the

size of the logs. Clarke Bros. recently installed a 150 h.p. boiler at that point with Dutch oven, utilizing sawmill waste sawdust, etc., and at the same time furnishing steam for the sawmill, machine shop, portable steam hoist, etc. Clarke Bros. have recently added to their equipment at this mill a stove machine to take care of their small logs until their new pulp mill is in operation.

In connection with their sulphate pulp plant, brick work has been proceeding splendidly since the last of March. The wet machine and screen room have been roofed in and placing the roof on the diffuser room is now under way. The digester building has the walls completed for the three floors. The tank room is also finished and the recovery plant well advanced and now being roofed in. By the middle of next month, Clarke Bros. expect to have their entire buildings comprised in the outfit completed, and installing the ma-

W. G. Clarke, Bear River, N.S.

W. W. Clarke, Bear River, N.S.

chinery will then be commenced. One chimney for use in connection with the plant, is made of buff-colored brick and is 165 feet high, 9 feet internal diameter and 16 feet external diameter at the base. Two railway sidings have been put in, one for the accommodation of the sawmill and the other for the pulp mill. The machinery for the entire lay-out of the pulp plant is on the ground and ready for setting up. About one hundred and twenty-five men are engaged in construction work and a new dining room has been built capable of accommodating this number. J. B. Roberts of the firm of J. B. Roberts & Co. is giving his personal attention to the construction part of the programme.

In the cleaning up of their softwoods operation, preparatory to dropping out of this end of the business, and confining their activities entirely to hardwoods, as far as their Lake Jolly mills are concerned, Clarke Bros. put in about a million feet of spruce and pine, old growth, during the past winter, and have now commenced cutting this and bringing it to their docks for shipment. The lumber has been sold at satisfactory prices, the demand is excellent and shipments are being made both by rail and water, as fast as cargoes can be got ready for delivery. Taken altogether, Clarke Bros. are well satisfied with the condition of affairs as they stand at the present time and regard the outlook as favorable.

Northern Firm Sawing Million Feet

Carl Sorensen & Co. of Fort William, Ont., who are well-known dealers in lumber, logs, cedar products and wood, are operating a portable mill on their lands three miles north of Crozier Station, Ont., and will get out about 1,000,000 ft. of lumber this season. The output will consist of mixed timber, such as ash, elm, poplar and a fair percentage of spruce and tamarac. They do not expect to ship the lumber until it is thoroughly dry.

Carl Sorensen & Co. hope next winter to have a greatly increased cut of logs as they were rather late in getting in the bush last fall. With an earlier start they expect much better results. They intend as soon as conditions become stabilized in the building and lumber arena, to start retail yards in Fort William and Port Arthur.

Will Visit Canadian Paper Mills

The National Editorial Association of the United States will visit the pulp and paper mills of Eastern Canada during June. The party will spend 24 days in Eastern Canada, visiting all the principal points in the Maritime Provinces, Quebec and Ontario. They intend to visit the pulp and paper plants at Grand'Mere, the Shawinigan mills, and the Abitibi Pulp and Paper Company at Iroquois Falls.

Great Havoc Wrought by Forest Fires

Thousands of Acres of Wooded Lands in Maritime Provinces Swept by Flames Until Subdued by Rain

Great was the rejoicing throughout the provinces of New Brunswick and Nova Scotia when reports were received that the forest fires, which had been raging for two weeks, had been extinguished or greatly subdued, writes the St. John correspondent of the "Canada Lumberman." Only those who have lived in an area menaced by forest fires can comprehend the relief that follows those long days and nights of terror. To see the sky illuminated for miles along the horizon, as the devastating blaze sweeps onward every minute bringing it nearer to some town or settlement and to be partially blinded by the black smoke and choking for want of pure air add to the horror which is brought home to those who live in a land such as this.

Today thousands of acres of wooded lands are nothing but a smouldering ruin and millions of dollars worth of lumber have gone beyond reclaim. Until June 3rd all hope of saving the magnificent timber lands of the two provinces was given up, but true to an old saying "the darkest hour is before the dawn", for Providence took a hand and the long drought ended. Clouds began to gather and in many sections heavy showers fell as a result of which the fire was to a great extent extinguished and the fighters given an opportunity to cope with the situation.

In Cumberland County, Nova Scotia, 35,000 acres of green forest were destroyed, while in New Brunswick the principal fire raged along the Miramichi river when over ten miles of forest was swept away like so much match wood. In Restigouche county the timber loss is estimated well over half a million and may reach a million. Lumber yards between Kedgwick and St. Quentin were entirely cleaned up and a large quantity of manufactured lumber fell victim to the conflagration. At White Brook, N. B., a sawmill of the Richards Manufacturing Company was destroyed and all of the manufactured timber went up in smoke. Miles upon miles of pulpwood lands only added more fuel to the blaze and in the vicinity of Sigas, between St. Leonards and Edmundston, no less than fifteen miles was aflame. Lumber camps, settlements and towns alike suffered and the loss is a heavy one, not only to these provinces, but to the world at large who must depend to no small degree on the lumber and pulpwood sent out from here.

G. H. Prince, provincial forester, said that if the rain had not come it would have been useless to further fight the fires as they had gone beyond all human effort to control.

Already there has been a clamor for the restoration of fire permits which were cancelled some time ago. This is a result of the light showers which have fallen. The Department of Lands and Mines, however, has refused all such applications until after a rain heavy enough to prevent a recurrence.

A late report from Cumberland County says that while the rain did not quench the fire completely it checked them and now they are much easier to handle and with ordinary precautions the menace is now at an end.

In addition to the thousands of valuable timber lands devastated hundreds of buildings and homes were swept away in districts falling in the path of the flames. In the town of St. Quentin, as previously reported, seventy homes were burned while outside this town thirty-five others were burned. In other districts reports are coming in daily telling of scores of homes being burned and the inhabitants left destitute.

Despite the fact that the Minister of Lands and Mines in New Brunswick took every precaution to avert serious forest fires, and stationed rangers at various points, established lookouts, etc., the unlooked for drought frustrated their efforts and combined with carelessness on the part of farmers and fishermen the situation at this time of year was never worse. As a result measures are being taken to prosecute offenders and the fight against this menace to such valuable timber lands will be waged unabatingly until the season is over.

Budget of Briefs from the West

The box manufacturers of British Columbia recently organized as a section of the British Columbia Division of the Canadian Manufacturers' Association as it was the feeling among the individuals that some such forms of association was necessary to enable them to co-operate in handling of not only domestic business but also the large amount of export trade offering. Many substantial orders have already been taken on and apportioned between the manufacturers according to the capacity of plant or the condition of their order books. The chairman of the new organization is Mr. R. B. Sharpe, of the Pacific Box Company, Vancouver.

Dimension timbers, ties, shiplap and lumber will be cut at the new mill of the White Rock Tie and Lumber Co., Ltd., which is

now about ready for operation. The company lost no time after organization in getting construction advanced. A mill equipped to turn out 20,000 feet per day of finished lumber, has been installed, the plant having been bought from the A. R. Williams Machinery Co., Ltd., Vancouver. To operate the mill electric power is obtained from the B. C. Electric Railway Co., and a 71-h.p. motor, purchased from the A. Fraser Co, Ltd. As the plant is located right on the Great Northern Railway at White Rock, shipping the output is a simple matter compared with other mills which have to face a haul of several miles to load on cars.

All embargoes on rail shipments to U. S. points due to the railway troubles have been lifted, with exception of points on the Lehigh system, and that is expected to be clear soon. Yet, according to Secretary C. B. Floyd, of the Pacific Coast Shippers' Association at Seattle, the number of cars in transit or at Minnesota transfer, awaiting diversion orders at the moment is greater than since January.

The big Bloedell, Stewart and Welsh logging camp, near Union Bay, B. C., has been practically completed. A wharf on the sea-front has been constructed, while a logging railway has been graded several miles into the woods. At the present time a 1,200-ft. overhead bridge is being installed to take the track above the Canadian Collieries and the Esquimalt and Nanaimo Railway tracks. Up-to-date living quarters have been constructed on skids in order that they may be removed to what will be their permanent location as soon as the railway line is completed.

Increasing lumber shipments from Vancouver Island to the mainland have decided the C. P. R. to place a new car barge on the Ladysmith-Vancouver route. The barge will be built by the Harbor Marine Company, Victoria, and will be completed early in the fall. It will have a length of 270 feet, beams 48 feet, draft 12 feet, and will carry eighteen cars of lumber.

Capt. Robert Dollar the veteran Pacific Coast steamship owner, was a speaker at the Canadian Manufacturers Association convention this month. Capt. Dollar's ships take millions of feet of Vancouver lumber to the Orient every year, and he is in the manufacturing business on his own account as well as having lumber yards in Japan and China.

A rumor circulated of late in the Alberni district, and widely credited in that locality, is to the effect that an English company has been negotiating with the Red Cliff interests to take over their timber holding in order to establish one of the largest export mills in the Empire on the Alberni Canal. The chief output of this mill, it is said, would be cut-to-fit houses for Europe. Importance in this connection is attached to the recent visit to the province of C. H. Cudemore, in the interests of the Twentieth Century Building Company, a firm which has been formed to import cut-to-fit houses into England from British Columbia.

Fire which broke out recently in the big mill of the Canadian Puget Sound Timber and Lumber Company, on the Inner Harbor, Victoria, probably would have caused much damage but for the sprinkler system which kept the blaze in check until the fire department arrived.

Several Island mills are busy just now cutting part of an order for 5,000,000 feet of ties placed with British Columbia lumbermen by the British Government, which intends to use them in connection with its railways. The Cameron Lumber Company is cutting 1,500,000 feet, and the Victoria Lumber and Manufacturing Company, of Chemainus, is also contributing.

Western Lumberman Visits East

A. T. Robson, of Vancouver, manager of the Associated Mills, Ltd., spent a few days in Toronto recently with E. D. Warner, eastern Canada representative, who recently arrived in Toronto and has opened offices at 26-28 Adelaide St. West. Mr. Robson called upon a number of friends in the lumber trade and reported that stocks in British Columbia are getting low owing to the difficulty in securing logs occasioned by the marine strike. He is of the opinion that a strong tendency exists to stabilize prices in western forest products, but owing to the high cost of production and constantly ascending prices of logs, it is not expected that there will be any drop in values.

Examinations for Log Cullers

The Board of Examiners of Cullers of the Province of Quebec will hold examinations for log cullers and measurers as follows: Hull, P. Q., crown lands office, on July 6th; Chicoutimi, crown lands office, on July 14th; Restigouche, Co. of Bonaventure, Chaleurs Bay Mills, on July 27th; Quebec, Department Lands & Forests, on September 7th.

Personal Paragraphs of Interest

J. B. Knox, of Knox Bros., Montreal, is on a visit to the Pacific Coast.

H. E. Pelton, of Dunfield & Co., Ltd., Halifax, has been on a business trip to Montreal and Toronto.

J. H. Carswell, of the Carswell Lumber Co., Renfrew, Ont., was in Toronto recently calling upon the trade.

W. W. Carter, president of the Fesserton Timber Co., Toronto, leaves shortly on an extended business trip to the west.

Fred Hooten, of the Strable Lumber & Salt Co., Saginaw, Mich., spent a few days in Toronto recently, calling upon the trade.

John J. Miller, of the C. G. Anderson Lumber Co., Toronto, left recently on an extended business trip throughout the Maritime provinces.

Wm. Turnbull, of Victoria, B. C., lumber commissioner for British Columbia, spent a few days lately in Montreal, Ottawa and Toronto on business.

W. Y. Lloyd, wholesale lumber, has removed his office from 51 Yonge St. to 350 Confederation Life Building, Toronto, where he has more spacious quarters.

J. M. Donovan, wholesale lumber, has removed his office from 707 Bank of Hamilton Bldg., to No. 2 Tyrrel Ave., Toronto, and his telephone number is Hillcrest 6097.

H. J. Terry, of Terry & Gordon, Limited, Toronto, has moved out to his new summer home at Port Credit, which is built entirely of British Columbia forest products.

M. A. Grainger, Victoria, B. C., chief forester of British Columbia, was in Toronto lately on his way to attend the Imperial Forestry Conference in London, England.

G. A. Gignac, of J. H. Gignac, Ltd., lumber merchants, Quebec, has been appointed a member of the executive of the Quebec Division of the Canadian Manufacturers' Association.

C. W. McCabe, of Kendal Ave., Toronto, has been appointed Ontario representative for Campbell-MacLaurin Lumber Co., Montreal, and has entered upon his new duties.

James W. Sewall, of Old Town, Maine, is establishing a forest tree nursery there for pine and spruce. Mr. Sewall says there is considerable interest in reforestation making itself manifest. Mr. Lewis T. Calhoun, of the Sewall office, has active charge of this department.

Camille Ross, of Rimouski, Que., who is well known in the lumber industry, has been appointed representative for Terry & Gordon, Limited, of Toronto, in Quebec and the East and has entered upon his new duties.

Mr. John Ball has resigned the position of manager of the Kenogami and Jonquiere Mills of Price Bros. & Co., Ltd. On leaving, presentations were made to Mr. and Mrs. Ball by the mill hands and by various societies.

Robson Black, secretary of the Canadian Forestry Association, Ottawa, and Clyde Leavitt, chief forester of the Commission of Conservation, left recently for London, Eng., where they will attend the Imperial Forestry Conference, which will be held in London July 17th to 26th.

Hon. Val. Winkler, Minister of Agriculture for Manitoba, died suddenly at his home in Morden, Man. He was one of the oldest members of the legislature and for some time had not been in good health. For several years he was engaged in the lumber business. Mr. Winkler was 56 years old.

Dr. C. D. Howe, of the Commission of Conservation, and acting dean of the School of Forestry at the University of Toronto, has been making a study of the work at the Proulx Nursery of the Laurentide Co. He had four assistants helping him with the work, which is to deal with the records made on the experimental plots.

Matthew Brown, of Toronto, Canadian representative of Thomas Hall Lumber Co., of Charleston, W. Va., has returned from a visit to the south and reports the demand for hardwood lumbers of all kinds as being steady. Mr. Brown spent some days with his firm at Charleston.

George E. Petry, of Toronto, late of the Campbell-MacLaurin Lumber Co., Montreal, has joined the selling staff of the Canadian General Lumber Co., Toronto, and will cover eastern Ontario and portions of the northwestern part of the province. He has entered upon his new duties.

Mrs. Eddy, wife of the late E. B. Eddy, who was the founder of E. B. Eddy Co., Hull, Que., the widely-known paper, match and fibreware manufacturers, has donated the sum of \$300,000 to Dalhousie University, Halifax. The money is to be used in building Shirreff Hall, a dormitory for the girl students of the University, which will be a memorial to Mrs. Eddy's parents. Her father, the

late John Shirreff, was for a quarter of a century high sheriff of Northumberland County, N. B.

B. J. Thibodeau, of Boiestown, N. B., who conducted a lumbering business and general store in that place, died recently of heart failure. He leaves a widow and two sons. A short time before his passing he had undergone an operation in Victoria hospital, Fredericton, and had returned to his home.

J. C. Bartram, who for many years was associated with the Rideau Lumber Co., Ottawa, has now embarked in the wholesale lumber line on his own behalf and opened an office in the Jackson Building, corner Bank and Slater Streets, Ottawa. His many friends in the industry will wish him every success in his new sphere of activity.

O. F. Bryant, who was formerly in charge of the pulp and paper division of Forest Products Laboratories, Montreal, and later with Bennett Limited, manufacturers of leather board, has joined the staff of the Laurentide Co., at Grand'Mere. He is in charge of the Research Department, where his ability as a chemical engineer will find full scope for expansion.

In connection with the survey of the timber resources of Ontario, the work, which is being undertaken under the supervision of Roland D. Craig of the Commission of Conservation, will cover the country between the north shore of Lake Huron and the National Transcontinental Railway. Mr. A. B. Gilbert is now working on the Canadian National Railway north of Sudbury.

H. J. Moore has been appointed Forester of Highways by the Provincial Government of Ontario with office in the Parliament Buildings, Toronto. Mr. Moore's work will consist of the planting of shrubs and trees and the general beautification of highways throughout the province. He was formerly chief gardener of the Queen Victoria Park Commission of Niagara Falls, Ont.

Loren L. Brown, Vancouver, who has been appointed B. C. Lumber Commissioner for the east, expects to arrive in Toronto during the first week in July and enter upon his new duties. Wm. Robertson, who has been filling the position for some time past, will return next month to Victoria, where he will resume his former connection with the forest branch of the Department of Lands.

Miss Clara Read, only daughter of Chas. P. Read, wholesale lumber merchant, Toronto, and Mrs. Read, passed away recently at the age of seventeen years, after a long illness. She was the only daughter in the family and the funeral, which took place on June 3rd, was largely attended. Six brothers of the deceased acted as pallbearers, three of the brothers being members of the firm of Read Bros., Ltd., wholesale lumbermen, Toronto St.

Stuart Graham and H. Allen Wilson, in charge of the seaplanes of the Laurentide Company, recently visited Gatico, to make a survey of Mr. M. C. Small's station there for the purpose of establishing a temporary aerial base. A large area of timber is to be photographed in that section of the country this summer; in fact the forestry department of the company has mapped out a large photographic campaign this year for the company's limit.

C. W. Murphy has joined the selling staff of the Gall Lumber Co., Toronto, and entered upon his new duties. He spent several years overseas, first in the artillery, later in the naval service of the Royal Flying Corps. Mr. Murphy took part in the Somme and other big "shows" of the war. Previous to enlisting, he was for some years engaged with the Standard Chemical Co. at South River, Winnipeg and Toronto, filling several responsible posts most acceptably.

Messrs. Sewall and Conners, of the James W. Sewall office, timber estimators and explorers, Old Town, Maine, recently returned from an examination of some 20,000 acres of timberlands in the mountains of North Carolina and Tennessee. Mr. B. C. Marsh, of the same office, who has charge of work on a large area in King's County, N. S., reports that the woods there are getting abnormally dry for this season of the year and that fire danger is imminent unless rains come.

J. C. Leigh, for the past three years manager of the Excelsior Lumber Co., 33 Richmond St., West, Toronto, has resigned his position and formed the Leigh Lumber Co., Limited, which will have offices in the Richmond Buildings and handle both hard and soft woods. Mr. Leigh is well known to the industry and has established a good connection in Ontario and other points. The business of the Excelsior Lumber Co. will be continued at the same address as during the past.

The Howard Smith Paper Mills, who recently acquired timber limits in Gaspé, Que., are now erecting a new pulp mill at Cornwall, and these limits will be used to supply the new plant. The wood will be brought up by barges and handled there. The company expect to have an increased production of pulp by October next.

No Timber Left Fifty Years from Now?

C. Price-Green, Toronto, Ont.

A famine in timber and its products, including print paper, unless immediate and far-reaching steps are taken for forest conservation, was predicted lately by C. Price-Green, of Toronto, Industrial Commissioner of the Canadian National Railway, in an address before the National Editorial Association, Boston.

He said there was danger that many newspapers might have to suspend publication soon for lack of white paper.

Before listening to his address the association voted to meet next year at Miami, Florida.

The United States, said Mr. Price-Green, is using one-half the world's supply of white paper, paper, consumption in this country amounting to 5,500,000 cords of pulpwood yearly.

"The newspapers of New York city alone consume the equivalent of over 9,000 spruce trees daily," he continued. "The United States consumes thirty billion feet a year board measure, for lumber. Including lumber, ties, firewood, and for all other purposes, it takes fully one hundred billion feet a year to supply its requirements."

"Eighty per cent. of the standing merchantable timber is privately owned, and 97 per cent. of the annual cut comes from these forests. The total of this standing timber represents something in excess of 2,500,000,000 feet, and, in the opinion of the authorities, at the present rate of cutting this supply would be exhausted within fifty years.

"The United States cannot look to Canada for any alleviation of her situation with respect to sawn lumber. This year we shall supply in one form or another over one-half the demand of the United States market.

"Many firms are establishing in Canada, and many more will come. So far as the paper supply is concerned, I am of the belief that, with sane management and careful cutting, Canada can supply the demand of this continent much longer than has been estimated."

Kingston's Plan to Stimulate Building

While the city of Montreal is still marking time in regard to its housing scheme, while its excessive rentals committee is lying dormant through lack of executive power to back it up, and while the housing problem gets worse because there is no speculative building done, Ontario once more has set the example to Montreal. Toronto led off by getting a housing commission in operation and building over two hundred houses last year, securing more success in their endeavor than the apologists for Montreal's inactivity seem willing to give them credit for. They have not continued operations this year because the rise in the cost of materials and labor would mean that the general taxpayer would have to pay for the additional money that would have to be borrowed to complete houses after the government grant had been expended. They however, did something, and now it is Kingston's turn to put into operation another scheme to help housing along.

The people of Kingston are not going to build under the government aid scheme—they are going to exempt from taxation for five years all houses that are built this year and next year, that are of a value of \$2,500 and up. Calculating the price of an ordinary house to-day at a minimum of \$5,000 this means with taxes amounting to two dollars that the builder of the house will save something like \$500 on each house, and although it may not seem a very big total, yet it enables the householder the better to meet his interest charges during the hard times that now exist, and this is a consideration, when money is so tight. Perhaps five years hence there may be a drop in the high cost of existing, and people settled in their own homes will be able to meet their liabilities and taxes easier than to-day. This exemption of taxation is not the act of the city council alone, it is incorporated in a by-law that has been submitted to the ratepayers and approved by them, showing that the people of Kingston realize the gravity of the housing problem in their midst and are prepared to make a little sacrifice now in order to secure more dwellings and increase the assessable value of their municipality in years to come.

So far as Montreal is concerned there is practically no specula-

tive building being done—all the building activity that is going on at present is for private owners, who are going to occupy them as soon as they are ready. Inquiries of half a dozen real estate agents proved the truth of this. The Marcil Trust Co., and J. A. Davis Co., who specialize in the building of houses for people who will pay the cost of them by instalments in lieu of rent, both state that there is a steady demand from people who are prepared to make a small initial payment and start on the road of good citizenship which ownership points to. Ernest Pitt and Co. are starting to sell houses from plans to be ready in September, and they do not look for much relief in the housing situation unless there is more speculative building done. They state that with all the building activity in Notre Dame de Grace district there are only about fifty houses being built there which were not ordered by people direct, and these no sooner show some semblance of completion than they are snapped up.

The Passing of Mr. McKergow

Many friends in the lumber industry will regret to learn of the death of Mr. John McKergow, president of the Montreal Lumber Co. Limited, Montreal, who passed away last month, shortly after his return from Florida. Mr. McKergow arrived home during a period of chilly weather and contracted a severe cold, from which he did not rally. He had long been identified with leading interests in Montreal and by his courtesy and ability won the confidence and esteem of a large number of friends. By his integrity, faithfulness and devotion to duty he earned a competency that enabled him to enjoy the latter years of his life in comfort. A fine type of a Christian business gentleman the passing of Mr. McKergow is deeply mourned by numerous business and personal associates who appreciated his worth and character and manhood.

Mr. W. K. Grafftey, managing director, succeeds Mr. McKergow, as president of the company, and Mr. Stewart Grafftey takes the latter's place on the directorate. Mr. George I. Dewar, Ottawa, remains in the position of vice-president of the Montreal Lumber Co.

Death of Veteran Retail Lumberman

One of the most successful business men of Kingston, Ont., passed away recently in the person of Samuel Anglin, head of the firm of S. Anglin and Company, lumber and coal dealers. Mr. Anglin was 77 years of age. He was a son of the late Robert Anglin, one of three brothers who came out to Canada from Ireland and settled in the township of Kingston. He became early identified with the lumber and coal business but he took a deep interest in the welfare of the city, serving for many years on the Board of Education. Mr. Anglin was a Conservative in politics. He married Miss Rebecca Harriet Phillips of Kingston, and Sept. 1st next they would have celebrated their golden wedding had Mr. Anglin lived. The last member of his own family, his brother Robert for many years lock-master at Kingston Mills, passed away in February. Seven children survive, one of whom is F. R. Anglin, who has been directing the business of S. Anglin & Co. for a number of years, and is a leading member of the Ontario Retail Lumber Dealers' Association.

At an early age Mr. Anglin took up the lumbering business which was the one of the chief industries of the district. He first established a small saw mill at what is now Battersea, where he gradually developed a business of considerable size for these days. In the early sixties he moved his capital and stock of lumber to the city and entered partnership with his brother, the late William B. Anglin, and for a time devoted his energies to the developing of the business in the district, looking after the sorting and rafting of the timber, and getting it to the mill. This brought him into close touch with all the Rideau points, with the Gananoque River developments and with different points along the St. Lawrence, and his energies soon brought his firm into the forefront. Several tugs were engaged and they continued in the rafting work as long as the supply of logs could be obtained along the Rideau and other waters of the vicinity.

On the death of the late William B. Anglin, in the eighties, deceased absorbed his interests in the firm and carried on the business, being joined by his sons, Francis and Charles, as soon as they reached their majorities. Under their direction the business of the firm has reached its present magnificent proportions, but behind it all was the wise counsel, the sterling abilities and the fine business talent of W. B. Anglin.

The attention of our readers is drawn to our Quick Action Department on page 62 of this issue where the tendency of supply and demand of the whole lumber trade is visualized in the form of condensed advertising.

Too Many Terms Used in Grading

Standardization of Names of Grades Urged to Avoid Confusion and Facilitate Trade

James Charron, of Iroquois Falls, Ont., believes there should be a standardization of grades in softwoods and writes the "Canada Lumberman" as follows:

I have been looking over the markets in several parts of Canada, and while doing so it struck me that the names for the different grades in the various markets must be very confusing to the foreign trade. Especially in England or any of the European countries, it must be quite a detriment to the sale of lumber from Canada.

For instance, the Toronto market starts in with "Good Sides and Good Strips and 1-2 & 3 Cuts." The next grade is called "Mill Run," which, in my opinion, is wrong, because if it were "Mill Run" it should include the "Good Sides and Cuts," as well as the "Box and Culls." So why call it "Mill Run" when you do not mention that the "No. 3 Cuts & Better" are not included, or the lower grades?

Next we have the Ottawa market. They have "Good Sides, Good Strips and Dressing," and next to that "Shipping Culls." Now why should this lumber be called "Shipping Culls" when it is a merchantable board. They have one kind of a cull on one side of a "Box" which is merchantable and another that is not.

Next we have Sarnia. The first grade is "Pine, Common & Better." Now, according to the price and the names of their other grades this must include all lumber better than a "Barn," including "Good Sides," if so, their next grade reads "Cuts & Better." Now where do they get the better grade for the cuts if the Good Sides are included in the Common & Better.

All this must be confusing to anyone not familiar with the different grades and prove quite a drawback to any representative of the lumber trade in a foreign country.

I think the lumbermen's associations should get together and standardized the names of the different grades so that anyone could compare the prices of each grade in the different markets. The foreign trade, when ordering lumber from any of the markets, would then get to know the names we use and know just what to expect.

The following is a list of names for the different grades which, in my opinion, would simplify matters considerably and be more suitable for the grades as they come:

- | | | |
|-----|----------|----------------|
| 1st | would be | Good Sides. |
| 2nd | " | 1, 2 & 3 Cuts. |
| 3rd | " | Dressing. |
| 4th | " | Common. |
| 5th | " | Box. |
| 6th | " | No. 1 Culls. |
| 7th | " | No. 2 Culls. |

Some companies might sell their "Cuts & Good Sides" as they come from the mill; if so they could call this grade "No. 3 Cuts & Better," and the man buying would know all the "Good Sides" were included, or they could sell "Common & Dressing" or "Box Common & Dressing," in the same way. Three inch deals could be sold in the same way or could be called "1, 2, 3 & 4," and "Culls & 1, 2, & 3 Cuts." Culls should be called "No. 1 and 2 Culls," as "Dead Culls" sound as if a man were getting something entirely worthless for his money.

The "Canada Lumberman" would be pleased to see a friendly discussion relating to the points touched upon in the foregoing letter, and particularly in regard to the suggestions of Mr. Charron covering the different grades, in the interest of more uniformity and comprehensiveness of terms which now are widely divergent.

Logging and Lumbering Trade Sluggish

Conditions in logging and lumber manufacturing in British Columbia evince a sluggishness never before experienced in the history of the province, according to authoritative reports, says a recent despatch from Vancouver:

The export trade in manufactured lumber is only fairly well maintained at present, while comparisons made since the beginning of the year, show a decided falling off in all branches of the lumber industry.

At no time in the history of the lumber industry has there been so many vessels available, yet, the demand has slackened to such an extent that many boats are said to be laying idle.

A decided weakening has also become evident in the home market, due, it is said, to the high cost of material, and labor in the east holding up new construction.

Manufactured lumber has taken a drop of \$8 a thousand feet, though the price of logs still remain steady. The shingle market

is very weak. There is said to have been a drop of 30 per cent. in the price of shingles during the past three months and a large number of shingle mills already have closed down, which is also due to the high price of logs and the low market price of shingles. It is expected that the next thirty days will see the market on shingles stiffen again.

Logging conditions this year are said to be far from their former standard, and have fallen far short of anticipations. It is stated on good authority that a number of mills along the lower mainland will close down for a few weeks unless the scarcity of logs is relieved and the prices are brought to a more regular standard than are now prevailing.

It is probable many of the mills will use this period of inactivity to undergo their annual overhauling of milling machinery.

Wonderful Music from Steel Saw

Most everybody knows that Atkins silver steel saws are highest in quality as regards material, temper and workmanship, but few know that the most wonderful music can be played on them. This is being demonstrated in New York on the New Amsterdam hotel roof, by Sam Moore, a musical prodigy of extraordinary ability, who is astounding the New York populace by playing an Atkins saw with a violin bow, accompanied by Mde. Anna Marie De Milita (harpist).

At the age of five Mr. Moore started taking lessons from his father on the violin and later finished his musical education under Professor Kalor of Macon, Georgia. Here he also took up a regular line of literary studies. He kept up his music only in a small way by tinkering with every conceivable thing that would make a tone,

Making music on an Atkins saw

One day he saw an old negro put a saw across his knees and tap it gently with the handle of a file, and upon hearing the clear mellow tone, he purchased a new saw and began a course of self-instruction to play it, soon becoming proficient enough to keep the neighbours awake at nights.

In playing the saw he first used a pencil with a rubber tube on the end, but later discovered that a violin bow drawn across the back of the saw while bent back and forth, would make a tone unequalled by any instrument. After spending years to develop this novelty Mr. Moore took it to New York and sold his services to Zeigfeld. Mr. Moore says he has examined thousands of saws but none of them are equal in tone to Atkins, because Atkins saws are quality clear through.

Reviews Works in the Lumber Camps

The superintendent of the Shantymen's Christian Association, William Henderson, was in Montreal recently, and gave a lengthy resume of the work done by the association since its foundation twelve years ago. Mr. Henderson quoted numerous incidents which led to conversions in the lumbering camps in this country, in emphasizing the necessity for teaching the gospel in the far West.

He pointed out that the 24 missionaries who had given up their time to work amongst the lumberjacks, had visited 640 camps and had the opportunity of speaking to over 33,400 men, 6,780 of whom were French and 8,000 foreigners.

Quebec Retail Lumbermen Hold Annual

The annual meeting of the Retail Lumber Dealers' Association of Quebec City, was held recently and enthusiastic reports were presented for the past year. The Association has made good progress and has carried out many progressive moves in the interest, welfare and co-operation of the trade. Previous to the dealers coming together, there were various unprofitable practices carried out, among them being free delivery. Since the Association was formed there has been a uniform charge for deliveries and a mutual understanding has been reached on various other problems. All the old officers were re-elected as they have done their work faithfully and well. The prospects for the coming year are regarded as very bright.

The officers for 1920 are:—

President—L. C. Marquis, Marie-de-L'Incarnation St., Quebec.

Vice-president—Ls. Hamel of E. T. Nesbitt, Reg'd., 10th Avenue, Limoilou, Quebec.

Secretary-treasurer—J. Onés, Chalifour of O. Chalifour, Inc., 126 Prince Edward St., Quebec.

The directors are—O. A. Gignac of J. H. Gignac, Ltee., 142 De l'Eglise St., Quebec; Joseph Lefrancois of The Jos. Lefrancois Co. Ltd., 212 8th Avenue, Limoilou, Quebec; Napoleon Gignac, 68 Lelemant St., Quebec.

Lumber Associations and Cancellation Problem

We believe that the great majority of those on both the buying and selling side of the lumber trade agree that the practices of cancelling orders by the buyers when the market is falling, and of delaying shipment beyond a reasonable time when the market is rising are deplorable, particularly when it is evident that they are indulged in for the purpose of profit. The retail buyer who cancels an order when the market is falling, because he has an opportunity to buy the same stock at a lower price, and the seller who cancels or delays shipment on a rising market, because he can sell the same stock to better advantage are equally to be criticized.

Complaints from both sides of the market are not infrequent at times of rapidly changing prices, yet, we believe that much more has been made of the offence than the number of cases actually warrants. The number of retail yards in the country runs up into the thousands, and yet it is probable that the average number above given will not average more than a very small percentage in the course of a year. Even in times like the past two months when wholesale prices have been dropping materially, the number of cancellations is very small in proportion to the total number of cars for which orders have been placed. And, last year, when the market was advancing rapidly, we do not believe the proportion of cars upon which shipment was delayed, or cancellations made, by shippers, because they could sell the same stock at higher prices, was any greater.

A considerable amount has been said in the way of commendation for those associations of retailers and shippers who have gone on record as opposing these practices by their members with a penalty of expulsion, and we do not desire to detract in any measure from the credit due them for the stand they have taken; but it does not necessarily follow that those other associations that have not taken this step have refrained from doing so because they approved of these practices, or because they did not feel warranted in binding their members not to indulge in them.

The secretary of one large organization of retailers has said that, in the case of his association at least, there is no need to come out

openly in opposition to the cancellation evil, for his members are not practicing it to an extent that would warrant such a stand. To oppose it would, he says, be a tacit admission that the members of the association needed disciplining, whereas there is no such need.

It has been well said that the country that is least ruled, is best ruled; that the fewer laws of negation there are, the better will be the observation of affirmative practices. In the association field, the parallel holds. It is much better to have the members know and understand the things they should do than to formulate a code of rules against the things that should not be done. The business man who indulges in immoral or unethical practices is that kind of a man, and he cannot be restrained by law or rule so long as he believes he is smart enough to get away with it.

So far as concerns the association of sellers and of buyers, we believe that they are just as much opposed to these practices as though they came out and said so. They could probably point to the records of their members in the observance of the ethics of trade and answer any challenge of good faith. Further than that, it is probable that any shipper or buyer who suffers from the cancellation evil and who takes it up with the offender and fails to get satisfaction, can refer it to the officials of the association to which the one who has cancelled belongs, and the resulting pressure would remove the evil. Or, if the matter is taken up directly with the offender by the association to which the other party to the deal belongs, he will undoubtedly see the light, and complete the contract.—Mississippi Valley Lumberman.

Canadian Woods Displayed in London

Wm. B. Stokes of the Forest Products Laboratories, Montreal, who will be in charge of the Canadian exhibits at the British Empire Timber Exhibition, which will be in Holland Park Rink, London, Eng., from July 5th to the 17th, writes the "Canada Lumberman" as follows: "I am enclosing a list of Canadian woods to be exhibited as boards at the British Empire Timber Exhibition. Each board is 8 ft. long and each species is more or less suggested by the trade associations—a few species being added because of their existence in quantity, although not sold as lumber, such as balsam, fir, eastern cedar and tamarack. Other woods having special uses will be represented by small specimens or products.

Here is the list: White pine, Douglas fir, Western white pine, balsam fir, red pine, cedar, jack pine, Western cedar, Western yellow pine, aspen, tamarack, paper birch, Western larch, yellow birch, white spruce, beech, Engelmann spruce, white elm, Sitka spruce, rock elm, hemlock, sugar maple, Western hemlock, basswood, white ash.

The above names are those adopted by the Forestry Branch and will be supplemented by the commercial names.

Extensive Improvements to Big Plant

Extensive alterations and additions are being made to the plant of McLachlin Brothers, Arnprior, Ont., and the work is nearing completion. No. 4 band mill began operations last week and No. 3 band mill will start about the first of July. The work is being carried out under the direction of Lieut.-Col. Johnson. The whole plant, when completed will have a capacity of a hundred million feet per season and in design and equipment embodies a number of new features. In an early issue the "Canada Lumberman" expects to present an illustrated description of the changes which have been carried out.

Grinding Band Mill Wheels

By J. D. GeBott, Big Rapids, Mich.

In this article it is the purpose of the writer to call attention to mill men operating band mills large and small, and the absolute necessity of keeping the wheels in proper condition. One of the great essentials about any band mill is to keep the mill in line and wheels properly ground. A band mill cutting dirty timber should have the wheels faced off at least every ten to twelve months day run. Sometimes a mill will run longer; depending, of course, on the cleanliness of the logs and the hardness of the material used in the manufacture of the wheel. Then again, scrapers improperly adjusted to the face of the wheel will wear them much faster than the natural wear of the saw. The lower wheel wears much faster than the upper one, as nearly all the dirt from the log drops between this wheel and the saw, thus cutting away the face of the wheel much faster than

see that there is no lost motion in the boxes, as the shaft should lift firm against the bearings with the strain on the saw. It is practical to always grind the lower wheel first. Be sure and clean the wheels of all grit and dirt and grind down the high places first. In grinding the upper wheel be sure and lock the straining device so that there is no vibration in the wheel while grinding. Strain the saw as you would for sawing. If blank blade is used, do likewise. All top wheels should have inside scrapers. These can be easily arranged from the upper journal bolts by having them made long extending down to the inside of the wheel and turned in and flattened so as to allow a brush or stiff piece of leather to be fastened thereto, which will keep all sawdust off the inside of the wheel keeping the wheel clean and in balance. When you stop to change saws, there is no dirt falling from the wheel as nothing can collect on the wheel. It makes a much better running mill and a cleaner place for the sawyer to work. The wider the saws the better condition the wheels must be kept in order to get the cut out of the blade. If your wheels are not right you have to run the saw head off the wheel thus losing the cutting capacity; and unless you keep the wheels right, you might as well run a narrow saw, as you must keep the saw back on the wheels in order to keep the tooth edge stiff when entering the cut. This is very often the cause of bull-heads. Help your filer and sawyer by helping them to keep the wheels in proper shape, and they will make better lumber and more of it.

The Retirement of Veteran Lumberman

The largest and most important pulp and timber deal in the history of the industry in Canada, by which the interests of the W. C. Edwards Company and the Gilmour-Hughson Company, of Ottawa, will become part of the enormous properties controlled by the Riordon Pulp and Paper Company, has just been consummated. The amount involved in the merger is said to be \$60,000,000, and the transaction has been consummated by I. W. Killam, of Montreal, president of the Royal Securities Corporation, Montreal. The consolidation of the Edwards and Hughson businesses will give the new company control of some 12,000 square miles of property containing many millions of feet of high grade timber and pulp wood.

Under the heading "Consolidation of Lumber Companies Means Retirement of Senator Edwards," an Ottawa paper pays the veteran senator and pioneer lumberman the following tribute:

The merging of the W. C. Edwards Co. with the Riordon Pulp and Paper Company means the passing from active business of one of the pioneers of the lumber industry of Ottawa and the Ottawa Valley. He is one of a group of remarkable men who made Ottawa the greatest lumber centre on the continent. Senator Edwards entered the lumber business in 1868 at the age of twenty-four when he built his first mill at Rockland. On the occasion of the fiftieth anniversary of the founding of the firm in 1918 Senator Edwards told of the beginning of the enterprise. "It was on November 8th, 1868," he said "that I embarked on the old steamer Caroline of the Ottawa Forwarding Co. at Thurso, where I had been formerly employed. It was a bleak, cold morning that I arrived at Rockland single-handed and alone. The tools I carried with me were two pick axes and three spades. With the assistance of two men I dug and prepared the foundation of the first mill." Senator Edwards has engaged in, and knows every side of lumbering from cutting and handling logs to manufacture and sale.

Big Possessions by Merged Interest

According to official information the consolidated businesses of the Riordon, Kipawa, Ticonderoga, W. C. Edwards & Gilmour & Hughson Companies possess approximately twelve thousand square miles of timber limits, containing about twenty-five million cords of pulpwood, one billion feet of standing pine, over one hundred and fifty thousand horsepower of water-power developed and undeveloped, a pulp and paper outfit of approximately one hundred and fifty thousand tons per annum, and an annual pine lumber output of approximately one hundred and twenty-five million feet board measure.

As far as is known these properties represent the largest available supply of pulpwood under one control, and one of the most valuable remaining holdings of white pine in the world.

The Gilmour-Hughson Company possess 3,000 square miles of timber, principally in the Gatineau Valley, or a little more than half the Edwards holdings. The company produced 20,000,000 feet of lumber last season, 22,000,000 in 1918, and 25,000,000 in 1917. In 1918 the company produced 3,250,000 pieces of lath and 1,000,000 shingles.

A clean yard is better than fire insurance. The latter may save you from financial loss, but it will not restore your stock of lumber.

An efficient band wheel grinder

the upper wheel. This causes the front of the wheel to be considerably smaller than the back edge, thereby allowing the saw to become slackened on the tooth edge which causes it to lose its efficiency, so that it cannot be expected to stand up and do the work as well as when the wheels are in proper working condition.

In looking at a mill to see if the wheels need attention, one usually looks at the upper one, this being the handiest to get to. If you will examine the lower wheel, you will find it about three times as badly worn as the upper one; so when you have an idea that the top or upper wheel needs grinding, can you imagine the condition of the lower one? A band mill wheel wears in two places only: on the extreme front edge, and back about three inches. Then where the back of the saw rides the wheel, you will find a hollow place, then high from this point to the back ridge. The back of the wheel never wears, as the saw does not touch this part of the wheel. This being the case, it is necessary to keep the back of the wheel faced down to the same size as the front, so that both edges measure exactly the same with a steel tape line. Some filers like a slight fullness in the wheel which is not at all objectionable if put in the wheel at the proper place. Usually a perfectly flat wheel is preferable. In mills using upper steel wheels it is best to leave a slight crown as steel wheels are more or less liable to show hollow if you grind them too flat owing to the contraction of the spokes. On double cutting saws a little crown can be left in the centre of the wheel as the saw remains in the same position on the wheel at all times, while a single cut keeps traveling ahead on the wheel as it gets narrow from usage.

To grind a mill properly, first have a good machine, and see that it is square and level with the wheel. Level the lower wheel and

How One Per Cent Tax Operates in Lumber Line

Since the last edition of the "Canada Lumberman" considerable change in the Government tax situation, so far as it relates to the retail lumber yards and planing mills, has taken place. It was stated recently that all retail transactions were exempt and it looked as if the retail lumbermen would not be called upon to collect the charge. This has all been changed and a late ruling received by the secretary of the Ontario Retail Lumber Dealers' Association from G. W. Taylor, Assistant Deputy Minister of Inland Revenue, Ottawa, says:

"In reply to yours of the 26th ult., I have to inform you that a firm operating a planing mill is classed as a manufacturer, and all sales are subject to the tax of 1 per cent. The tax of 1 per cent. on lumber is payable to the price f.o.b. shipment, without reduction or alterations on account of freight.

"If a retailer sells material to a contractor, such sale is subject to the tax of 1 per cent."

In a letter to the "Canada Lumberman" Mr. Taylor says:

"All sales by manufacturers to wholesalers are subject to a tax of 1 per cent., and all sales by wholesalers to retail dealers or to other wholesalers, are also subject to the tax of 1 per cent. All persons owning a planing mill or sash and door factory are classed as manufacturers, and all sales by them are subject to the tax of 1 per cent. If a lumber merchant is a mill owner and takes a contract to supply material, all material supplied by him shall be subjected to 1 per cent."

It appears as if retail lumbermen will be subjected to the tax of 1 per cent., on every transaction, as practically the bulk of their sales are to contractors or sub-contractors, who are regarded as retailers selling the consumer, as pointed out in Class 6 of the subjoined letter from Mr. Taylor, Assistant Deputy Minister of Inland Revenue.

Copies of the following have been sent out by the Canadian Lumbermen's Association, Ottawa, to its members, and also by the Ontario Retail Lumber Dealers' Association to those belonging to that body.

(1) The tax is primarily one upon materials, and is not intended to be a tax upon labor. Labor used in the installation of materials is not taxed, but tax does apply to labor used in the manufacturing of materials.

(2) Art. 7 of the Resolution provides for a tax on one per cent (1%) to be collected on sales by manufacturers and wholesalers, this tax to be paid by the purchaser to the wholesaler or manufacturer at the time of sale.

(3) Contractors and sub-contractors will have to pay one per cent. (1%) tax on materials used by them.

(4) Products of the soil, such as sand, gravel and unprocessed stone, are not taxed. Lime, cement and stone which is quarried, crushed or which passes through any process, come under the tax.

(5) Tax on materials on everything shipped or delivered on or after May 19th, 1920, unless it can be proven that the complete price was paid in advance of that date. Partial payment is not sufficient.

(6) Building contractors and sub-contractors, though technically manufacturers, are regarded for the purpose of the tax as retailers, selling the consumer. Tax is not chargeable on the amount of contract, either between sub-contractors and contractor or between contractor and owner.

(7) If a contractor or sub-contractor manufactures materials for his work, such as metal cornices, sash and door frames, iron railings, etc., he is required to pay tax on cost of manufacture including labor. He is not required to pay tax on installation.

(8) Provincial and Dominion Governments are both subject to the tax.

(9) Lumber jobbers are regarded as wholesalers and their sales are therefore subject to a one per cent (1%) tax.

(10) Dealers who make sash, doors, etc., are manufacturers and the sales tax applies.

(11) Planing mills are manufacturers. Sales to wholesalers are subject to the tax also to a further one per cent tax when sold by wholesaler to contractor or consumer.

(12) In the opinion of the Inland Revenue Department, contractors ought to be able to recover tax from owners on contracts made previous to May 19th, 1920, for goods purchased or delivered after that date. This is, however, a ques-

tion of law. On further contracts, the tax should be provided for.

(13) Copies of all rulings made by the Department of Inland Revenue have been sent to all local collectors, and consultation with these officers will probably save much time and expense in securing information required.

On the New Turnover Tax

The following questions submitted to the Toronto office of the Department of Inland Revenue have been officially answered as follows. The replies will be read with interest:

If a manufacturer charges the wholesaler 1 per cent. on his invoice is it the intention of the Act that the wholesaler pass the tax of 1 per cent. on his invoice to the retailer?

Ans.—Yes.

Is it the intention for the wholesaler to pay an additional tax of his own to the Government of 1 per cent. on the same goods as the manufacturer has already paid 1 per cent. to the Government on, or will the wholesaler charge his customer with 2 per cent?

Ans.—One per cent.

How would the tax effect one wholesaler selling to another wholesaler? For instance, the first wholesaler buys from the manufacturer, the manufacturer has invoiced him with 1 per cent. and he has paid it, does he pass this tax along to the other wholesaler, and does the other wholesaler pass it along to the retailers, or do the manufacturer and both wholesalers have to pay the 1 per cent., making three payments of 1 per cent. on the same goods?

Ans.—Yes (One per cent. in each case).

If a shipment is sold at a delivered price, freight included, is the wholesaler or manufacturer to charge the 1 per cent. on the delivered price, or f.o.b. mill price?

Ans.—F.O.B. mill price only.

If a wholesaler has lumber which is still in the manufacturers hands, but has been invoiced by the manufacturer at the beginning of the year, or prior to May 19th, and paid for by the wholesaler, and is in the wholesaler's possession in the manufacturer's yard, should the manufacturer charge the 1 per cent. on this stock when it is being moved? If your answer be no, does the wholesaler charge the tax on his invoice to the customer, and the wholesaler remit to the Government? Ans.—(1) No; (2) No.

When we send credit note should we credit tax back to customer for the amount of credit note?

Ans.—Yes.

Will Collect the Tax From All

At the regular monthly meeting of the Toronto Retail Lumber Dealers, held recently, it was decided that the number of working hours in the various plants should be nine per day. There has been an agitation in some quarters on the part of workers for an eight-hour day but the lumbermen unanimously agreed that nine hours would be the minimum.

The 1 per cent. turn-over tax was discussed in all its phases and in view of the recent interpretation from the Inland Revenue Department, Ottawa, it was decided that the tax would be levied on all transactions. While there may be some exceptions to the collection of it in the case of material sold to a farmer, speculative builder, etc., the department distinctly states that goods sold to a contractor or sub-contractor shall bear the 1 per cent. tax. This constitutes the bulk of the business of the average lumber yard in Toronto and the bigger cities, and if any discrimination was made between customers, it might lead to all sorts of complications and a great deal of detail. This will be eliminated by a universal charge of 1 per cent.

Then again, the term "contractor" is subject to such a wide interpretation that it is difficult to tell exactly who come under this class, and for the present, at any rate, 1 per cent., will as stated, be added and collected on all sales. It was decided by the retailers that no separate slips would be made out but that the books of each man would be shown and an affidavit taken regarding the amount collected on all sales and the correctness of the returns to the Inland Revenue Department.

Home building has come to be one of the finest "arts of peace."

"Knowledge is power." Know the needs of your community and you will hold within your grasp the power of supplying those needs.

Lumbermen Oppose New Ry. Tariff

Desire to See Several Amendments and Will Appear
Before Dominion Board at Ottawa

A deputation from the Wholesale Lumber Dealers' Association, Toronto, will visit Ottawa on June 15th to protest against the proposed new rates for weighing cars, etc., as published recently in the Canadian Freight Association tariff No. 14. The hearing was to have come up on the 1st of June but was postponed until the 15th. The new tariff, which relates to the weighing of cars, elimination of allowances, alteration of estimated weights, etc., was recently discussed at the Wholesale Lumber Dealers' session in Toronto. They decided that they, along with the Canadian Manufacturers' Association, would co-operate in resisting the new regulation. At the hearing, which will take place before the Dominion Railway Board on the 15th, A. C. Manbert, (chairman of the Wholesale Lumber Dealers' Association), A. E. Eckardt, (chairman of the Transportation Committee), D. C. Johnston and others will press for certain amendments.

The following are the amendments the Association desires to Tariff No. 14.

Responsibility for Scaling: Page 7 No. 1.

If delivery agent is unable to give consignee scaling particulars of a car that has originated at a track scale station, or has passed en route a track scale, the Railway Company must accept payment of freight on the basis of minimum weight. The Railway Company to have the right to make amended claim as soon as scaling particulars are ascertained.

Weights—How Ascertained: Page 7 No. 3

Section B: Sub-section 1 and 2.

The consignee shall have information on the advice note showing under what conditions the car was scaled.

Section D: Page 7.

We wish to have a statement added to this section, which will show who is authorized to make the change referred to.

Section J: Page 8.

We desire to have further specification made as to how the consignee shall have access to information as to when the tares of the cars were verified.

Section K: Page 8.

"A record should be kept at each track scale showing the gross tare", etc.

"We want the word "must" inserted instead of the word "should."

Section F: Page 10 No. 8.

Cars Not Weighed on Track Scale

"Shipper in all cases being asked to state on Bill of Lading the actual weight loaded."

The word "actual" should be changed to "estimated."

Prepaid Freight

No. 12 (Page 10)

A new regulation is required as follows:

Compulsory Refund of Overcharges

If, on car being weighed, it is found the weight is less than that shown in billing, agent at track scale station must correct weight and charges, billing forward the overcharge, for refund, sending correct sheet to forwarding agent and audit department. Agent at track scale station must also notify forwarding agent, by wire, the actual weight, making notation on waybill that this has been done. On receipt of this information the forwarding agent must refund to shipper the overcharges, notifying the agent at destination (also by wire) when this has been done.

Charge for Weighing Cars on Track Scales

These charges are too high. They have been increased considerably and a reduction should be made. (Page 11—Nos. 14, 15, 16 and 17).

Weights to Cover (New)

When a shipper makes a request for an empty car to be placed for lading, the understanding is that a standard car is required. If, to suit the convenience of the railroad company, they place a car of larger capacity, the minimum for a standard car shall apply.

Weighing of Empty Cars

Page 13.

Why apply \$1.00 per car on coal only? We want it applied on lumber shipments also.

Allowances From Track Scale Weights

No. 24 (Page 13)

We ask for information why this allowance should apply to ship-

ments in Canada only. We want it made applicable to all shipments.

For stakes, strips, braces, etc., for lading flat or gondola cars, the amount should be not less than 850 lbs.

No 4 (Page 13)

This regulation should be amended as follows:

No. 4A.

"For foreign matter, not part of the loading, such as snow, ice, manure, gravel or refuse, in cars at point of origin, an estimated allowance is to be made by the agent adequate to the actual conditions in each case and such allowance is to be noted on the Bill of Lading."

No. 4B.

"For foreign matter, not part of the lading, such as snow, ice," etc., "on top of cars" an estimated allowance is to be made by the weighman at time of weighing and noted on Bill of Lading.

Weighing of Cars For Tares

No. 32 (Page 17)

"Wooden and steel underframe should be reweighed and remarked at least once every twelve months during the first two years the car is in service, and thereafter once every twenty-four months."

We want the word "should" changed to "must" and the time changed from "twenty-four months" to "twelve months" and information that this has been done to be available to consignor.

Estimated Weights to be Used When Actual Weights Cannot be Ascertained

No. 33 (Page 19)

The weights outlined here are too high. Would suggest that the railways and shippers interested should hold a conference and come to an agreement.

Ontario Retailers May Go North On Trip

The annual midsummer outing of the Ontario Retail Lumber Dealers' Association will be held from July 30th to August 3rd. Various routes are being considered by the directors and several objectives have been proposed. One which seems to be looked upon with a large amount of favor at the present time is the proposed trip to North Bay and then by steamer to various points on Lake Nipissing and the French River. John Ferguson, Mayor of North Bay, has written Secretary Boulton of the association, assuring him that the northern town would gladly welcome the visiting lumber retailers and every accommodation would be at their disposal. There are several lumber and pulp and paper mills within a reasonable distance, and the retailers will, no doubt, pay a visit to these plants. Further particulars will be announced in the near future.

Says B.C. Mills Will Have Good Season

W. J. Lovering, wholesale lumberman, of Toronto, who returned recently after spending several weeks among the mountain and coast mills of British Columbia, reports that the prospects for a large cut throughout the Pacific Coast province are very bright. He believes that the output by the end of the present year will be greater than that of 1919.

Mr. Lovering and others purchased the plant, limits and logs of the Yahk Lumber Co. at Wasa, which is located a few miles from Cranbrook. The mill is equipped with a circular saw and all accessories, and has a cutting capacity of about 40,000 ft. per day. The chief timber sawn in Western white pine. It is possible that the mill will be operated under the name of the Lovering Lumber Co. Wm. Saunders, formerly superintendent of the Lake Rosseau Lumber Co. at Boakview, Ont., has gone west and will act in a similar capacity in connection with the plant at Wasa. Mr. Lovering will give the new industry considerable personal attention and states that the cut this season will be fully up to last year.

Discussing the general situation in British Columbia, while there is a scarcity of logs at many points, and production costs are unusually high, Mr. Lovering reported that the demand for shop lumber, or the better grade, is quite active, and there is no prospect of a decline in price. On some of the cheaper lines there had been a reduction of a few dollars at the mills. The shingle market was temporarily unsettled and prices had taken a decided drop. A general reaction was setting in and now the tendency is in the opposite direction on most lines of forest products. Some mills, which found that they could not turn out shingles profitably at the prevailing figure and pay the top-notch price for cedar logs, had either shut down or were only running part time or with part of their equipment. Mr. Lovering believes that shingles will shortly get back to normal, as well as other forest products.

Today, when everything is high, you must offer something else besides price to secure trade—and that something is service.

Mr. Power Speaks on Car Shortage

W. Gerard Power, managing director of the River Ouelle Pulp & Lumber Co., St. Pacome, and former president of the Canadian Lumbermen's Association, states that the cut of his company will be about the same as that of last year. They had a good drive of all their logs this spring and manufacturing conditions at the present time are fairly favorable. When starting their mills this season the company naturally advanced all wages, and, while all plants are being operated at full time, there are no men to spare at any of their establishments. Mr. Power says that their worst difficulty at present is trying to get empties to take care of their American shipments, and although they have been working on this matter for months, they are practically getting no foreign cars to handle these orders.

Great Britain Faces Newsprint Shortage

An acute shortage of newsprint is predicted in Great Britain, according to reports received by the Commercial Intelligence Branch, Department of Trade and Commerce, Ottawa, from Trade Commissioner, J. E. Ray, of Manchester. Mr. Ray says that Great Britain may, in the near future, experience a great scarcity of newsprint, which is likely to be reflected in a diminution of the size of the daily papers and advanced prices of the same. The shortage is attributable to the action of the Norwegian Government in requiring the manufacturers of their country to supply newsprint to the home newspaper publishers at a price below cost. A refusal will entail an embargo on exports. Should the latter cease, Great Britain will be forced elsewhere and will, at the same time, be compelled, according to word received from Commissioner Gray, to bid against France in an open market as the French papers draw their supplies of newsprint almost exclusively from Norway. There are about fifty paper mills in Norway producing approximately 125,000 tons of newsprint, the greater portion of which is exported.

Montreal Business is Picking Up Some

As a whole, the Montreal market is satisfactory. For a time business was inclined to be on the dull side, but it has picked up. The position generally has not changed to any extent. The men who view the situation with a feeling that there is likely to be a break are in the minority; they are apprehensive that the demand will not keep pace with the new cut, and that prices will drop because of the necessity of disposing of the lumber—in other words, there will be few buyers and many sellers. They, too, can see no profit for the wholesaler in the prices being asked by the mills. On the other hand, most wholesalers view the market with absolute confidence. The general business conditions are all in favor of values being maintained; the new cut is likely to be of such an extent that it will only supply the ordinary demands; and there is every reason to believe that Canada will be comparatively free from serious labor troubles. Certainly, the outlook for hardwoods is optimistic; the lumber is scarce, and the demand very insistent.

Trade locally is fair. The Montreal building permits for last month amounted to \$1,667,383, an increase of \$397,948; while for the

five months the total was \$61,085,034, a gain of \$3,932,027. The outlook for the balance of the season is good; the labor situation is satisfactory, although some sections of the unions are still complaining—particularly the carpenters and joiners—and are asking for higher wages. The most serious drawback is the shortage of general building supplies. Firms dealing in these commodities state that they have more orders than they can fill, and there is no likelihood of any material alleviation of the situation.

The B. C. section is now much stronger, and there is a considerably better demand for lumber from the Coast. The number of cars in transit is very small.

The American market has revived somewhat. The great difficulty is to secure sufficient foreign cars.

Exports to the United Kingdom are moderate. Advices from England are to the effect that the prices there, particularly for spruce, have fallen away to a considerable extent. This is likely to effect shipments from this side, as with the high freights prevailing, there is no inducement to export. Freights are too stiff, and lumbermen complain that they are likely to result in the curtailment of business. Canada has to compete with the Scandinavian countries, from where the freights to the United Kingdom are much lower than those from this side.

Believes Western Conditions Will Be Adjusted

H. J. Terry, of Terry & Gordon, Limited, Toronto, and Vancouver, who returned recently after spending several weeks in British Columbia on a business trip, reports that stocks on the average are low with both the Mountain and Coast mills. Of course, there are some exceptions but owing to heavy shipments across the border when the rush was on some weeks ago and the demand was excessive, a number of mills were practically sold right up to the saw. While there has been a decline in prices due to the embargoes relating to shipments to the other side, there was a growing feeling that conditions would right themselves in the near future. Manufacturers could not go on meeting the constant increases in mill wages, better housing for employees and the high cost of logs and sell at quotations which have been in effect of late. Mr. Terry states that the requisitions from the Prairie provinces will depend very much on the character of the crops this summer and at present the prospects are bright for a bumper yield. The growth in every section was coming on admirably and, if expectations in regard to the harvest are realized, the demand will be enormous. Many shingle mills are now losing money owing to the temporary sag in prices and all purchasers of B. C. forest products at to-day's prices stand to gain by the conditions which prevail just now. Due to excessive production costs the manufacturer would have to get more for his output or some of the mills would have a rather uncertain future financially. In clears, uppers and finish, values are holding better than on cheaper grades. The shingle mills have not large stocks on hand and do not feel disposed to carry expensive material in view of the present slump. On the whole, the industry in British Columbia is fairly optimistic in spite of the rather sluggish demand at the present time.

The crew at the Wayagamack Pulp & Paper Co., Three Rivers, Que., lately established the very remarkable record of cutting 104,171 ft. of lumber in 9½ hours, using one double cut Waterous band mill, Waterous carriage and Waterous circular re-saw.

This cut was made from logs only 13 ft. in length, instead of the usual 16 ft. The lumber was one, two and three inches thick and was all well cut. The names of the crew making this record are Honore Beland, sawyer; Frank Gaulin, filer; and Edouard Hamel millwright.

New Lumber Enterprise in Rimouski

Mr. J. Henry Poulin, of Montreal, has been appointed manager of the Rimouski Lumber Co., Limited, of Rimouski, Que., and has entered upon his new duties. This company was recently incorporated under a federal charter and has purchased a planing mill at Rimouski which will be remodelled and enlarged, with the latest equipment for milling and a capacity of 150,000 feet per day. The company will shortly invite tenders for the construction of a new building, which will be of first class construction and Rimouski will then have one of the most modern mills in Eastern Canada. Mr. Poulin has interested New York and Boston capitalists in the enterprise in which he himself is largely concerned financially. The company is a private corporation and will soon enter the wholesale lumber business, making a specialty of dressed lumber.

The Empire Timber Exhibition

With a view to exploiting the timber produced in all parts of the British Empire, the Department of Overseas Trade is holding an Empire Timber Exhibition at Holland Park Skating Rink, W., from July 5th to July 17th next, says the "Timber Trades Journal" of London, England. The Timber Trade Federation are very anxious that the fullest support should be given to this undertaking, and a circular has been issued to timber merchants requesting those interested in British Empire timbers to take space at the exhibition for the purpose of showing material or manufactures of Empire productions. The classification will embrace (a) specimens of timber grown within the British Empire, (b) articles manufactured from timbers grown within the British Empire, and (c) wood pulp contained from timbers grown within the British Empire. The great idea of the exhibition is to bring prominently before architects and inspectors the full range of Imperial-grown timbers, and especially those kinds which are only slightly known in this country. The extent of our resources is certainly not yet explored, and in India especially there appear to be many fine varieties of wood which have not hitherto had much commercial value. All further information that may be required is obtainable from the Department of Overseas Trade, at 73 Basinghall Street, E.C., and we would recommend all firms who have any exhibits not to lose this opportunity. In the future all timber, both hardwood and softwood, will have a brisk market, and for years to come the demand must exceed the supply. There should, therefore, be scope for new varieties which have not previously been put upon the market.

The Greatest Need to Cure Unrest

America's great need to-day is a greater number of home-owning families. It is the only real antidote for our natural unrest and extravagance, says C. H. Ketrledge of Evanston, Ill. As has been well said: "No I. W. W. owns his home." The most radical of the striking workmen in industrial centres are the boarders and room renters. Men owning their house and lot are the most conservative in the matter of striking. We need more stabilized conditions in our industries. Give the workmen a chance to own their homes and stable conditions will result. Fewer landlords and more farmers owning the land they work will put new life into our agricultural industry and take out more materials from the lumber yards. A few large land owners may have fine places in the town, but a greater number of small farmers working their own land is of far greater benefit to the town. The "own your home" movement that was begun by the lumbermen a few years ago seems to have received a check and the campaign for it has lagged, doubtless for the same reason that all building has slowed down. Nevertheless, it should continue to be a principle object with the lumber industry to foster it and devise means to make it practicable.

I believe that the establishment of building and loan associations in the different counties will do more to further this object than any other plan. There is a probability that the government farm loan measure may be declared unconstitutional by the Federal Supreme Court on the grounds that government cannot appropriate money for private use. If this should prove to be true, there will be a greater opportunity for these associations than ever as farmers could obtain funds from them for building purposes, and give them a chance to turn around in paying for it.

There is no line of business but that is suffering to a greater or less extent from car shortage and the measure of our transportation facilities is the degree of the country's prosperity. The tremendous growth of the country's business during the past five years finds us with practically less railroad equipment to handle it than existed before the war. This condition is the most serious menace to business that we have to-day. Whatever may be done to relieve

it cannot possibly be adequate to business needs this year. Twenty per cent. of the old wheat is still in storage on the farms and in the elevators, and with the new crop shortly coming along, the prospects are that its course to the elevators and mills will be blocked by what is left over from last year. The freight car supply may be measuring the price of bread next summer.

With this congestion that is not imaginary but actual, a good many farmers will be up against it for storage room on their farms for this season's crop. This is the opportunity for the country dealers to get busy looking after the needs of their respective localities in this regard. Granaries and corn cribs will be needed as they have not been for years, and will be for two or three years to come, for this is not a temporary condition, as it will take a long while for railroad equipment to get caught up with the needs of the country. It would be a good idea to get out in the country and take an inventory of the grain storage room on the farms and the probable needs for taking care of the coming crop. You will discover later on this is no false alarm.

New Position for Mr. Edgecombe

G. H. Edgecombe, Ottawa, who has been appointed surveyor of forest resources for the Commission of Conservation, Ottawa, and has entered upon his new duties, is a son of A. C. Edgecombe, who is a prominent carriage manufacturer of St. John, N. B. Mr. Edgecombe graduated in civil engineering at the University of New Brunswick in 1908 and in Forestry at the University of Toronto in 1910. For two years he was assistant forester in the Dominion Forestry Branch located in Alberta. Mr. Edgecombe was at first engaged in the survey of the Rocky Mountain Forest Reserve and later as supervisor of the Brazeau and Athabaska Forests. Leaving the Dominion service, he joined the staff of the British Columbia Forest Branch in July 1912 as district forester, Tete Juane district. He was later moved to the headquarters staff in Victoria and was engaged in making valuation surveys in the forests of the Coast. Mr. Edgecombe enlisted in 1915 and got overseas in February 1916 as lieutenant in the 3rd Divisional Field Artillery, returning June 1919 as captain (acting major) after a long and creditable service. He was in the Somme, Vimy, Hill 70, Paaschaendale and Amiens offensives. Since his return he has been engaged in the survey of the forest resources of Ontario for the Commission of Conservation but his permanent appointment as Surveyor of Forest Resources has just been secured. His work so far has been confined mainly to the Ottawa River Drainage area.

Lumber for Big Convention Hall

Approximately 300,000 feet of lumber was used in building extra seats, platforms, etc., in the mammoth Coliseum, Chicago, where the Republican National Convention met the first week in June. The lumber was yellow pine, Norway pine and white pine, and furnished by the Edward Hines Lumber Company of Chicago.

Deliver the Goods

The world will buy largely of any one who
Can deliver the goods.

It is ready and eager to barter if you
Can deliver the goods.

But don't take its order and make out the bill
Unless you are sure you'll be able to fill
Your contract, because it won't pay you until
You deliver the goods.

The world rears its loftiest shafts to the men
Who deliver the goods.

With plow, lever, brush, hammer, sword, or with pen
They deliver the goods.

And while we their eloquent epitaphs scan
That say in the world's work they stood in the van
We know that the meaning is, "Here lies a man
Who delivered the goods."

And rude or refined be your wares, still be sure
To deliver the goods.

Though a king or a clown, still remember that you're
To deliver the goods.

If you find you are called to the pulpit to preach,
To the grain-fields to till, to the forum to teach,
Be you poet or porter, remember that each
Must deliver the goods.

—Nixon Waterman.

Gigantic Merger of Pulp and Lumber Concerns

Extensive Enterprises Will be Carried Out by United Interests in Developing Pulp and Paper Industry and Water Powers of the Gatineau Valley

By the consummation of the greatest pulp and lumber merger ever attempted in Canadian lumbering history, involving a purchase sum of \$60,000,000, the holdings of four, and particularly the possessions of two of the first six biggest lumbering companies in the Ottawa Valley, passed from their former owners, W. C. Edwards and Co., Gilmour-Hughson Company, The Kipawa Company, Limited, and the Ticonderoga Pulp and Paper Co., to the Royal Securities Corporation, and from the Corporation to the Riordon Pulp and Paper Company, Montreal, which are their present owners.

Official announcement of the transaction, which has been pending since the beginning of 1920 or before, was made during the closing days of May, and with it the inclusion of four instead of two companies, revealed the fact that one of the greatest pulpwood and lumber tracts, to come under the control of one company in America, if not in the world, had been accomplished. Virgin and almost untapped tracts of woodlands, prized for generations for their excellence, were swept in the final hours of the deal, from the ownership of those, or the kin of them, who had controlled them for many generations, into the hands of the Riordon Company. With the passing of the limits, those owned by Booth, McLachlin, and some held by the Hawkesbury Company, stand out like a beacon light, as representing the industry and energy of the pioneers in the lumbering industry in the Ottawa Valley.

Names of early lumber operators, who have long since passed into the great beyond, excepting perhaps John R. Booth, are recalled with the announcement of the merger, and though the commercial possibilities of the completion of the transaction appear sound and great, there is a keynote of regret that the limit holdings of some of the oldest lumbering barons in Canada, have passed to one of the leading and most modern and efficient companies in the manufacture of pulp, paper, sulphite, and lumber—the Riordon Company.

Develop Pulp Resources of Gatineau

Some changes in the already announced details are, so the Canada Lumberman has been given to understand, are to be made, but from what could be learned they will principally effect the cutting operations in the Gatineau Valley and the conversion, manufacture, and distribution of the wood on the limits already acquired. It is proposed to open up the pulp resources of the Gatineau district.

From the nature of the woods (or the principal percentage of it) it appeared very obvious that steps toward the erection of a new pulp and paper mill situated in or around Ottawa, had to come. The new owners were going to enter the lumber manufacturing field at Ottawa. The name of W. C. Edwards and Co. will live, but its

commercial operations will be that of only wholesale selling. The entire manufacturing plant, including sawmill, sash and door factory, box factory, and other woodworking plant units, with adjacent piling grounds, covering over 20 acres, and known as the "Sussex street" or "New Edinburgh plant" of the Edwards Company, was purchased outright by the Riordon interests. The property includes power rights, buildings and lands formerly used in the operation of the W. C. Edwards Company.

The plant is easily one of the most modern in Eastern Ontario, employs over 1,000 workers, and has an unofficial estimated valuation of \$1,000,000. The plant will continue to operate as a unit. Even the offices formerly occupied by the Edwards company are to be vacated by their former owners. Indications were that the Riordon interests intended establishing their Ottawa headquarters about the mill and conducting at the start a business of manufacturing lumber, in Ottawa. W. C. Edwards and Co. retain the Somerset St. planing mill and two suburban yards.

With the closing of the transaction, Hon. W. C. Edwards, founder of the Edwards Company, ceases to figure actively in the manufacture of lumber. He is not a member of the W. C. Edwards & Company, though years ago he heaped up the foundation stones to form the monument which now bears his name, and will carry on through the ages, of Ottawa Valley lumbering history.

The name of the merged companies will be the Riordon Company Limited, and it has been officially announced that the chief purpose of the company is the development of the pulpwood resources of the Gatineau Valley.

Among some of the outstanding commercial facts in connection with the merger are:

Expenditure of \$30,000,000 in the Gatineau Valley district for the development of pulp and paper resources and their conversion into pulp or paper, within two or three years.

The continuance of the lumber industry in the Gatineau Valley.

The development of water powers in the Gatineau Valley.

The acquiring of twelve thousand square miles of pulpwood and timber limits, eight thousand square miles of which were formerly owned by the Gilmour and Hughson and W. C. Edwards and Co., and 1,200 square miles by the Kipawa Company Limited.

One hundred and twenty-five million feet board measure of annual pine lumber output.

One billion, two hundred million feet, of standing pine.

Twenty-five million cords of pulpwood.

One hundred and fifty thousand horsepower of developed and

General view of Mill No. 1 of W. C. Edwards & Co., at Rockland, Ont., founded over fifty years ago

W. C. Edwards, Ottawa, Ont.

Gordon C. Edwards, Ottawa, Ont.

Carl Riordon, Montreal, Que.

Ward C. Hughson, Ottawa, Ont.

undeveloped water power, of which 50,000 h.p. is on the Quinze river and was formerly owned by the Bronson Company.

One of the most valuable holdings of white pine, under one control in the world.

Pulp and paper output of about 150,000 tons per annum.

One of the outstanding features of the consolidation of interests is that they will be financed and controlled largely by Canadian capital. The financing of the new project will be carried out by the Royal Securities Corporation, Montreal.

With the announcement of the merger, the following statement was issued by Senator Edwards concerning his company:

History of the Edwards Industries

The business of W. C. Edwards & Company, Limited, was established at Rockland, operations beginning in November, 1868. It was originally a co-partnership and was afterwards merged into a joint stock company. The original co-partnership was composed of William C. Edwards and James Wood, but John A. Cameron and John C. Edwards became partners of the firm in the autumn of 1871, the firm as then composed buying out the timber limits and mills of Cameron & Edwards on the Blanche river. In the first three years of the operations of the firm it owned no timber limits, but bought its supply of logs from small operators—which, under the conditions as then existing, was not a difficult task.

The first purchase of limits was on the Gatineau river in the spring of 1871, when 200 square miles of territory was purchased from Hamilton Brothers. Since that time further territory has steadily been acquired, and the holdings of the company to-day comprise approximately 5,000 square miles. The production of sawn lumber and the development of industries for its re-manufacture have steadily increased. The cut of lumber in 1869 was only 3,000,000 feet; whereas for several years past the average cut has been in the neighborhood of 85,000,000 feet per annum. Planing mills, sash and door factories have been added. The company has from time to time absorbed the interests of various other companies on the Ottawa river. For instance, in 1882 the entire holdings of John A. Cameron & Company, with their mills on the North Nation River, were acquired. Then in 1888 large holdings, in fact the entire limits then owned by Hamilton Brothers on the Gatineau river, were taken over. Again in 1895 the limits of James MacLaren & Company on the Gatineau and Temiskaming were acquired, and at the same time the mill property at New Edinburgh, Ottawa. These holdings together with numerous minor purchases, constitute the very large area already referred to.

At times during its many years of operation the company has necessarily had serious difficulties to overcome. For instance, the large and expensive mill which had been constructed at Rockland in the autumn of 1871 was completely destroyed by fire in June, 1875, together with the entire stock of lumber on hand and all the plant connected therewith, there being little or no insurance to cover the loss. This was the first considerable difficulty, and the general advancement of the firm has been fairly steady ever since.

Observance of Golden Jubilee

Again in 1907 a serious loss was sustained, when the entire property and all the lumber in the New Edinburgh yards were consumed by fire. At this period, however, the shock was by no means so overwhelming, and immediately reconstruction of a more permanent nature took place, concrete material being used.

On Aug. 23, 1919, the 50th anniversary of the founding was celebrated.

Not only have the W. C. Edwards & Company, Limited, been large manufacturers, but they have also been for several years considerable wholesale dealers in lumber, having an office in New York and connections in Burlington, Vermont, and Liverpool, England.

But in the march of events a period has been reached in the history of Ottawa river lumbering when for the best conservation of the timber and development of the resources on the various limits, it becomes desirable that there should be some limitation in pine production, and utilization of the large pulp and paper resources. The breakdown in physical condition of W. C. Edwards, who from the first has been the sole general manager of the operations, has necessitated his retirement from the scene of his many years of management of the company's affairs. W. C. Edwards & Co. are disposing of all the property, except the wholesale branch, in which business they will continue; so that the name of W. C. Edwards & Company, Limited, as a factor in Ottawa's business life does not disappear.

For Economy in Production

It is understood by the sellers that the buyer, who is Mr. I. W. Killam, of Montreal, is to join this property and other properties which he has recently bought, in the great Riordon Pulp and Paper Company. For administration and economy in production this is, in the judgment of the sellers, a good and wise move. The Riordon Company are the pioneers in chemical pulp making in Canada. They have had a long and valuable experience, have a competent and high-class staff, and are well and strongly established on the Ottawa river, and under the new arrangement will certainly possess one of the most efficient and enduring operations for the production of pulp and paper in the Dominion of Canada. But this is not all. It is possible for them to produce white pine lumber for many years to come, and their possibilities in water power development and in the production of hardwood lumber, and chemicals to be made from hardwood, are very large indeed. The whole enterprise combined should make one of the very best organizations in these directions in the world.

While the severance from W. C. Edwards & Company of a very large and most valuable property and a business which has taken many years of toil and study to evolve is necessarily a matter of extreme regret, because of long and intimate association, at the same time it is firmly believed that the future interests and welfare of this portion of Canada will be best served by the transaction which has recently gone into effect.

Edwards Company Continuing as Wholesalers

The limits formerly owned by the Edwards Company are principally situated on the North Nation, Demonines, Colongue, Blanche, Kipawa, Temiskaming and Gatineau rivers. The greater part of them is made up of white pine, and most of the remainder red pine and spruce. There is also some hardwoods.

This company for several years past has been the leading producer of lumber and lath in the Ottawa Valley, and for several years past has manufactured between sixty and eighty five million feet of lumber. In the 1919 season it manufactured 60,000,000 feet of lumber and eleven million pieces of lath, and nine million pieces of shi-

gles. In 1918 it manufactured 65,000,000 feet of lumber and in 1917 seven million feet more. The company employs over one thousand workers in its mills at Ottawa, and about twice this number at its Rockland mills. For many years past it has been a much larger producer of lath and shingles than the Riordon Company.

The plant includes one of the most modern and up-to-date saw-mills and woodworking factories in Eastern Ontario and also a sash and door factory, box factory, planing mill, etc. The merger will not effect the positions of the employees of the company.

Gilmour and Hughson Operations Reviewed

The Gilmour and Hughson Company is the result of lumbering operations commenced nearly a century ago by John Gilmour of Scotland. This company has since then been a close corporation and at the time of the merger was exclusively controlled by the members of the Gilmour and Hughson families.

John Gilmour Jr. died in 1912 after which he was succeeded in the company by Mr. W. C. Hughson, formerly of Albany, N. Y., who at the time of the merger was a half partner in the business. This company from the commencement of its operations engaged in the manufacture of lumber. It owned extensive limits, which in the early days greatly exceeded those of the Edwards Company. Part of these limits were later purchased by the Edwards Company. At the time

D. G. Gilmour, Ottawa, Ont.

C. B. Thorne, Hawkesbury, Ont.

of the merger of the company owned about 3,000 square miles of limits, some of which have been in its possession continuously for upwards of one hundred years, and are situated principally in the Gatineau district. They are mainly composed of white pine, red pine, and spruce, the distribution of the pine grades being about sixty per cent., and spruce forty per cent. The mill is situated almost at the junction of the Gatineau and Ottawa rivers. In 1919 the plant produced 20,000,000 feet of lumber, in 1918 22,000,000 feet and the year before 25,000,000. Last year it was the fifth largest producer of lumber in the Ottawa Valley and was sixth the year before. Its lath output runs around three and one-half million pieces annually and in 1918 it manufactured 1,000,000 pieces of shingles.

In the early days of the company it sold most of its product in the English market and manufactured deals. For the last fifteen years it has not been manufacturing deals and now disposes of the greater part of its output in the United States. The company employs 200 men about its mill in the summer months and about 1,100 in wood camps during the winter. Mr. W. C. Hughson is president and Mr. D. G. Gilmour, lumber broker, vice president.

The Gilmour and Hughson Company like the Edwards plant will continue to manufacture lumber. Mr. Hughson and other officers and officials of the company will for the present, at least, retain their active positions with the firm.

The Kipawa Company, a subsidiary of the Riordon Company, is situated in the Temiskaming district, and was formed in 1913. Riordon engineers after making a close study of the territory considered it the logical spot to locate a pulp mill. The property was purchased five years later and the construction of the first unit having a capacity of over one hundred tons of bleached sulphite pulp per day was begun. The plant began to produce last year. The company owns about 1,400 square miles of limits, and 20,000 h.p. is available the year round. Thirty five thousand horse power could be produced if conservation work was undertaken. The power leases run for 75 years.

Mill No. 2 of the Edwards industries at Rockland, Ont.

Mr. C. B. Thorne, technical director of the Riordon Company, personally planned and directed the design and construction of the plant. The general plan is such that units of one hundred tons capacity can be added to the present plant. A second 100 ton unit is now under construction, and it is expected that within a few months the plant will be turning out 300 tons of pulp per day. The cost of the plant is in the neighborhood of \$15,000,000. A model townsite has also been provided for, around 200 community houses.

Great Gathering of Empire Foresters

A number of Canadian foresters are leaving this month to attend the Imperial Forestry Conference in London, England, which takes place July 6th to 17th. Among these are Clyde Leavitt of the Commission of Conservation; Roy Cameron, Dominion Forestry Branch; M. A. Grainger, chief forester, British Columbia; Robson Black, secretary Canadian Forestry Association; and it is expected Avila Bedard, assistant forester, Quebec. W. B. Stokes, of the Forest Products Laboratories of Canada, will have charge of the exhibit of Canadian woods and wood products. The attendance of these representatives from Canada and the excellent exhibit which has been prepared will do much to advertise the forest industries of Canada throughout the Empire.

They Will See Some Big Timber

Representative western newspaper men were recently in the east to attend the annual meeting of the Canadian Press Limited, and partly in connection with arrangements for the coming Imperial Press Conference. The British journalists will spend three days in Alberta, and from that province will be taken into British Columbia, where they will spend eight days. They will see how logging is carried on among the big trees along the Capilano. They will also be shown other famous scenes and various beauty spots on Vancouver Island.

The Southampton Lumber Company Company, Ltd., has been incorporated to carry on and operate a general lumber business in all its branches, including logging, driving, sawing, manufacturing, shipping and selling of lumber. Frank D. Swim, Alexander Storey and Everett J. Weaver, of Doaktown, constitute the company, the capital stock of which is \$48,000, and their head office will be in Doaktown, N. B.

The sawing plant of Gilmour & Hughson, Hull, Que.

Hammond Co. Have Model Mill

The Hammond Cedar Company, Ltd., has recently completed important additions to buildings and machinery at Port Hammond, B.C. It is now a cedar mill throughout, and represents the last word in up-to-date equipment and economical management. The company is employing over 110 men, with probable additions in the near future, and efforts are being made to satisfactorily solve the housing problem for the employees. With this end in view the Dale property, less than a quarter of a mile from the mill, has been purchased, containing fourteen lots, upon which married employees are encouraged to erect their own homes. One eight roomed house occupies a corner site there, leaving space for an additional six houses, each having a double lot. The dwelling formerly occupied by the manager of the Bank of Hamilton branch has also been purchased as a mill home.

The rebuilding of the plant has effected notable improvements. A sawmill 270 feet by 50 feet houses log-haul, double circular head rig for breakdown, using 60 in. saws, heavy carriage with gunshot feed, and Hill "niggers." Also a Wickes gang, Gidding and Lewis gang. Watrous pony band mill and carriage, two edgers, one ten saw automatic air trimmer, and live rolls. A shingle block cut-off and automatic loader is installed, with steam feed, operated by one man. A new Summer log turner is being put in, also log stop and loader, and a new log-haul, and twin engines 16 by 20 will operate the head carriage. Practically the whole of the machinery is electrically driven, the Western Canada Power Company, as recently announced, having doubled the supply of juice for this purpose.

The lumber dry kilns have six tracks and fronting the kilns two sorting chains operate in a 90 foot by 106 foot building, so elevated as to allow trucks to pass beneath them. Direct loading of lumber from the sorting chains to trucks is a feature. After a spell in the cooling shed the lumber is lowered in truck loads to the level of the automatic feed table which supplies the planing mill. A Yates combination planer and re-saw dresses the lumber on four sides and re-saws at one operation, and the stock drops to transfer belts and so on to the trimmers, from whence transfer belts carry it to grader and tie-up men. Steel roller-bearing trucks convey the bundles to transfer cars, transferrable to any set of the tracks which converge at the storage shed.

The electrically operated planing mill is being equipped with a new fast feed Yates moulder, and has a Woods 6 x 16 in. moulder working now.

The 388 ft. by 170 ft. lumber sizer shed at the end of the range of the transfer chains is opposite the planing mill. It houses a Yates sizer and cut-off saw. In the shingle mill two storeys 115 ft. by 40 ft., three machines are working night and day to keep up with orders and six others are contemplated.

A lath machine and bolter for shingle bands operates in the shingle storage shed, 200 ft. by 56 ft., with transfer chains and trimmers, all electrically operated.

A well designed machine shop and smithy occupies the lower floor of the filing room 24 ft. by 48 ft., two storeys.

Four 66 in. by 16 ft. boilers rated at 150 lbs. pressure and fitted with Dutch oven feed occupy the 44 ft. by 43 ft. boiler house, and two new Vulcan boilers rated to 160 lbs. are to be installed shortly. Three conveyors deliver fuel to the bins.

Twin 14 in. by 20 in. engines, H. S. and G. drive the headsaws and Wickes gang, with separate engine for the shingle mill.

Six new kilns are planned. The fire protection organization includes a 1,000 gallon per minute capacity pump, five auxiliary pumps, twenty-one hydrants, with two openings connected with wrought iron main.

During the war this plant turned out more aeroplane timber than any mill in B. C., and earned high praise for the speed and quality of the product also.

Mr. D. M. Hartnell is manager of Hammond Cedar Co.'s mill, which has now a capacity of 80,000 feet per day, and occupies over two and a half acres under roof, and the Westminster Mill Company has an interest with Mr. Hartnell in the big business.

Future of Pulp Activity in West

Statistics compiled and published recently dealing with the manufacture, demand, and approximate estimates of the quantity of pulpwood available on this continent, make interesting reading, more especially in their relation to the present status and probable future growth of the pulpwood industry in this province. While the very magnitude of such an undertaking makes these estimates to a great extent simply a matter of guess work, they are the only statistics available until a more thorough survey has been made of this valuable resource, and in any event indicate in no uncertain manner the important position this industry occupies and is destined to hold for many years to come.

One interesting fact revealed by these statistics is that although forests are being turned into paper pulp at an increasing ratio, which far surpasses any increase in lumber cut in the past, there is still a very evident shortage of pulpwood, for not only manufacturing into paper, but for the other numerous uses to which it is put.

Until quite recently the pulpwood industry was centred in the east, on both sides of the line the forests there providing the raw material for the greater part of the continent and furnishing considerable also for export. But of late conditions have been changing. The fact that the forests of the east can meet the drain on them for only a limited time, and in the face of rapidly expanding markets, the centre of the industry has been drifting westward until now it is freely predicted that the near future will see the Pacific Northwest more especially that portion lying north of the international boundary, compelled to meet the demands from not only this continent, but also from other parts of the world.

Already the British Columbia mills are supplying the markets of the Antipodes, the United States, the Orient, South America, and in other quarters of the globe. But the immense market to the south of the line is by far the largest export market the mills of this country have at present, and will probably continue to be for many years to come. To-day two-thirds of the immense supply of print paper used by the American publications is imported or manufactured from wood or pulp having its origin in Canada. In 1910, the total quantity of pulpwood used in the United States for newsprint was 1,800,000 cords, of which 1,200,000 cords were imported from Canada.

Paper manufacture is a business requiring large invested capital, as is well evidenced by the huge expenditures made by those concerns producing paper in this province. Several millions of dollars are needed on each plant and this fact necessarily limits expansion of the industry, except in the case of those concerns already established. In this regard, the plants already established in British Columbia have been developed to the stage where they are the equal of any on the continent and are turning out a greater volume of product than any of the mills elsewhere.

But even this immense production cannot keep pace with the demands being made from all parts of the world and it will be but a matter of time before the largest producers of the east are forced to turn their attention to this section of the continent. The United States is now considering a national forest survey.

Yesterday is Gone

Wages wuz four bits a day,
Workin' section, pitchin' hay,

Back in '95,

Jes could stay alive;

Maw wore somespun, so did Sis,

Me and Paw did too,

First of March till Winter time,

Never wore no shoe.

You ought to see my Maw today,

Paw and Sister too,

Ridin' in a Marmom car,

Painted White and Blue,

Drop stitch stockings ev'ry day

Furs and silk and sich,

Forgot the time that me and Paw

Dug that Railroad ditch.

Meat she wuz 4 cents a pound,

Back in '95,

Taters rotten in the ground,

"Jes could stay a live"

Bread and lasses, Milk and Eggs,

Cheap as cheap could be,

Want some sweet stuff? take an ax,

Rob a Honey tree.

Meat she's now one plunk a pound,

Taters gone sky high,

Never see no milk around,

Substitute sez Si,

Prices soarin all the time,

People livin fast,

Never savin one small dime,

Yesterday is past.

—J. J.

Troublesome Small Pulleys

Have you trouble getting belts flexible enough for small pulleys, yet strong enough to last?

Goodyear has produced Extra Power Belting—belting flexible enough that it need not be too tight! Gripping enough to prevent slipping at any speed!

For this is 5-point belting.

1. It is extremely strong, because of specially-designed, properly-woven fabric.

2. Yet it is very flexible, for it

is not stitched, but is welded together with high-grade rubber, forced through and through the fabric and surrounding every thread. It hugs even small pulleys.

3. It has a friction surface which grips, dry or damp, and needs no dressing.

4. It has a seam sealed tight with high quality rubber.

5. The same rubber which gives Goodyear Extra Power its flexibility, prevents ply separation, even when the edge is worn or torn by shifters or accident.

The list of satisfied users of Goodyear Extra Power Belting on small pulleys is very great—too long to print here. But a few are:

O'Neil Morkin Machinery Co., Edmonton, Alta.
MacEachern Milling Co., Wexford, Alta.
Silver Standard Mining Co., Ltd., New Hazelton, B.C.
Hollinger Consolidated Gold Mining Co., Timmins, Ont.
Tilbury Flour Mills, Tilbury, Ont.
Chisholm Milling Co., Toronto, Ont.
Essex Canning Co., Essex, Ont.
Borden Cutter Tool Co., Windsor, Ont.
Brechin Roller Flour Mills, Brechin, Ont.
Nipissing Mining Co., Cobalt, Ont.
St. George Pulp & Paper Co., St. George, N.B.
Ungar's Laundry & Dye Works, St. John, N.B.
Ganong Bros., St. Stephen, N.B.
Robb Engineering Works, Amherst, N.S.
Ed. Sinclair Lumber Co., Newcastle, N.S.
O'Brien, Limited, Nelson.
Dominion Pulp Co., Chatham.
Richard's Mfg. Co., Campbellton.

Any one of these firms will be glad to tell you of their experience with Extra Power. Or a Goodyear Belting man will call without obligation to you. Phone, wire, or write the nearest branch.

The Goodyear Tire & Rubber Co. of Canada, Limited

Branches—Halifax, St. John, Quebec, Montreal, Ottawa, Toronto, Hamilton, London, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver. Service stocks in smaller cities.

Superior Mfg. Co., Ltd.
93 Church St., Toronto

Sale of Lumber by Tender

Sealed tenders will be received by the undersigned up to Wednesday, the 23rd day of June, 1920, at the hour of 12 o'clock noon, for the purchase of a quantity of dry lumber consisting of approximately 400,000 feet of White Pine, 250,000 feet of Norway Pine, common and dressing grades, Spruce, Red American Oak and Birch.

The above lumber is of various grades and sizes and may be seen and inspected on the premises of the Department of the Soldiers' Civil Re-establishment, Speedwell Hospital, Guelph, Ontario.

The above lumber was purchased by the undersigned, subject to Government Inspection and grading, and will be sold by the undersigned subject to the same conditions and the said Government Inspection and Grading will be final as between the purchaser and the undersigned, but purchasers will be at liberty to have their own inspector go over the lumber with the Government Inspector, at time of loading.

Tenders will be received for any grade or for all grades and for any quantity not less than one car-load. Prices must be for board measure, f.o.b. cars, Guelph, Ontario, and subject to sight draft against Bill of Lading.

Each tender must be accompanied by a certified cheque for 10% of the amount of the tender made payable to Torno Lovitz Lumber Company. These cheques will be returned to the unsuccessful tenderers when the contracts are awarded. The cheques of the successful tenderers will be retained until the completion of the contract as a guarantee of the proper execution thereof and will be subject to forfeiture in the event of the purchaser's default.

The highest or any tender not necessarily accepted

Purchasers must give shipping instructions to the undersigned within five days after acceptance of tenders.

A complete list of the said lumber may be had upon application to the undersigned at Room 200 Crown Office Building, Toronto, on personal application or upon request by mail.

DATED at Toronto, this 1st day of June, 1920.

PINE, SPRUCE
or HARDWOOD
LUMBER

To the Mill Man—I'm always in the market for Lumber, Shingles and Lath.
Please mail lists of your stock

Wanted

Owner of first class portable saw mill to cut nine thousand Pine and Spruce Logs, sixty foot average, now in the water in the Township of Coleman, three miles from Kerr Lake Siding, near Cobalt. Good wagon road. Write James Halliday, Gillies Depot, Ont., or Gillies Bros., Limited, Braeside, Ont. 10-12

Unusual Opportunity

For Sale Cheap—Water power in the Village of Kagawong, summer resort, surveyed by New York engineers and later by Detroit Engineers and the Hydro people, certified by the Robt. W. Hunt & Co., of Chicago, estimated 2,000 H.P.

An excellent opportunity for a cement proposition. There is an unlimited quantity of cement rock adjacent to power and some 120 ft. above level of bay there is ample room for plant and docks, together with 20 rods of water frontage.

Also the greater part of the Village of Kagawong with most of the adjoining lands, lumber, shingle and planing mill. Heavy American Standard Oil drilling outfit, store, farm and other buildings, 400 acres of sheep ranch, about 1500 acres of timber lands with natural gas for heating and lighting in logging camps. Other timber handy to purchase, also 610 acres in the vicinity of Gore Bay.

Object for selling, advanced in years.

JAMES CARTER,
10-12 Kagawong, Manitoulin Island.

Miscellaneous

For Sale

3½-ton Acason Motor Truck, nearly new, with new tires. This truck is equivalent to five teams of horses at any kind of work. Guaranteed in first class condition. Free trial, price and terms arranged.

HALL BROS., LTD.,
11 Toronto, Ont.

Thirty Causes of Failure in Business

It has been said that business success is not so much dependent upon any two or three kinds of ability as upon a complete organization of some fifty activities. So failure seems to be brought about by numerous lapses. The following thirty were given in an exchange:

1. He did not believe in bothering his head to remember his customer's name.

2. He saw no reason why he should speak to a customer whom he happened to meet on the street.

3. He reasoned that he could not expect to sell everybody, every time, and so he never troubled himself to offer to get an article, if what was wanted was not in stock.

4. He couldn't understand why it wasn't just as well to send his monthly statements out the third or fourth, as to be in such a rush to get them into the mails the first business day of the month. He looked upon such promptness as betraying almost indecent haste.

5. He looked upon his windows as places through which the light came in. So long as they didn't look bare, he didn't worry about them. He never had any special purpose in putting certain lines in, other than to fill up.

6. He didn't believe in taking inventory.

7. He thought an inexperienced girl could figure his accounts as well as an experienced book-keeper.

8. He never troubled himself to attend get-together meetings of local business men.

9. He had no definite hour for opening or closing.

10. He never bothered with his discounts, because he thought they didn't amount to enough.

11. He was not always particular about answering business letters promptly, even when they had to do with overdue accounts.

12. He saw no reason why he should take time to write a letter of explanation to a firm if he were not able to make good on a promise.

13. He gave credit rather freely, without any definite means of looking up the financial standing of his charge customers.

14. He was inclined to be over urgent with good-paying customers, because he had to have money from somewhere.

15. He allowed his help to take advantage of him, because he joked and laughed with them some days; at such times they thought he was a good fellow. When he didn't feel well, they referred to him—behind his back, of course—as a grouch, and took it easy when he was out of sight.

16. He was always just a little behind other merchants with his window displays of seasonable articles.

17. He never thought to link up his advertising and his window displays.

18. He was confident that the world had it in for him, and no matter how hard he tried, he wouldn't succeed anyway.

19. He never read any trade literature, because he said he didn't believe in the hot air of arm chair advice.

20. He didn't draw a regular salary himself, but charged himself up with whatever cash he and his family needed—or thought they needed.

21. He was always ready to mark goods up, but never ready to mark them down, no matter whether they were shelf worn or out-of-date. His theory was that if he couldn't get what the goods cost, he was better off to keep them.

22. He didn't trouble to take a lease, and so he had to move.

23. He didn't realize that his credit was as valuable an asset as money in the bank.

24. He didn't realize that self-possession was the best of all possessions, and so when he did not feel well or was worried he was irritable and crusty with help and customers.

25. He didn't realize that he had two disagreeable habits which were a disposition when he was nervous to pick his ear, and the other was to draw his breath in with a muffled whistling sound.

26. He was not particular

about his grooming, and so he did not look prosperous.

27. He never could appreciate the fact that perfection is made up of trifles.

28. He often forget his promises and disappointed his customers.

29. He seldom used promotion methods to win new customers. He took it for granted that people would put up with his eccentricities, and hunt him up to patronize him.

30. He failed because he didn't deserve to succeed.

The Salesman

The salesman is a necessary factor in every successful business. Especially is this true of the salesman who goes out from his headquarters to call on the public.

You may not think so at once, but if you stop to consider the salesman's place in our domestic economy, it may give you another thought.

In large measure, the prosperity of the country depends upon the men who sell goods.

Many a factory or business house would come to a standstill if it did not send representatives into the field to tell the public the merits of its merchandise. The salesman is the pioneer of business, the missionary of trade, the advance agent of prosperity. When he calls on you give him a minute or two, that he may tell his story. What he has to say may prove to be of great value. You have all to gain and nothing to lose by listening to him for a moment.

The salesman's life is not an easy one. He is seeking to make his living. Wife and children are dependent upon him. He is engaged in an honest and honorable calling.

Don't give him the cold shoulder. He is the door-opener for trade. He can help you. Let him show you how.

If he succeeds, your profit. If he fails, you lose nothing.

Many a man who began with selling has become the master of

a big business. Selling taught him the gift of merchandising successfully. Welcome him, who may teach you things you ought to know.

It is a free education for you. He pays for it.—Leslie's Weekly.

Mill Plant has Record of Steady Advancement

Under the capable management of Mr. D. M. Hartnell, the Hammond Cedar Company's mill at Port Hammond, B. C., has reached soundly established success and has gained an enviable reputation for its products. In addition to being a first-rate lumber man, Mr. Hartnell is a tower of strength to the community he has settled in. He takes a keen interest in local affairs, is a prominent official of the baseball organization, and has done good work in furthering a housing scheme enthusiastically approved by employees of the mill whose destinies he so worthily directs, which should go far to making married men employed at the mill permanent and happy residents.

Since Mr. Hartnell transferred his activities from Clayburn, where he had been in business with his father, to Port Hammond, some six years ago, the history of the Hammond mill has been one of steady achievement.

Review of Current Trade Conditions

Ontario and the East

Conditions in the lumber market remain very much the same as during the past few weeks. A fair volume of trade has been reported in the case of the eastern stocks, and prices are holding firm. In fact there has been no radical change in values for some weeks now so far as spruce, white pine, hemlock and other Ontario softwoods are concerned.

There has been quite a slump in quotations on B. C. stuff, particularly shingles, the market for which seems to have become demoralized at present. Wholesalers report there does not seem to be any absolute reason for the cutting of prices except that when the embargoes were placed on Canadian cars entering United States territory, B. C. shippers at once began to put scores and scores in transit for the eastern market. A large number of those, which were destined for United States points, were switched. The result was an influx of "stock on wheels," the like of which has never been known in the history of the trade, and everyone started out to find a market for this stuff which had come through without loss of time and in such great volume. Every effort was made to sell the transit cars shortly after arrival as possible. As soon as a market begins to fall, buyers begin to be scarce. They get a sort of panicky feeling and although some real snaps are offered, there is a hesitancy about buying for fear that the other fellow may come in and get the lot a few dollars cheaper. However, conditions are righting themselves slowly but surely.

All mills in Ontario and the east are now in operation, and, while there is not a surplus of labor, still conditions are much improved over last season, although wages are higher at most points. It is reported that a few mills have had to let up owing to an insufficient supply of logs, but on the whole, driving conditions have been good and the new cut from several mills is now being offered by wholesalers. The first shipment of this year's dry stock in white and red pine, hemlock, etc., will take place about the middle of next month. Some plants got an unusually early start this season.

The demand from United States has slowed down a great deal and is not expected by some to pick up for some time as this is "Presidential election year." The local retail yards all report a fairly good business during the past month and have been allowing their stocks to become reduced owing to a desire to keep down investment in merchandise as much as possible. Several of them are now buying for immediate needs, while others are still pretty well stocked up. There is a great scarcity of 1½ in. and 1¼ in. white pine in both mill run, and No. 1, No. 2 and No. 3 cuts.

Hardwoods are holding pretty firm and the demand, particularly for the automobile trade, is decidedly active. Several small blocks have changed hands of late and everything is moving fairly satisfactory in the lumber line except that the car situation is not improving to any great extent. Embargoes still prevail at a number of points. The matter of increased freight rates on Canadian roads has been hanging fire for some time, although the carriers have been anxious to have a higher tariff brought into effect as speedily as possible. The impending decision of the Interstate Commerce Commission is likely to be followed soon by a similar move in Canada.

Shipments of southern pine and red and sap gum have been slow in reaching Canada, and local representatives declare that cars sent out three months ago are only now arriving. Under normal conditions the distances should be covered in from two or three weeks. The freight on all shipments of lumber from the United States to Canada has now to be prepaid. This locks up considerably more capital on the part of the consignor, especially when several carloads are weeks on the way. The rains in the south still continue and recent reports show that in Mississippi during May there were sixteen days of rain, and the opening week in June was one of constant downpour. This has added to the difficulties of logging and the roads are practically impassable.

While Southern mills have caught up to orders, they have not, by any means, reached the point of production which prevailed some two or three years ago. Building in the various towns continues to be quite active and more particularly so in the larger centres.

It would seem, according to the recent decisions of the Inland Revenue Department at Ottawa, that all retail lumbermen will have to pay the 1 per cent. tax on turn-over, the same as wholesalers and manufacturers. At first it was thought that all retail transactions were exempt but later interpretations of the new financial provisions bring those, who operate planing mills or sell to contractors and subcontractors, under the same clause as if they were in the wholesale or manufacturing line.

Reports from Manchester indicate that Canadian exporters of lumber are using that port to a greater extent than hitherto. One Manchester firm has recently placed an order for 25,000,000 cubic feet of white pine logs, for which the price was reported to be over \$1,000,000. Manchester interests state that that centre is being used largely as a timber receiving depot, and that distribution is made from there to the industrial territory of the north of Manchester.

Mr. Hilder Daw, an English authority on housing, writes in a letter to Thos. Adams, Town Planning Adviser to the Dominion Government: "I see no hope of house shortage being caught up, and there is a big field for Canadian firms sending over cut timber for house-building. An energetic combination of Canadian manufacturers shipping their own consignments should make money if properly represented here. I would like to co-operate with a sound enterprise."

United States

While there are some indications in various centres that trade is reviving and confidence in the future of the lumber industry being restored, business on the whole is quiet owing to the general tie-up in transportation, the excitement created by the political conventions and their outcome and the falling-off in building in many centres. It is announced that the railroad car situation is somewhat improved and that freight jams at various points have been loosened up. The heavy rains are continuing in the south and interfering to a large extent with production. Due to the trend of prices and the car shortage, a number of mills in the south and west have closed down completely. There is just now a combination of circumstances which seems to be operating against the trade as a whole at the present time, and this, along with the midsummer quietness, will not tend to revive conditions for a while.

Speaking of the building prospects, one eastern house says that prices are very unsettled and in some instances are coming down, and the structural situation is viewed with some anxiety.

Unquestionably, building is falling further behind and must come some time, but the combination of high prices, the financial situation and the lack of skilled and industrious labor, has discouraged any enterprises in the east except the skeletons of necessity. It is said that a normal building wave will not start until prices of all building materials have reached at least an investment level. At present, through speculation and manipulation, they are inordinately high in some items. Granted that building is way behind production, behind supply in some lines, still until labor and other manufacturing costs have been reduced to permit the sale of materials at lower levels, some cannot see big business.

There is a general disposition at the present time to think that the apex in prices has been reached and the feeling of uncertainty, which prevails in other commodities, has naturally had its resultant effect on lumber values.

The most encouraging feature of the present evolution is that there does not yet appear any visible signs of a financial panic, nor has there occurred any disastrous effect to legitimate business. Some speculators and gamblers have been nipped pretty hard and for the present are eliminated. The majority of people seem to be still intent upon spending not only their income but any accumulation more for luxuries, however, than for necessities. Now that money commands a higher rate of interest, there is a probability that business men and wage earners will have more of an incentive to save and invest.

Although the season has been backward, reports from all parts of the country indicate that unless something unforeseen happens, United States are going to be blessed this year again with a bountiful harvest. The amount of acreage being cultivated, while less than last year, is well up to normal times. The general introduction of modern improved farm machinery has been able to effectually offset the shortage in man power. In the Northwest particularly, the farmers are disposing of the grain that they held over from last year and accordingly have considerable surplus with which to buy luxuries and necessities. Not as many new buildings are being constructed as was anticipated, but far more alterations and improvements are being made in old buildings than had even been hoped for.

But the fact remains that the supply of hardwood lumber for the year is going to be light. With sales already ahead of last year's total business, neither mill men nor wholesalers are anxious enough to continue doing business to induce them to sacrifice. Strikes in

the northern hardwood producing field are cutting down production at the present time by about 50 per cent., and the southern mills are not cutting much, if any, more than that proportion of normal. This fact, taken with the other, that much lumber has been sold but not delivered, is sufficient support to prevent the market from slumping. More green lumber has been shipped this year than usual, indicating an urgent demand and a short supply. And, when users of hardwood lumber are able to unburden their warehouses of manufactured products they will be ready to get back into the market for added supplies of hardwood lumber.

Great Britain

There is a fair stock in Great Britain, and stockholders are willing to sell at prices cheap in comparison with those asked for the new goods. Therefore, as long as the old stocks last it will be practically impossible to get the higher figures which are necessary for the 1920 wood. Of course, certain sizes, such as deals, 2 x 7 in., 3 x 7 in., 3 x 8 in., etc., must be expected, as there are not enough of these in the country, but of small stuff there is probably sufficient for several months to be had. If, on account of finance and the high prices, the building and other trades do not expand quickly, it is more than likely that many firms will decide to sacrifice their goods rather than have their money locked up, or their bank worrying them to reduce their overdrafts. That a critical period is before the trade is clear to everyone, and it is not to be wondered that the greatest reluctance is shown to make further purchases, or to charter boats to bring more goods over at the present time.

When turning to the agents' section of the trade, however, we find a very different atmosphere, says "Timber." Shippers' agents simply laugh at the fears of importers. Their shippers, they say, are quoting higher and higher prices, and the opinion is that f.o.b. values have not nearly reached the top. With reference to this matter we would supplement the information which we received last week about the South African market. We have heard on excellent authority that £50 f.o.b. has actually been paid for Swedish deals, and that the deals were not sold alone, but were placed in conjunction with batten sizes at correspondingly good figures, viz., a £38 basis for 7 in. France is certainly a weak spot just now. She cannot purchase on account of the adverse exchange, and yet her needs are enormous, and the same applies in almost as great a degree to Belgium. This latter country, however, is recovering more quickly, and there has been a considerable improvement in the value of the Belgian franc.

With reference to the consumption in Great Britain, the prospects rest very largely on the building trade, and the Government is making further desperate efforts to get this into full swing. The putting a stop to the building of cinemas, and of what are known as luxury buildings, although it creates a good deal of dissatisfaction, must tend to leave more labor for small property buildings. We are quite aware of the objection that the two classes of work are distinct, and that the men who are accustomed to the construction of huge city blocks and large buildings will be like fish out of water when put on to cottage and small house work. The urgency of the housing question, however, is so great that we are inclined to support the Government's action in this matter, but the labor question will require very careful handling, and it is one of the most disquieting factors which merchants have now to face.

The freight market continues in an extremely interesting state. Increases in the export rates to Brazil, North America, South Africa, and the Far East are now in operation. Very little objection to the higher rates from merchants seems to have been heard of by the shipping lines. Representatives of one trade are known to have protested to the North Atlantic companies, but the cargo was such as shipping managers are not enamoured of, and from their point of view they would, apparently, almost as soon have been without it. As has been repeatedly explained, the rates which have lately been increased have been raised, after an interval of 12 months, to meet the higher costs which have occurred in the interval.

Ottawa Reports Business About the Same

Very little general change took place in the Ottawa lumber market during the opening period June, as compared with late May. The market on the whole was quiet, and while there was a certain amount of trading done, the volume was not anywhere near what had been expected. The shortage of foreign freight cars was given as one of the principal reasons for the decline in business.

American orders and inquiries became quieter if anything during the first ten days of June, and the outlook was that they would continue to be absent for some time. This, of course, is only a forecasted surmise, as at any time the market may take a decided change and brisk trading result. The indications point that there should be a fairly good domestic demand, especially for the building grades from now on.

Prices in all grades remained firm, and unchanged as compared

with late May. This was one hopeful symptom. It may be that the prices asked today are the peak prices that lumber will reach. On the other hand there are some who think that prices may go still higher. The new manufacturers' prices were not definitely announced. For the last three weeks, or ever since the sawmill season got under way, there has been a certain amount of "jockeying" as to prices. Taken all around, the new prices from the manufacturer to the wholesalers will show, at least, some increase over last year. The augmented cost of woods labor and camp supplies necessary in the getting out of the logs, and the increased cost of sawmill operations, it seems, is positively going to advance prices for this year.

On the other hand there are some that argue that without a good demand being present the manufacturers cannot very well advance their prices. Some sections of the trade point out that if manufacturers put the price of lumber too high that the wholesaler and retailer will stop buying, and hold off purchasing more stock in the hope that the manufacturers' prices will soften, or that the manufacturer will carry over a large portion of his cut.

The chief reason for the slackening of the demand outside of the shortage of foreign cars is to all appearances due to the progress being made in connection with building operations in the United States. The American yards buying from Ottawa Valley companies, it was pointed out, are believed to be fairly well stocked, with stocks they purchased during the later fall, winter or early spring months. Some were of the opinion that the yards had purchased these stocks in the expectation of an unprecedented building boom, which has apparently not been fully realized. Consequently the stocks have not moved as fast as was expected. On top of this so far as shipments go from the Ottawa Valley mills and companies, the car situation is a decidedly serious factor.

The situation as to European export for some reason which has not yet been explained did not seem to show anywhere near the activity that had been expected for it last fall. Whether it is the high ocean rates, or the adverse exchange, or some other reason that does not appear on the surface, the volume of business being done in this branch of the trade is not great.

The labor situation with the woodworking plants remained decidedly uncertain, and it would not be surprising if a strike was in progress by the time this appears in print. The members of the Inside Woodworkers and Factory Workers Union, some time ago presented demands to the employers asking for increased wages, a closed-shop, and that the union be recognized and the principle of collective bargaining be agreed to. The employers refused to recognize the union, but are willing that the men have a union if it so suits them. The manufacturers, so the "Canada Lumberman" has been informed on reliable authority, will not accept the principle of collective bargaining, which if effective would broadly mean that all plants would pay the same wages for a certain grade of work. They prefer to deal individually with their own employees.

The sawmill of James Davidson's Sons at Coulange had to close down early in the month on account of there not being sufficient logs at the mill to continue operations. Low water in the river and streams which bring the logs to the mill was the cause of the shortage.

One of the local hopeful signs for the future of the market is the May building permits, which promised more than half a million dollars worth of new buildings and construction work. The biggest permits include three warehouses which will cost \$57,000, a new lunch room that will cost \$65,000, a bank building that will cost \$75,000, an addition to the University of Ottawa costing \$18,000, and several fine residential homes, costing \$10,000 or more. In addition to the amount shown by the May building permits there was also the report that the University of Ottawa was to spend \$175,000 in the building of a new wing. With the official signing of the agreements between the different crafts embraced in the Building Trades Council and the Ottawa branch of the Associated Building and Construction Industries of Canada, in the last days of May, the outlook for building became improved and conditions from the labor end brightened materially.

Conditions with the sash and door trade amounted to about the same and the majority of the woodworking plants reported a good volume of business on hand. Nos. one and two white pine lath continued to remain off the market and there was very little trade in the other grades of this commodity. Shingles were only fairly active. Furniture factories continued busy.

A recent despatch from the Coast says that prices of logs have been falling during the past few weeks. Cedar logs, which were bringing from \$30.00 to \$45.00 per M have decreased in price about \$7.00, while shingles have dropped from 30 per cent. to 40 per cent. Fir prices have, however, remained pretty steady but the cedar market has gone flat.

EDGINGS**Ontario**

The property formerly occupied by Steele's planing mill in Smith's Falls, Ont., has been converted into a button factory.

The New Ontario Contracting Co. are erecting a new mill at Smith, Ont., which when completed will be operated by the Porter Lake Lumber Co., Ltd.

The planing mill of Allen & Cline, Picton, Ont., was totally destroyed by fire. The loss, which amounts to \$18,000, was only partially covered by insurance.

A fire recently caused \$5,000 damage to the planing mill owned by Mr. Samuel Lambert, Welland. There was no insurance on the mill. The cause of the fire is unknown.

The Switzer Sawmill Co., Shipka, Ont., via Dashwood was completely destroyed by fire entailing a loss of \$6,000. The company intend rebuilding and installing new equipment.

The plant of R. E. Truax & Co., Walkerton, Ont., narrowly escaped destruction when a large roller-skating rink on the adjoining property was wiped out. As it was, a considerable quantity of lumber and the company's stables were destroyed.

The St. Catharines city council has endorsed a proposal of the Chamber of Commerce to erect 50 houses. The city will guarantee 80 per cent. of the bonds of a company to be formed for that purpose. The houses are to cost \$3,000 to \$4,000 each.

The Davenport Lumber Co., Limited, Ottawa, was recently incorporated to conduct a general lumber and sawmill business manufacturing all kinds of forest products. Capital \$600,000. Two of the incorporators are C. E. Reed and T. B. Cole, both of Ottawa, Ont.

The sawmill of Samuel McChesney on Mattagami Lake, Ont., which was recently destroyed by fire after one day's operation, is again running. The buildings were rebuilt and new equipment installed within a month. This pretty nearly constitutes a record in construction.

The Hinkley, Moore Co., Limited, Sault Ste. Marie, Ont., was recently incorporated to manufacture and deal in lumber, timber and other forest products. Capital \$75,000. M. Hinkley and E. Moore, manufacturers, both of Benton Harbor, Mich., are two of the incorporators.

The Ontario Government has voted \$1,500 for aerial surveys of northern timber areas. It is the intention of the provincial authority to make larger proportions as soon as the trial surveys of one small area are over. If these are successful, the scheme will be carried out on a much larger scale.

The office staff of the Abitibi Power & Paper Co. at Iroquois Falls recently entertained the members of the office staff of the same company located in Montreal and North Bay. The visitors were delightfully entertained and taken out to camp No. 16 where they were regaled with a real shanty dinner.

The Beaver Board Co., Ltd., of Thorold, Ont., have bought the ground-wood pulp plant of the Foley-Rieger Pulp & Paper Co. at Thorold, and are now operating the same. The plant has a capacity of about twenty tons a day and the entire output will be used by the Beaver Board Co. in the manufacture of wallboard.

The Taft-Davis Lumber Co., Limited, of Ottawa, has been granted a federal charter with a capital stock of \$600,000 and authority to manufacture and deal in lumber, timber and other forest products. Among the incorporators are: A. M. Davis, lumberman, of Ottawa, and L. A. Kelly, barrister, Ottawa. The Taft-Davis Lumber Co. is a corporation to carry on a wholesale lumber business, with headquarters in the Capital.

The building inspector's department at Ottawa will make an inspection of all lumber yards in the Capital for the purpose of seeing if any of them are evading the civic bylaw in regard to having fences placed around them. The bylaw provides that a fence of a certain height shall be erected around each lumber yard. In the recent \$200,000 fire at the Shepard and Morse lumber yards, the yards were not fenced. In the event of it being found that other lumber companies have not got their yards fenced the city authorities will take action against them.

Fire recently destroyed over 1,000,000 feet of lumber in the yards of the Shepard & Morse Lumber Co. (Canada) Limited, at Ottawa. The damage done was estimated at \$200,000 and was said to be fully covered by insurance. The blaze broke out in what is known as the new yards located at the western section of Ottawa, and is believed to have been started by trespassers who were loafing among the piles of lumber. On account of the prolonged dry weather, the flames spread rapidly and the burned area covers a space of about two city blocks.

The Ontario Government has instructed that action be started against the Great Lakes Paper Co. for declaration that the company is bound to take power from the Hydro-electric Commission of Ontario. The announcement was made during a discussion on the hydro estimates, when one of the members wanted to know what were the government's plans in connection with the \$2,500,000 appropriation for power development in Nipigon. It was announced that the Mission site west of Fort William had been approved by the government as a location for the Great Lakes Paper Co. George H. Kilmer, K.C., counsel for the government, has been authorized to proceed with the case.

Eastern Canada

The partnership between Nadeau & Boisclair, sawmill men, Princeville, Que., has been dissolved.

Bush fires which commenced in the Gatineau Valley early in June, were largely extinguished by heavy rains which fell in and around Ottawa a few days later.

The Kamouraska Lumber Company, Saint Pascal, Que., have been incorporated to conduct a general lumber, timber and pulpwood business.

Capital \$149,000. Two of the incorporators are A. Pare and P. Poudrier, both of Black Lake, Que.

The Nashwaak Pulp and Paper Co., Blackville, N. B., are erecting a boarding house for their employees consisting of 22 rooms.

The large sawmill and lumber yard of M. J. Cote, St. Joachim, Que., have been destroyed by fire. The fire started in the engine room of the mill.

The Aubernaie, a wooden vessel of 1,500 tons, built for the French government, was successfully launched at the Davie Shipbuilding plant at Lauzon.

The Rimouski Lumber Co., Limited, Rimouski, Que., recently were granted a federal charter to manufacture and deal in lumber, timber and other forest products.

The Howard Smith Paper Mills Company have raised the dividend from 5 per cent. to 8 per cent. The directors announce the purchase of 470 square miles of pulpwood limits on the Gaspé Peninsula.

Forest fires which were spreading with great rapidity in various parts of New Brunswick have destroyed the sawmill of Smith and Doten, at Rollingdam, Charlotte County, with a loss of \$25,000. Fortunately there was only a small quantity of lumber in the mill yard.

Jean Codin, aged twenty years, an employee of the Donnacona Paper Co., Donnacona, Que., met with a fatal accident recently in the plant. His clothing caught in one of their machines and before he could be rescued by his fellow workers both feet were torn off and he died a few hours later.

C. A. "Gingras & Fils, Limitee, Sherbrooke, Que., were recently granted a provincial charter to operate sawmills, manufacture lumber, timber, pulpwood and other wood products. Capital \$45,000. C. F. Gingras, contractor, and E. Gingras, both of Sherbrooke, are two of the incorporators.

La Compagnie de Publication du Nouveliste, Limitee, Three Rivers, Que., was recently granted a provincial charter to manufacture and deal in wood pulp and paper. The company will also enter the publishing field. Capital \$50,000. J. A. Fraser and J. A. Juneau, accountants, both of Quebec City, are among the incorporators.

John Breakey, Limited, Breakeyville, Que., were recently granted a provincial charter to acquire as a going concern the firm known as the "John Breakey Registered." The new company will conduct a general lumber and sawmill business manufacturing and dealing in lumber and timber. The pulpwood industry will also be exploited. Capital stock \$8,000,000. G. D. Anderson and John T. Breakey, superintendents, both of Breakeyville, are the incorporators.

This year the Canadian Forestry Association is sending out two exhibition cars instead of one. The one car will go east to Gaspé Peninsula and will come back through northern New Brunswick and Quebec, while the other will visit the west. The exhibition car to go east contains a wide variety of exhibits including a model tree nursery, a model sugar bush, wood and forest manufactures, pulp products and paper cloth and clothes. There is also a good exhibition of forest protection devices including wireless telegraphs, forest telephone systems, etc.

Western Canada

Smith & Hutton's new shingle mill at Cloverdale, B. C., is now in operation.

The Alberni Shingle Co., which is an organization of returned soldiers, recently started operations at Port Alberni, B. C.

The first big forest fire reported this season broke out and raged in the woods near Tyee, northwest of Duncan, Vancouver Island, about the middle of May.

O. B. U. loggers' officials stated recently that 400 men had quit work at the Whalen pulp plant at Swanson Bay, demanding a \$5 minimum in wages and an eight-hour day.

Lawrence & Workman, sawmill owners, Stewart, B. C., have enlarged their output to 20,000 feet a day and have taken over new limits. Ultimately an export business is planned.

Among the recent incorporations in British Columbia are the B. C. Spruce Mills, Limited, of Cranbrook, capital \$1,000,000; Hammond Land & Timber Co., Limited, Vancouver, \$15,000, and Big Bay Lumber Co., Big Bay, \$100,000.

At a recent conference of the mill operators and producers in British Columbia an effort was made to stabilize the falling market for lumber products. The operators recently held a meeting and discussed the present unsteady condition.

W. M. Harrison, sales manager for Whalen Pulp & Paper Mills, Limited, Vancouver, for the past three years and previous to that associated with the purchasing department of the firm, has resigned and gone into business for himself. He has opened an office under the name of Pacific Pulp Limited.

Among the new companies recently granted a charter in B. C. are: Williams Logging Company, Ltd., \$1,000,000, Vancouver; Logan-Garlen Lumber Company, Ltd., authorized capital \$10,000, Victoria; Tynehead Lumber Company, Ltd., \$50,000, Vancouver; Douglas Fir Products & Shingles, Ltd., \$50,000, Vancouver; Deserted Bay Logging Company, Ltd., \$100,000, Vancouver.

At a meeting of the Mountain Lumber Manufacturers' Association, held recently at Calgary, the most important matter taken up was the new federal taxation which was 1 per cent. on lumber. V. R. Poole, secretary of the association, stated that the new tax would amount to between 30c and 60c per 1000 ft., according to quality. The present market situation was also discussed.

The Canadian Forestry Association has undertaken a new line of work, which is intended, if successful, to protect standing grain crops in the Western provinces and particularly on the prairies. It is the planting of trees on the prairies, Mr. Robson Black, secretary of the association, stated that it was not the intention to plant trees for the purpose of growing lumber or timber, but for the protection of the standing grain crops so as to form "wind breaks." In connection with the undertaking a special car for educational purposes left Ottawa for the west early in June. It was fitted out with a motion picture machine and had accommodation for one hundred persons. It is proposed to give educational motion picture shows on forestry at points along the route. The tour of the car will include the principal points in Manitoba, Saskatchewan and Alberta.

"By-Pass" Blower Systems

for green saw dust and wet stringy material

Material that usually clogs the ordinary Blower is handled easily and continuously by our "By-Pass" Blowers. No material passes through or around the fan. That is the big secret of "By-Pass" success. Slow speed and minimum power are other strong features. Write for literature and all details.

We manufacture and install complete systems

"HAMILTON" EDGERS

Dependable Accurate Saw Mill Machinery

*Used In
Scores Of
Mills All
Over Canada*

LEADERSHIP, after all, ascends to the fittest. Economy, service and value are the qualities which count.

The "Hamilton" imprint has been known for years as a sufficient testimonial for these merits.

"Hamilton" Garland Gang Edgers are especially recognized for their worth. They are strong, accurate and easily operated, made in all widths with necessary number of saws to suit requirements.

Let us get together when you are in need of anything for the sawmill.

We manufacture a complete line of sawmill machinery for either band or circular mills.

Dunlop Belting is Serving Faithfully in the Lumber Industry

It is a matter of record that wherever the "Two Hands" products go they serve faithfully and well. In the lumber industry, which is particularly trying on belting,

Dunlop "Gibraltar Red Special" Transmission Belting

is giving a higher percentage of satisfactory service than any other type. We have the facts to prove this statement.

We have a staff who specialize on Belt problems. You are welcome to their experience.

*Also makers of high-grade Packing
and Hose for all purposes and
every condition of service*

BRANCHES IN THE LEADING CITIES

To Wholesalers

WE ARE IN THE BUSH; THEREFORE

We can purchase any of the following stocks for you, on a commission basis, from Mills whom we deal with daily. BIRCH, MAPLE, SPRUCE, for this summer's delivery.

Also: PILINGS, RAILWAY TIES, and HEWN BIRCH TIMBERS.

OUR SPECIALTY

We Manufacture SPRUCE LATH AND BOX SHOOKS.

Prompt attention given to your requirements. Let us show you.

D. Blais & Co., Ltd.
Notre Dame Des Anges, Que.

FIRE BRICK

We make several brands of fire brick made by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best adapted fire brick for your boilers, dutch ovens, refuse burners, kilns, etc.

We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse, which enables us to ship at once.

We manufacture the following well-known brands:

"Elkco Special," "Elk Steel,"
"St. Marys," "Keystone" and "Rotex"

Write for copy of our catalogue,
"Refractory Efficiency Engineering."

No. 91 Planer and Matcher

THIS is the machine that has made good in working Yellow Pine. The peculiar texture of this wood makes it difficult to handle on an ordinary matcher, but the No. 91 takes care of it with neatness and dispatch. Above is shown feed-roll section with easy adjustments to provide the proper amount of "lead" for different classes of work. Get our Matcher Book for details. Sent free on request.

HURLBURT

MOTOR TRUCKS

**"The Best Truck Money and Brains
Can Build, Regardless of Cost."**

That is the idea back of the *Hurlburt Truck*.
Intrinsically it means:

An Overpowered Motor
A Frame of 95,000 lbs. Tensile Strength
Longer and Heavier Springs of Sil-
ican—Manganese Steel
A Brute of a Rear End
The Smaller Units of Equal Ruggedness
Skilled Workmen—Skillful Results
Clientele of Character
A Truck that Runs and Runs.

The first Hurlburt made eight years ago is still doing a full days work

The Carriage You Are Looking For

Our No. 1 Size

CARRIAGE—Has three head blocks, as shown in cut, usually set 9 and 6 feet apart, will be placed any distance apart to suit purchaser. Knees open 38 in. from saw, and is fitted with Knight or Peel dogs, as desired. Taper movement on each knee. 1 15-16 in. steel set bar with steel pinions and coil spring receder, and friction lever brake for stopping knees where required. Timbers are 5 x 6 in., or heavier if desired, well bolted and braced. Diameter of truck wheel, 12 in. Axles $1\frac{3}{4}$ in. diameter, and extend clear across carriage, are furnished with self-oiling bearings. Front block is fitted with timber rule, placed as desired; 54 feet of V and flat track furnished with each carriage.

SET WORKS—As shown in cut, is made up of ratchet wheel 12 in. diameter, 4 in. face, with set lever carrying 7 steel pawls of varying lengths; also, same number of check pawls set in quadrant. Both sets of pawls are disengaged from either side of carriage when required to recede knees. This is a positive set, without lost motion.

FEED WORKS—As shown in cut, consists of 16 x 12 in. drum, with spur gear keyed to shaft. Pinion or friction shaft in saw frame engages with this gear. Cable takes two or three turns around drum, and is passed around end sheaves and attached to carriage. We also furnish 26 in. drum with internal gear in place of 16 in. drum when desired.

DUPLEX TRUCKS

BUILT FOR BUSINESS

Duplex Limited Specifications

Capacity—Normal Load 3000 lbs. Maximum allowable weight including body 5000 lbs.

Speed—5 to 30 miles per hour on high speed. The Duplex Limited will attain and hold a speed of 25 miles per hour with a full load, and normal engine speed.

Motor—4 Cylinder enclosed type water cooled. Cast enbloc. Bore 4-inch, Stroke 5¼-inch, 3 Point Suspension.

Clutch—Multiple Dry Disc. 5 plates—9-inch diameter.

Transmission—Selective sliding gears—direct on high.

Electric Lighting and Starting—Westinghouse—with 15 am. hr. battery.

Carburetor—Stromberg 1¼-inch.

Gasoline Tank—Under cowl—gravity feed. 18 gallon capacity.

Cooling—Special Duplex design Radiator with cast tanks and finned head. Spirex core. 18-inch fan driven by 2-inch leather belt. Centrifugal water pump.

Oiling—Force and splash feed.

Final Drive—Worm.

Front Axle—Drop Forge I-Beam, 2½ inch deep.

Rear Axle—Straight or David Brown type of worm gear, with 5.51 ratio.

Springs—Semi Elliptic—front and rear.

Wheels—Heavy Artillery type—12 spokes 1¼-inch square.

Tires—Pneumatic Cords 35 x 5 front; 38 x 7 rear.

Wheelbase—145 inches.

Equipment—Windshield; Electric starting and lighting; Ammeter; Boyce Motometer; Speedometer; Electric Horn; Tools; Jack; Rim wrench. Front fenders; Alemite High Pressure Lubricating System; Driver's seat without extra charge. (Power tire pump at extra charge).

Duplex Four-Wheel Drive

3¼ Ton Capacity

America's Leading Heavy Duty Truck

The Duplex Limited

**A Wonderful, Medium Capacity, High Speed Truck
That is Establishing Remarkable Operating Records**

Pneumatic Tired—Full Electric Equipment—Speed 5 to 30 Miles per Hour on High with Full Load—Here is a Speed Truck that Can Really Stand Speed Work.

THE need of the day is quick, sure, economical transportation. Goods must be kept moving. The fastest truck is the most economical truck, of course. But speed must be coupled with mechanical ruggedness.

The difficulty that users of medium capacity trucks have had to face is the fact that the general run of speed trucks couldn't stand steady work. They racked and strained themselves to pieces too quickly.

The Duplex Limited was developed specifically to meet this need. As the result of our years of experience in originating and building the Duplex 4-Wheel Drive Heavy Duty truck we knew how to build trucks that last.

The Duplex Limited is today probably the smoothest running truck on the roads. Loaded to capacity it travels along easily and steadily and without strain. Its motor is so large, so powerful that maximum road speed is obtained with the motor turning over only at moderate speed.

The Limited was designed deliberately for speed. It was designed for pneumatic tires—and not merely equipped with them. No excessive vibration or shock or strain. It works easily and therefore wears longer.

It was designed and is built to work—not to travel empty. And it stays on the road—not in the repair shop. It is strong and rugged and safe for speed work as the famous Duplex 4-Wheel Drive is for heavy work.

The way it handles; its strength and ruggedness; its ability to keep going without tinkering—these are the reasons why the Duplex Limited is all over America meeting with a wonderful success.

Write us for folders which give mechanical details—and show its mechanical superiority. Ask your Duplex dealer to demonstrate the Limited. You'll get a new idea of motor truck value.

Solve your transportation problems with a Bell, Oil Burning Locomotive

A locomotive that will provide a speedy and economical means of lumber haulage, one that will work on inexpensive fuel, (kerosene, fuel oil, distillate or crude oils), and one that has a greater tractive power than a direct type locomotive of equal weight. In sizes 2 to 24 tons.

Small wonder that the "Bell" is in such extensive use when it embodies such wanted qualities.

Perhaps your haulage problems could be solved by an investigation into the merits of this greatest of all locomotives.

A post card will bring full particulars and entail no obligations.

Original "Dunbar" Machines

We are the original and the only makers of "Dunbar" Shingle Machines, Lath Machines, Clapboard Machines, Steam and Gasoline Logging Engines. Each is the best for its particular work. Are you using the best?

Lath Machine

From our many years of experience we evolved this "Dunbar" Original Lath Machine. Every improvement that could be suggested, every time-tested idea for the betterment of product and for greater speed, has been incorporated in this machine. We believe it has no equal, and there are a great number of mill men throughout Canada who share this belief with us. Carefully constructed of high grade materials and designed to work steadily under the hardest conditions.

Steam and Gasoline Logging Engines

Conditions in Canada necessitate an engine that will stand any amount of strain and hard work in the lumber industry. With this idea in mind we have brought out the "Dunbar" engines perhaps a little stronger than is really needed. They do their work easily and willingly, and stand a great amount of hard usage. Built entirely in Canada for the Canadian lumber trade.

Clapboard Machine

You will need no excuse for the quality of your product if you use the original "Dunbar" Clapboard Machine. Expert in every detail. This machine will give you the very best service under most trying conditions. It will turn out work without delays. It will need practically no repairs and will increase your output. We cannot recommend it too highly because it is giving this very service to lumbermen in all parts of this country.

Send for catalogues of any or all of these machines.

Would You Spend \$575 to Save \$2,000?

Last Fall a certain lumber concern in Ontario purchased a small 10 H.P. Double Drum Belt Driven Hoist from us for handling logs. This machine cost them \$550, plus \$25, freight, total \$575. They operated this small Hoist by a belt from a gasoline Engine, the whole making a light, compact, portable outfit, easily moved from place to place.

They were able to work this outfit in the coldest weather, and found that it did the work of three or four teams.

As it required only one man to operate the Hoist, it is easy to figure the daily saving effected by the use of this machine. In other words, compare the wages and board of one man and the cost of a little gasoline with the wages and board of four drivers and the feed and upkeep of eight horses.

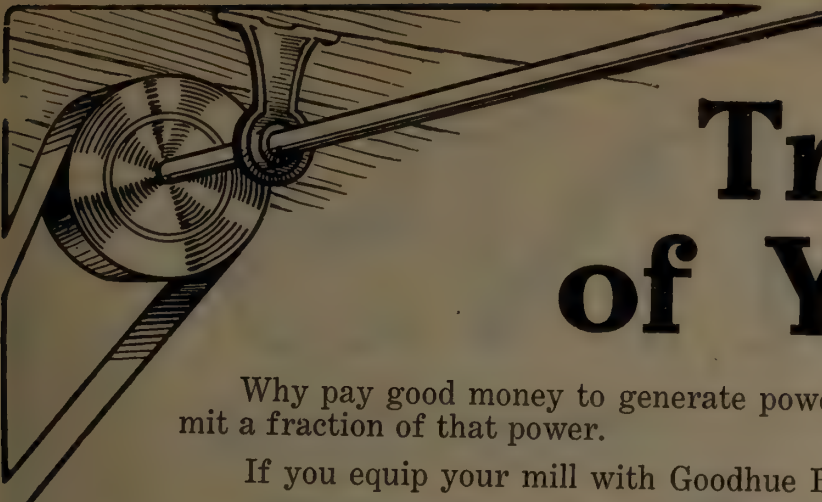

This machine handled up to one thousand logs per day.

We make these machines for either Steam or Gasoline Power, and in 7 sizes, one of which should be just right for your use.

Marsh Engineering Works, Limited, Belleville, Ont.

ESTABLISHED 1846

Sales Agents: Mussels, Ltd., Montreal, Toronto, Winnipeg & Vancouver.

Transmit 100% of Your Power

Why pay good money to generate power and then employ a poor belt that will only transmit a fraction of that power.

If you equip your mill with Goodhue Belts you can transmit 100% of the power generated.

Goodhue Belts stretch 15% to 25% less than other belts and have just the right amount of "cling" on the pulley.

CANADA LUMBERMAN

347 Adelaide Street West

TORONTO

THE ROOFING OF TO-DAY

In fact, they have already arrived:

In 1918 we doubled our output of Asphalt Slates over 1917, and 1919 was double that of 1918.

There is going to be a big and growing business in Asphalt Slates done by lumber yards. We have a number of lumber dealers now who are handling our line and finding it a brisk seller and a good profit earner.

Brantford Asphalt Slates

You will find it quite easy to sell this fire-resistant, economical, durable roofing material at the same time you are selling the lumber for the house, barn or other buildings. Brantford Asphalt Slates are permitted to be used in the congested districts of cities where the most rigid fire protection by-laws are in force. This is an advantage that adds greatly to their saleability.

In addition to this, Brantford Asphalt Slates add beauty to a building. They are in soft, harmonious red and green shades—and the crushed slate surface gives a roof a distinct and artistic individuality.

Brantford Asphalt Slates are easily handled and quickly laid. They are in Individual size shingles.

Brantford Asphalt Slab Slates are four shingles in one. They are particularly suitable for large roofs, because they save time and labor in laying and require fewer nails. When laid the roof has the same appearance as when covered with the individual asphalt slates.

Brantford Crystal Roofing is the same material in Rolls. It is a big seller for barn roofs.

We suggest that you put in a small stock to try out the line. Lumber dealers who have done so have found that Asphalt Slates do not conflict with their regular business. Instead they have found that being able to supply the Asphalt Slates gets them extra business.

We would like to send you samples, prices and information.

BRIDGEBURG, ONT., 140 Janet St.

An Easy Way to Save Money

A product which doesn't conform to exact specifications can't pass inspection in its own factory. A fraction off standard measurement will condemn an expensively made mechanism.

Although manufacturers are jealous in the inspection of their own products, they are losing dollars because they have not applied the same rule to the transmission of power in their factories. It's a losing game to let the eye, or guesswork, judge the efficiency of a belt's work. That is an engineering matter for a belting expert.

The Graton & Knight Standardized Series of Leather Belting, which contains the one right kind and size of belt for every class of drive, is a series standardized in its manufacture and in its application.

High quality leather belting put to work on an exact engineering basis means the highest economy in power transmission.

Graton & Knight belting experts will be glad to extend their services to any belt user who questions the present efficiency of his power transmission. G & K experts are men trained in the G & K laboratories and by long service in the field.

Write for our book "Standardized Leather Belting."

OUR STANDARD EDGER

This machine is powerfully constructed to meet the heavy demands required of it. The side frames are extremely heavy to ensure the machine being kept rigid while it also gives perfect alignment to the arbor.

The rolls, saws, arbor, arbor bearings and saw shifting device are all thoroughly dependable and in every respect up to the "Long" standard of efficiency.

With this machine we supply a front table complete, ready for operating with rolls, boxes, shifting levers, quadrant, wrenches, etc., also three rolls with boxes for rear table.

Let Steam Do Your Setting

The hardest worked employee in the ordinary Saw Mill is the setter. The handling of large logs calls for great muscular effort on his part, while his work on the smaller logs is almost equally laborious, as he has to put through a much larger number of them.

Every cut makes necessary a new adjustment of the log, which, in the absence of our Steam Set Works, is accomplished by a long throw of the hand lever. Before the end of his day's labor, the setter is usually exhausted. In many mills, the setter, because of the fatiguing nature of his duties, is not required to work for as many hours per day as the other employees.

All this is changed by our Steam Set Works, making the labor of the setter so much less arduous that he can do a full day's work. He is also enabled to set logs more quickly, thus increasing the number of

cuts that can be made in a given time; and the lumber produced is materially improved in quality and regularity. Instead of the sawyer being kept waiting for the setter—the usual condition in ordinary saw mills—the reverse is true, and the setter is usually waiting for the sawyer.

It goes without saying that the main purpose of a saw mill is to produce as much good lumber as possible, at a minimum cost. As the cutting capacity of the mill depends mainly on the speed with which the logs are handled, the importance of an appliance which will shorten the time required to move logs into position for the next cut, is apparent.

The considerable saving of time effected by the use of these Set Works, together with the greater exactness in the thickness of the lumber thus obtained, accounts for the rapid adoption of this machine by mill men.

WHY NOT WRITE FOR INFORMATION NOW ?

Here's Another Letter

McLean Machine Works,
Campbell's Bay, Que.

Dear Sirs:—

Having had fifteen years' experience as sawyer and used several makes of feed works, I must say the feed purchased from you is the easiest operated and without any special attention, giving excellent satisfaction in every way.

I would not use any other, and I recommend your feed works to any who are desirous of securing a feed that gives satisfaction.

We are sawing from 18 to 20 thousand feet per day, and are running 6½ inch feed and 15 gig without any trouble whatever.

THE O. A. LETTS LUMBER CO.,

Per O. A. Letts, Sect. Mgr.

FULL PARTICULARS ON REQUEST.

THE MACLEAN MACHINE WORKS, Campbell's Bay, Que.

**Not altogether what we
say, but what users say**

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs,
in calm weather, 30,000 in a head wind.
